

The Geography of the Snagboat *Montgomery*

This map shows the area where the *Montgomery* worked during her 52 years of service for the U.S. Army Corps of Engineers. Using an atlas find the following features on this map and label each.

1. The map shows portions of four states and all of one state. Figure out which states are shown and label each.
2. The *Montgomery* worked on seven rivers. Find each river on this map and label each.
3. The *Montgomery* is dry docked on the Tennessee-Tombigbee Waterway. Label the waterway on this map.
4. Two state capitals are shown on this map. Put a star beside each.
5. When the *Montgomery* was lifted from the Tennessee-Tombigbee Waterway, two large derrick cranes came up from Mobile Bay to Pickensville, Alabama, to do the work. Find Mobile Bay on your map and circle it. Using an atlas or map, label the larger body of water to the south of Mobile Bay.
6. Draw an arrow indicating which way is north on this map. Make sure you label the arrow with N so others will know its purpose.
7. Add Columbus, Mississippi, to your map.
8. If you live in a town shown on this map, circle it and label it My Home Town. If your home town is not labeled on this map, but is within the map's area, add it to the map by making a circle where it is located. Make sure to label it. If your home town is outside this map's area, draw an arrow indicating in which direction your home town is located. Then label that arrow so others will know its purpose.

Make sure you put your name on your map!
