1. For several years discussions on the productive use of the sand dredged from our deep-draft inlet channels have been taking place between representatives of PD and OP. It has recently been agreed that studies are necessary to develop plans for the near-shore or littoral zone disposal of such material at Mobile Harbor, Alabama, Pascagoula Harbor, Mississippi, and Gulfport Harbor, Mississippi. Since OP has concluded agreements for beach nourishment at all our Florida projects, such plans are no longer considered necessary there.

2. An initial allocation of \$10,000 is hereby made to EN-YD to prepare a time and cost estimate and schedule of obligations and expenditures for those studies considered necessary to develop plans for littoral zone disposal at the sites noted, to participate in study team meetings, and coordinate with other elements as needed. Charges should be made to CA299 07500 00006.
