Microbac Laboratories Inc.
List of Valid Qualifiers
July 25, 2017

Qualkey: AFCEE40

Qualifier	Description
*	Surrogate or spike compound out of range
*	This surrogate or spike analyte was diluted out.
>	Result is greater than the associated numerical value.
B	The analyte was found in an associated blank, as well as in the sample.
D	This analyte was quantified at a secordary dilution.
F	Found; the analyte was positively identified with concentration above MDL but below RL.
J	The analyte was positively identified, but the quantitation is an estimate.
M	Matrix effect; the concentration is an estimate due to matrix effect.
NF	This compound was not detected by library search.
NFL	No free liquid was observed for this sample.
NS	This compound was not spiked in the LCS, MS or MSD.
Q	One or more quality control criteria failed. See narrative.
R	Data may be rejected due to quality control deficiencies.
S	Field screening data
U	Undetected; the analyte was analyzed for, but not detected.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.

Microbac

Laboratory Report Number: L17041203 *(Revised)*

Report revised to remove 1,4 Dioxane.

Diane Short & Associates
CT Laboratories
1978 S. Garrison St
Lakewood, CO 80227

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Michelle Taylor – Client Services Specialist
(740) 373-4071
Michelle.Taylor@microbac.com

I certify that all test results meet all of the requirements of the accrediting authority listed below. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

This report was certified on July 25 2017

Leslie Bucina – Managing Director

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

There were no discrepancies.

Discrepancy	Resolution

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
00113829	H	2.0		1001891733610004575000778978192929	X
00113893	H	1.0		1002826033610004575000778978193340	X
00113761	H	2.0		1002826033610004575000778978193307	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	Yes
7	Were sample labels intact and match COC?	Yes
8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	Yes

1.0 Summary Data

1.1 Narratives

Login Number: L17041203
Department: Volatiles
Analyst: Anthony Canter

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: In the alternate source analyzed 4/24/17 on HPMS11, WG611320-12, Chloromethane and Dichlorodifluoromethane exceeded the limit for percent difference, biased high. In the alternate source analyzed 4/26/17 on HPMS17, WG611454-12, Trichlorofluoromethane exceeded the limit for percent difference biased low. In the same alternate source Dichlorodifluoromethane exceeded the limit for percent difference, biased high. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: In the CCV analyzed 4/29/17 on HPSM11, WG612121-02, the following analyte recoveries exceeded the limit for percent difference, biased low: Chloromethane. In the CCV analyzed 4/30/17 on HPMS17, WG612141-02, Acetone exceeded the limit for percent difference, biased low. In the CCV analyzed 5/1/17 on HPMS17, WG612249-02, Bromomethane exceeded the limit for percent difference, biased low. In the CCV analyzed 5/2/17 on HPMS17, WG612550-02, Acetone exceeded the limit for percent difference, biased low. In the same CCV, Chloromethane and Dichlorodifluoromethane exceeded the limit for percent difference, biased high. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: In the blank analyzed 4/28/17 on HPMS6, the following analyte recoveries were above the MDL but below

the RL: 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,4-Dichlorobenzene, Hexachlorobutadiene, and Naphthalene. The associated samples were non-detect for these analytes. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: For 1203-19, 20 MS, and 21 MSD, Trichloroethene recovery was low. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: None.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

METHOD

Preparation SW-846 5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: In the alternate source analyzed 4/24/17 on HPMS11, WG611320-12, Chloromethane and Dichlorodifluoromethane exceeded the limit for percent difference, biased high. In the alternate source analyzed 4/26/17 on HPMS17, WG611454-12, Trichlorofluoromethane exceeded the limit for percent difference biased low. In the same alternate source Dichlorodifluoromethane exceeded the limit for percent difference, biased high. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: In the CCV analyzed 4/29/17 on HPSM11, WG612121-02, the following analyte recoveries exceeded the limit for percent difference, biased low: Chloromethane. In the CCV analyzed 4/30/17 on HPMS17, WG612141-02, Acetone exceeded the limit for percent difference, biased low. In the CCV analyzed 5/1/17 on HPMS17, WG612249-02, Bromomethane exceeded the limit for percent difference, biased low. In the CCV analyzed 5/2/17 on HPMS17, WG612550-02, Acetone exceeded the limit for percent difference, biased low. In the same CCV, Chloromethane and Dichlorodifluoromethane exceeded the limit for percent difference, biased high. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: In the blank analyzed 4/28/17 on HPMS6, the following analyte recoveries were above the MDL but below

the RL: 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,4-Dichlorobenzene, Hexachlorobutadiene, and Naphthalene. The associated samples were non-detect for these analytes. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: For 1203-19, 20 MS, and 21 MSD, Trichloroethene recovery was low. All other acceptance criteria were met. Please see the applicable QC report for a detailed presentation of the failures.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: None.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low area counts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:	**Example**
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
July 25, 2017

Qualkey: AFCEE40

Qualifier	Description
*	Surrogate or spike compound out of range
*	This surrogate or spike analyte was diluted out.
>	Result is greater than the associated numerical value.
B	The analyte was found in an associated blank, as well as in the sample.
D	This analyte was quantified at a secordary dilution.
F	Found; the analyte was positively identified with concentration above MDL but below RL.
J	The analyte was positively identified, but the quantitation is an estimate.
M	Matrix effect; the concentration is an estimate due to matrix effect.
NF	This compound was not detected by library search.
NFL	No free liquid was observed for this sample.
NS	This compound was not spiked in the LCS, MS or MSD.
Q	One or more quality control criteria failed. See narrative.
R	Data may be rejected due to quality control deficiencies.
S	Field screening data
U	Undetected; the analyte was analyzed for, but not detected.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.

Microbac

Laboratory Report Number: L17100532 *(Revised)*

Revised report to exclude 1,4-dioxane.

Diane Short & Associates
CT Laboratories
1978 S. Garrison St
Lakewood, CO 80227

Please find enclosed the analytical results for the samples you submitted to Microbac Laboratories. Review and compilation of your report was completed by Microbac's Ohio Valley Division (OVD). If you have any questions, comments, or require further assistance regarding this report, please contact your service representative listed below.

Laboratory Contact:
Michelle Taylor – Client Services Specialist
(740) 373-4071
Michelle.Taylor@microbac.com

I certify that all test results meet all of the requirements of the accrediting authority listed below. All results for soil samples are reported on a 'dry-weight' basis unless specified otherwise. Analytical results for water and wastes are reported on a 'as received' basis unless specified otherwise. A statement of uncertainty for each analysis is available upon request. This laboratory report shall not be reproduced, except in full, without the written approval of Microbac Laboratories. The reported results are related only to the samples analyzed as received.

This report was certified on October 23 2017

Leslie Bucina – Managing Director

Record of Sample Receipt and Inspection

Comments/Discrepancies

This is the record of the shipment conditions and the inspection records for the samples received and reported as a sample delivery group (SDG). All of the samples were inspected and observed to conform to our receipt policies, except as noted below.

The following discrepancies were noted:

Discrepancy	Resolution
Sample ID: MW-163-ODLS-15. Both voa vials were received with the lids cracked but samples are intact. BRG	Client notified, please proceed. ALS
Sample ID: DR1-6A-LA-26. All 3 voa vials received w/headspace >6mm. BRG Sample ID: MW-100B-LA-26. 1 of 3 voa vials received w/headspace >6mm. BRG Sample ID: MW-21-LA-26. 1 of 3 voa vials received w/headspace >6mm. BRG Sample ID: DUP-6-LA-26. All 3 voa vials received w/headspace >6mm. BRG Sample ID: MW-165-ODLS-15. 2 of 3 voa vials received w/headspace >6mm. BRG Sample ID: PMW21-01-LA-26. 1 of 3 voa vials received w/headspace >6mm. BRG Sample ID: DUP-1-LA-26. 1 of 3 voa vials received w/headspace >6mm. BRG Sample ID: DR1-5-LA-26. 1 of 3 voa vials received w/headspace >6mm. BRG Sample ID: TB-1-ODLS-15. 2 of 3 voa vials received w/headspace >6mm. BRG	Client notified, when possible please proceed with analyzing vials without headspace first. ALS

Coolers

Cooler #	Temperature Gun	Temperature	COC #	Airbill #	Temp Required?
0017448	H	0.0		100189371091000457500078799301151 5	X

Inspection Checklist

#	Question	Result
1	Were shipping coolers sealed?	Yes
2	Were custody seals intact?	Yes
3	Were cooler temperatures in range of 0-6?	Yes
4	Was ice present?	Yes
5	Were COC's received/information complete/signed and dated?	Yes
6	Were sample containers intact and match COC?	No
7	Were sample labels intact and match COC?	Yes

8	Were the correct containers and volumes received?	Yes
9	Were samples received within EPA hold times?	Yes
10	Were correct preservatives used? (water only)	Yes
11	Were pH ranges acceptable? (voa's excluded)	NA
12	Were VOA samples free of headspace (less than 6mm)?	No

METHOD

Preparation SW-846 5030B/5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: Recovery above range was observed for Chloromethane in the ICV WG633150-12 analyzed 10/10/2017 on HPMS6. Outliers were not detected above the RLs in the associated analyses. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recovery marginally below range was observed for Bromomethane in the CCV WG633849-02 analyzed 10/13/2017 on HPMS6. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: All acceptance criteria were met.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: Samples 09 and 20 were received with cracked lids.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low areacounts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

U	Undetected; the analyte was analyzed for, but not detected.

Certificate of Analysis

2.1 Volatiles Data

2.1.1 Volatiles GCMS Data (8260)

2.1.1.1 Summary Data

Login Number: L17100532
Department: Volatiles
Analyst: Tiffany Bailey

METHOD

Preparation SW-846 5030B/5030C/5035A

Analysis SW-846 8260B

HOLDING TIMES

Sample Preparation: All holding times were met.

Sample Analysis: All holding times were met.

PREPARATION

Sample preparation proceeded normally.

CALIBRATION

Initial Calibration: For all compounds that yielded a %RSD greater than 15%, linear or higher order equations were applied. All acceptance criteria were met.

Alternate Source Standards: Recovery above range was observed for Chloromethane in the ICV WG633150-12 analyzed 10/10/2017 on HPMS6. Outliers were not detected above the RLs in the associated analyses. Please see the applicable QC report for a detailed presentation of the failures.

Continuing Calibration and Tune: Recovery marginally below range was observed for Bromomethane in the CCV WG633849-02 analyzed 10/13/2017 on HPMS6. Please see the applicable QC report for a detailed presentation of the failures.

BATCH QA/QC

Method Blank: All acceptance criteria were met.

Laboratory Control Sample: All acceptance criteria were met.

Matrix Spikes: All acceptance criteria were met.

SAMPLES

Internal Standards: All acceptance criteria were met.

Surrogates: All acceptance criteria were met.

Other: Samples 09 and 20 were received with cracked lids.

Manual Integration Reason Codes

Reason #1: Data System Fails to Select Correct Peak. In some cases the chromatography system selects and integrates the 'wrong peak'. In this case the analyst must correct the selection and force the system to integrate the proper peak. Other times the system may miss the peak completely.

Reason #2: Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak. This phenomena is common at low concentrations where the signal:noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low areacounts for the target compound.

Reason #3: Improperly Integrated Isomers and/or coeluting compounds. This system often fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations are wrong, and they must be corrected by manual integration. Prime examples are benzo(k)fluoranthene and benzo(b)fluoranthene which are often unresolved and integrated improperly when both are present at low concentrations in standards or samples.

Reason #4: System Establishes Incorrect Baseline. There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and should be corrected via manual procedures.

Reason #5: Miscellaneous. Other situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the laboratory management. If the form of manual integration is not clearly covered by these four cases, then review and approval by the Managing Director or the QAO will be required.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Microbac Laboratories Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager or designated person, as verified by the following signature.

2.1.1.2 QC Summary Data

Example 8260 Calculations

1.0 Calculating the Response Factor (RF) from the initial calibration (ICAL) data:

RF = [(Ax) (Cis)] / [(Ais) (Cx)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured:	3399156
Cis = Concentration of the specific internal standard (ug/mL)	25
Ais = Area of the characteristic ion of the specific internal standard	846471
Cx = Concentration of the compound in the standard being measured (ug/mL)	100
RF = Calculated Response Factor	**1.0039**

2.0 Calculating the concentration (C) of a compound in water using the average RF: *

Cx = [(Ax) (Cis) (Vn)(D)] / [(Ais) (RF) (Vs)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Vs = Purge volume of sample (mL)	**10**
Vn = Nominal purge volume of sample (mL) (10.0 mL)	**10**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

3.0 Calculating the concentration (C) of a compound in soil using the average RF: *

Cx = [(Ax) (Cis) (Wn)(D)] / [(Ais) (RF) (Ws)]

where:

	Example
Ax = Area of the characteristic ion for the compound being measured	**3122498**
Cis = Concentration of the specific internal standard (ug/L)	**25**
D = Dilution factor for sample as a multiplier (10x = 10)	**1**
Ais = Area of the characteristic ion of the specific internal standard	**611048**
RF = Average RF from the ICAL	**1.004**
Ws = Weight of sample purged (g)	**5**
Wn = Nominal purge weight (g) (5.0 g)	**5**
Cx = Concentration of the compound in the sample being measured (ug/L)	**127.2428**

Dry weight correction:

Percent solids (PCT_S)	**50**
Cd = (Cx) (100)/PCT_S	**254.4856**

* Concentrations appearing on the instrument quantitation reports are on-column results and do not take into account initial volume, final volume, and the dilution factor.

4.0 Concentration from Linear Regression

Step 1: Retrieve Curve Data From Plot, y = mx + b

y = response ratio = response of analyte / response of IS = Ax/Ais

x = amount ratio = concentration analyte/concentration internal standard = Cx / Cis

m = slope from curve = 0.213

b = intercept from curve = - 0.00642

Step 2: Calculate y from Quantitation Report

y = 86550/593147 = 0.1459

Step 3: Solve for x

x = (y - b)/m = [(0.1459 -(- 0.00642)]/ 0.213 = 0.7152

Step 4: Solve for analyte concentration Cx

Cx = Cis (x) = (25.0)(0.7152) = 17.88

Example Spreadsheet Calculation:

Slope from curve, m:	**0.213**
Intercept from curve, b:	**-0.00642**
Area of analyte, Ax:	**86550**
Area of Internal Standard , Ais:	**593147**
Concentration of IS, Cis	**25.00**
Response Ratio:	**0.145917**
Amount Ratio:	**0.715195**
Concentration:	**17.87988**
Units of Internal Standard:	**ug/L**

5.0 Concentration from Quadratic Regression

Step 1 - Retrieve Curve Data from Plot, y = Ax^2 + Bx + C
Where:
Ax^2 + Bx + (C - y) = 0
A, B, C = constants from the ICAL quadratic regression
y = Response ratio = Area of analyte/Area of internal standard (IS)
x = Amount ratio = Concentration of analyte/concentration of IS

Step 2: Calculate y from Quantitation Report

y = Ax/Ais

Step 3: Solve for x using the quadratic formula
Ax^2 + Bx + C - y = 0

$$x = \frac{b \pm \sqrt{\left(b^2 - 4a(c - y)\right)}}{2a}$$ (Two possible solutions)

Step 4: Solve for analyte concentration Cx

Cx = (Cis)(Amount ratio)

Example Spreadsheet Calculation:

Value of A from plot:	**-0.00629**	
Value of B from plot:	**0.511**	
Value of C from plot:	**-0.0276**	
Area of unknown from quantitation report:	**293821**	
Area of IS from quantiation report:	**784848**	
Response ratio, y:	**0.374367**	
C - y:	**-0.40197**	
Root 1 - Computed amount ratio , X1:	**80.44567**	
Root 2 - Computed amount ratio , X2:	**0.794396**	use this solution
Concentration of IS, Cis:	**25.00**	
Concentration of analyte, Cx:	**19.86**	ug/L

Microbac Laboratories Inc.
List of Valid Qualifiers
October 23, 2017

Qualkey: AFCEE40

Qualifier	Description
*	Surrogate or spike compound out of range
*	This surrogate or spike analyte was diluted out.
>	Result is greater than the associated numerical value.
B	The analyte was found in an associated blank, as well as in the sample.
D	This analyte was quantified at a secordary dilution.
F	Found; the analyte was positively identified with concentration above MDL but below RL.
J	The analyte was positively identified, but the quantitation is an estimate.
M	Matrix effect; the concentration is an estimate due to matrix effect.
NF	This compound was not detected by library search.
NFL	No free liquid was observed for this sample.
NS	This compound was not spiked in the LCS, MS or MSD.
Q	One or more quality control criteria failed. See narrative.
R	Data may be rejected due to quality control deficiencies.
S	Field screening data
U	Undetected; the analyte was analyzed for, but not detected.
UJ	Undetected; the MDL and RL are estimated due to quality control discrepancies.

Data Quality Evaluation

DATA QUALITY EVALUATION

Long-Term Monitoring (LTM) was conducted by HDR for the Main Installation (MI) and Dunn Field at the former Defense Depot Memphis, Tennessee (DDMT) in April and October 2017. The wells to be sampled were identified in the *Annual Long-Term Monitoring Report-2017, Revision 1* (HDR, 2017) based on criteria developed in accordance with the MI LTM Plan in Appendix B of the *Main Installation Final Remedial Design, Revision 1* (CH2M Hill, 2004) and the Dunn Field LTM Plan in Appendix C of *Off Depot Groundwater Final Remedial Design, Revision 1* (CH2M HILL, 2008).

Groundwater samples for the MI and Dunn Field were submitted to Microbac Laboratories in Marietta, Ohio for analysis. Field activities and laboratory analyses were performed in accordance with the *2017 Uniform Federal Policy-Quality Assurance Project Plan, Revision 0* (2017 QAPP) (HDR 2017).

The data quality evaluation (DQE) process involves assessment of all field and laboratory procedures for compliance with the QAPP. Data validation was completed by Diane Short and Associates, Inc (DSA). This assessment is designed to evaluate problems with quality assurance (QA)/quality control (QC) associated with the laboratory data and potential impact to the data quality objectives (DQOs). The DQE findings are summarized in the following sections.

FIELD ACTIVITIES AND FIELD QUALITY CONTROL

Main Installation: The field effort included the collection of groundwater samples from 104 of 105 designated wells and piezometers during the semiannual Main Installation LTM event in April 2017 and from the 125 of 126 designated wells and piezometers during the annual sampling event in October 2017. The Main Installation LTM well locations are shown on Figure 4 of the report.

Dunn Field: The field effort included the collection of groundwater samples from 85 designated wells during the biennial Dunn Field event in April 2017 and from 16 designated wells during the semiannual Dunn Field event in October 2017. The Dunn Field LTM well locations are shown on Figure 5 of the report.

Field QC samples were collected at selected wells to evaluate sampling technique and decontamination procedures. These samples included field duplicates, trip blanks and field equipment (rinsate) blanks. Additional samples were collected at selected locations for matrix spike/matrix spike duplicate (MS/MSD) analyses in the laboratory. Sample bottles met U.S. Environmental Protection Agency (USEPA) requirements for environmentally clean containers. Sample labels were pre-printed to facilitate sample tracking from the field through the laboratory. Documentation of the sampling was performed in the field to ensure that the samples collected, sample labels, chain-of-custody (COC) records, and request for analysis were consistent. Where necessary, additional COC forms were filled out manually. Custody seals were placed on each sample cooler prior to shipment by common carrier.

ANALYTICAL METHODS

The groundwater samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) by method SW 8260B.

LABORATORY QUALITY CONTROL

The laboratory QC program, including sample handling, laboratory control, and reporting, is documented in the 2017 QAPP. Sample handling includes documentation of sample receipt, placement in storage, lab personnel using the sample, and disposal. The laboratory control consists of instrument calibration and maintenance, laboratory control samples (LCS), method blanks and matrix spikes. Reporting of the laboratory control data was planned prior to the collection of the data, allowing the laboratory to place the appropriate information into the data package so that the DQE could be performed in a timely manner.

DQE SUMMARY

The objective of the DQE was to provide a review of the chemical data reports submitted by the laboratory and to assess the data in relation to the DQOs stated in the 2017 QAPP. The DQE consisted of review of laboratory QC data and field QC parameters, and flagging of the data as usable, usable with qualification, or unusable in accordance with the DQE standard operating procedures (SOPs) using the criteria for each analytical method performed. The following information was reviewed:

- Sample Integrity (Deliverables)
- Sample Completeness
- Sample Holding Times
- Laboratory Methods for Extraction and Analysis (Calibration, Internal Standards)
- Method Accuracy (bias) and Precision (Surrogates, MS/MSD, LCS Recoveries)
- Laboratory Performance Criteria (Blanks, Instrument Performance Checks)

Field QC parameters were evaluated through field duplicates, rinsate blanks, field documentation, and shipping criteria.

The DQE was summarized by use of flags that indicate to the reviewer that the data being considered has been qualified using the established criteria. Sample delivery group (SDG) narratives detailing the evaluation of the laboratory data by DSA are included as attachments in this Appendix. The SDGs and associated groundwater samples are listed on Table C-1 (Main Installation) and Table C-2 (Dunn Field).

The following sections provide summary discussions of the required data qualifications for each sampling event. A Level III DQE was performed and the data quality indicators (DQIs), expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity, were assessed. This included the evaluation of sample integrity, holding times, trip blanks, rinsate blanks, method blanks, internal standards, surrogate recoveries, MS/MSD recoveries, LCSs, and field duplicate precision. The results of the DQI assessment are provided below.

Precision

Field duplicates were collected to assess sampling precision. They consisted of replicate grab samples collected concurrently with the associated field samples. Precision is best expressed in terms of relative percent difference (RPD).

Main Installation, April 2017: Field precision goals were met for the duplicate sample pairs collected during the LTM sampling event, with the exception of two analyte results (MTBE and PCE in sample PMW101-06A-LS-25); the associated data are qualified J or UJ and as such are valid.

Main Installation, October 2017: Field precision goals were met for the duplicate sample pairs collected during the LTM sampling event.

Dunn Field, April 2017: Field precision goals were met for the duplicate sample pairs collected during the LTM sampling event.

Dunn Field, October 2017: Field precision goals were met for the duplicate sample pairs collected during the LTM sampling event.

Laboratory precision is discussed in more detail in the attached narratives.

Accuracy

Accuracy or bias was measured through the analyses of LCSs and MS/MSDs. Sample specific accuracy is measured through surrogate recovery. Accuracy is expressed as percent recovery (%R). Field and laboratory blanks are analyzed to assess potential bias in the reported sample results. Bias is expressed through qualification of analytical results.

Sample results are evaluated against blank results as described in the *National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA, September 2016). Sample results with concentration of an analyte less than the RL and less than the concentration in an associated blank (or less than two times the concentration in the blank for common laboratory contaminants acetone, 2-butanone [MEK] and methylene chloride) are reported as non-detect at the standard RL. Sample results with concentration of an analyte greater than the RL but less than the concentration in an associated blank (or less than two times for common laboratory contaminants) are reported as non-detect at an elevated RL. Sample results greater than the blank result (or greater than two times for common laboratory contaminants) are not considered to have been greatly affected and are not qualified.

This is a change from the qualification used for LTM events through 2015. Previously sample results were reported with a B qualifier when the sample concentration of an analyte was less than five times (10 times for common laboratory contaminants) the concentration in an associated blank, or a JB flag when the sample concentration was less than the RL and less than five times (or 10 times for common laboratory contaminants) the concentration in an associated blank.

Main Installation, April 2017: Although there were three low MS/MSD recoveries and two low LCS recoveries observed in the event, all associated data are qualified J or UJ and as such are valid.

Main Installation, October 2017: Accuracy goals in the form of MS/MSD and LCS/LCSD recoveries were met.

Dunn Field, April 2017: Although there were two low MS/MSD recoveries and two low LCS recoveries observed in the event, all associated data are qualified J or UJ and as such are valid.

Dunn Field, October 2017: Accuracy goals in the form of MS/MSD and LCS/LCSD recoveries were met.

Further discussion of the LCS and MS/MSD recoveries is provided in the attached DQE narratives.

Representativeness

Representativeness refers to the degree sample data accurately and precisely describes the population of samples at a sampling point or under certain environmental conditions. Samples that are not properly preserved or are analyzed beyond holding times may not be considered representative. Review of

sampling procedures, laboratory preparation, analysis holding times, trip blank and rinsate blank analysis help in providing this assessment.

Main Installation: Sampling procedures followed the 2017 QAPP and were considered representative of the matrices collected. Laboratory preparation and analysis followed method guidelines.

Dunn Field: Sampling procedures followed the 2017 QAPP and were considered representative of the matrices collected. Laboratory preparation and analysis followed method guidelines.

Comparability

The selection of standardized methods and consistent laboratory practices facilitates the comparison of data between sampling events. Consistent methodology has been maintained throughout the LTM sampling events, except for the 2016 change to qualification due to analytes detected in blank samples, as described under **Accuracy**.

Main Installation: Past LTM data are comparable to recent events.

Dunn Field: Past LTM data are comparable to recent events.

Completeness

Completeness is determined for both field and analytical objectives. Field completeness is calculated from the number of samples proposed versus the actual number of samples collected. Analytical completeness is expressed in terms of usable data. The project completeness goal for DDMT is 90% as stated in the 2017 QAPP.

Main Installation: Data from the LTM events was greater than 99% (One planned sample [PZ-03] was not collected in each event) and therefore met the completeness DQO.

Dunn Field: Data from the LTM events was 100% complete and therefore met the completeness DQO.

Sensitivity

Analytical sensitivity is the concentration at which the measurement system can quantitate target analytes in the environmental matrices of concern. Analytical sensitivity is expressed in terms of the RL, which is provided by the respective laboratories as their reasonable and defensible quantitation limit for environmental samples above the method detection limit (MDL), which is established by each laboratory using pure water or clean matrix.

Main Installation: The analytical method RLs and MDLs were compared to groundwater protection standards as listed in the 2017 QAPP and were generally below the standards for the contaminants of concern except as discussed below.

In April and October, sample MW-213 was analyzed at a five-fold dilution. In April, sample PMW101-02A was analyzed at a five-fold dilution. In April and October, sample DR2-5 was analyzed at a 50-fold dilution. The reason for the dilutions, given in the case narratives, was that these samples were dark and foamy. In the five-fold dilution samples, the RLs for the CVOCs (PCE, TCE and cDCE) were at or below the MCLs. In the 50-fold dilution samples, the RLs and the MDLs for some of the CVOCs (PCE, TCE and CT) were above the MCLs, suggesting that the CVOCs could be present above the MCLs but would not be detected.

Dunn Field: The analytical method RLs and MDLs were compared to groundwater protection standards as listed in the 2017 QAPP and were below the standards for the contaminants of concern.

The following sections discuss only those deficiencies encountered during the evaluation that resulted in qualified and/or unusable data.

Main Installation Semi-Annual Event – April 2017

A total of 134 water samples including 106 groundwater field samples and 29 QA/QC samples (duplicates, MS/MSD, trip blanks, rinsate blanks) were collected from 104 LTM wells in April 2017. Samples were collected from two screened intervals in MW-101 and MW-107. Sample PMW101-02A-LS-25 was received at the lab with headspace bubbles larger than 6 millimeters (mm) in diameter in all three sample vials; this sample was recollected and analyzed, and the initial sample was also analyzed. Samples were analyzed for TCL VOCs. The data are usable with qualifications as described below:

- Seventeen results for bromomethane, 12 results for chloromethane and three results for 1,2,3-trichlorobenzene were non-detect and qualified "UJ" due to high percent difference with low response in continuing calibration standards. The qualified analytes are not contaminants of concern (COCs) at the MI.
- One result for acetone was detected and qualified "J-" due to a high percent difference with low response in a continuing calibration standard. Acetone is not a COC at the MI.
- cis-1,2-DCE in one sample (PMW92-03-LS-25) was qualified as estimated "J" due to low matrix spike/matrix spike duplicate (MS/MSD) recoveries. TCE in one sample (MW-259-LS-25) was qualified as estimated "J" due to low MS/MSD recoveries. cis-1,2-DCE and TCE are COCs at the MI; the cis-1,2-DCE concentration in the parent sample was well below the MCL, and the TCE concentration in the parent sample was well above the MCL.
- The final qualifier for acetone in 76 samples was 10.0 U where DSA had qualified as BTB4.54 or BTB5 for acetone in the trip blank. Sample results were less than the reporting limit (RL) and qualified as non-detect at the RL. Acetone is not a COC at the MI.
- The final qualifier for acetone in 10 samples was "no qualification" where DSA had qualified as BTB5 for acetone in the trip blank. Sample results were greater than two times the blank concentration. Acetone is not a COC at the MI.
- The final qualifier for PCE in seven samples was 1.00 U where DSA had qualified as BTB0.278 for PCE in the trip blank at a trace level of 0.278 µg/L. The sample results were detected below the RL and qualified as non-detect at the RL. PCE is a COC at the MI, with an MCL of 5 µg/L, and the qualified sample results were below this level.
- The final qualifier for all analytes in the initial sampling and analysis of PMW101-02A-LS-25 was J- or UJ where DSA had qualified JP due to headspace in the containers.
- MTBE and PCE in sample PMW101-06A-LS-25 and its field duplicate DUP-11 were qualified "J" for field duplicate RPDs outside the control limit. MTBE is not a COC at the MI. PCE is a COC at the MI; both results were above the MCL.
- Any result reported below the RL but above the method detection limit was flagged "J" and considered an estimated result (unless overridden by other quality control [QC] flags).

Main Installation Annual Event – October 2017

A total of 161 water samples including 127 groundwater field samples and 34 QA/QC samples (duplicates, MS/MSD, trip blanks, rinsate blanks) were collected from 125 LTM wells in October 2017. Samples were collected from two screened intervals in MW-101 and MW-107. Five samples were received at the lab with headspace bubbles larger than 6 millimeters (mm) in diameter in all three sample vials. Some samples were field duplicates, had MS/MSD samples, or were a parent sample to a field duplicate, with vials with no headspace, and the lab was instructed to use the available vials for analysis. Samples that did not have other available vials were resampled (DR1-6A and MW-203A). The only sample that had headspace in all three vials that was not substituted or resampled was LTM-TB3-LA-26. The lab attributed the large number of headspace bottles with a defective batch of sample vials from the manufacturer. Samples were analyzed for TCL VOCs. The data are usable with qualifications as described below:

- Ten results for chloromethane, four results for acetone and one result for 2-chlorotoluene were non-detect and qualified "UJ" due to high percent difference with low response in continuing calibration standards. The qualified analytes are not contaminants of concern (COCs) at the MI.
- One result for acetone was detected and qualified "J-" due to a high percent difference with low response in a continuing calibration standard. Acetone is not a COC at the MI.
- The final qualifier for acetone in seven samples was 10.0 U where DSA had qualified as BTB2.87 for acetone in the trip blank. Sample results were less than the reporting limit (RL) and qualified as non-detect at the RL. Acetone is not a COC at the MI.
- The final qualifier for acetone in one sample was 10.0 U where DSA had not qualified for acetone in the trip blank. The sample result was less than the reporting limit (RL) and qualified as non-detect at the RL.
- The final qualifier for acetone in 10 samples was "no qualification" where DSA had qualified as BTB2.87 for acetone in the trip blank. Sample results were greater than two times the blank concentration. Acetone is not a COC at the MI.
- The final qualifier for all analytes in sample DUP6-LA-26 was "no qualifier" where DSA had qualified as JP to indicate integrity issues due to sample vial headspace. This was a field duplicate sample, and the lab was instructed to analyze one of the vials from the parent sample (MW-100B-LA-26), which had no headspace, as the field duplicate.
- The final qualifier for all analytes in sample LTM-TB3-LA-26 was UJ where DSA had qualified JP due to headspace in all three sample vials.
- Any result reported below the RL but above the method detection limit was flagged "J" and considered an estimated result (unless overridden by other quality control [QC] flags).

Dunn Field Biennial Event – April 2017

A total of 108 water samples including 85 groundwater field samples and 23 QA/QC samples (duplicates, MS/MSD, trip blanks, rinsate blanks) were collected from 85 LTM wells in April 2017. Samples were analyzed for TCL VOCs. The data are usable with qualifications as described below:

- Forty-one results for bromomethane, 12 results for chloromethane and four results for acetone were qualified UJ due to high percent differences with low response in continuing calibration standards. These analytes are not COCs at Dunn Field.

- Eleven results for acetone were detected and qualified "J-" due to a high percent difference with low response in a continuing calibration standard. Acetone is not a COC at Dunn Field.
- The final qualifier for acetone in sample MW-08-ODLB-14 was 10.0 U where DSA had qualified as BEB7.42 for acetone in the equipment blank. The sample result was less than the RL and qualified as non-detect at the RL. Acetone is not a COC at Dunn Field.
- The final qualifier for chloroform in sample MW-08-ODLB-14 was 0.300 U where DSA had qualified as BEB.492 for chloroform in the equipment blank. The sample result was less than the RL and qualified as non-detect at the RL. Chloroform is a COC at Dunn Field.
- 2,2-Dichloropropane in one sample (MW-247-ODLB-14) was qualified as non-detect estimated "UJ" due to low matrix spike/matrix spike duplicate (MS/MSD) recoveries. TCE in one sample (MW-130-ODLB-14) was qualified as estimated "J" due to low MS/MSD recoveries. 2,2-Dichloropropane is not a COC at Dunn Field. TCE is a COCs at Dunn Field; the TCE concentration in the parent sample was well above the MCL.
- Any result reported below the RL but above the method detection limit was flagged "J" and considered an estimated result (unless overridden by other QC flags).

Dunn Field Semiannual Event – October 2017

A total of 21 water samples including 16 groundwater field samples and five QA/QC samples (duplicates, MS/MSD, trip blanks, rinsate blanks) were collected from 16 LTM wells in October 2017. Samples were analyzed for TCL VOCs. The data are usable with qualifications as described below:

- Six results for bromomethane were qualified UJ due to high percent differences with low response in continuing calibration standards. Bromomethane is not a COC at Dunn Field.
- Any result reported below the RL but above the method detection limit was flagged "J" and considered an estimated result (unless overridden by other QC flags).

SUMMARY

Main Installation: The sample data from the LTM event at the Main Installation met the data quality objectives and are of sufficient quality to support the evaluation of remedial actions.

Dunn Field: The sample data from the LTM event at Dunn Field met the data quality objectives and are of sufficient quality to support the evaluation of remedial actions.

ORGANIC DATA QUALITY REVIEW REPORT
Volatile Organics by SW-846 Method 8260B (GC/MS)

SDG	L1704: 1069, 1075, 1110, 1209
PROJECT	Memphis Defense Depot, LS-25 Sampling for HDR, Denver
LABORATORY	Microbac Laboratories, Inc., Marietta, OH
SAMPLE MATRIX	Water
SAMPLING DATE	04/ 2017
NUMBER OF SAMPLES	134 samples, including 11 field duplicates, 5 trip blanks, and 6 MS/MSDs
ANALYSES REQUESTED	SW-846 8260B (VOA by GC/MS)
SAMPLE NUMBER	See result forms attached and associated EDD

DATA REVIEWER: Diane Short

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: __ DLS 05/18/2017

Telephone Logs included Yes____ No __X_

Contractual Violations Yes____ No __X_

The project QAPP (09/11), the EPA Contract Laboratory Program National Functional Guidelines for Organic Review, 1999 and 2010, and the SW-846 Method 8260B have been referenced by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes Level III validation of all chains of custody, calibrations and QC forms referencing the QC limits in the above documents.

I. DELIVERABLES

A. All deliverables were present as specified in the Statement of Work (SOW), SW-846, or in the project contract.
Yes __X__ No _____
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations. The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8260B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

B. Chain of Custody documentation was complete and accurate.
Yes __X__ No _____

C. Samples were received at the required temperature, preservation and intact with no bubbles.
Yes ____ No _X____
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be equal to or less than 6 °C. The sample temperature conditions are fully compliant with applicable regulations.
One sample PMW101-02A-LS-25 arrived with headspace > 6 mm in all 3 vials. All data are qualified JP to indicate possible low bias. The sample was re-sampled and re-analyzed with acceptable results in the final SDG :17041209.
Sample DR2-5 had headspace in 2 vials. The third vial as used for analysis.

II. ANALYTICAL REPORT FORMS

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes __X__ No _____

B. Holding Times
1. The contract holding times were met for all analyses [time of sample receipt to time of analysis (VOA) or time of extraction to time of analysis].
Yes __X__ No _____

2. The Clean Water Act (40 CFR 136) or method holding times were met for all analyses (14 days from time of sample collection to analysis or extraction).
Yes __X__ No _____
Several method blanks were run just slightly over the 12 hour limit. This has not impacted client data.

III. INSTRUMENT CALIBRATION – GC/MS

A. Initial Calibration
1. The Response (RF) and Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the contract criteria of > 0.05 or > 0.01 for poor responding volatiles.
Yes __X__ No _____ NA _____
Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common “poor responders.” Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for “poor responders.”

Most of the low-responding compounds are highly water-soluble and capable of hydrogen bonding with water. This decreases their purge efficiency and results in the relatively low response. The implication of this low

purge efficiency is that a relatively low absolute recovery of such compounds is achieved in the purge step of the analysis. If this recovery is consistent, reasonable accuracy and precision can be achieved in a given matrix, which is indicated for the lab matrix by acceptable recoveries in LCS and calibration checks. However, this causes these targets to be more sensitive to matrix variations that impact purge efficiency (such as ionic strength or the presence of varying levels of soluble non-target organic material) than are the more hydrophobic compounds typically analyzed by this method, and as a result they are more likely to exhibit matrix bias.

Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There is not anything in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

2a. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for the CCCs.
Yes __X__ No _____ NA _____
This is a method requirement and indicates that the analytical system is in control.

2b. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for all other compounds, the average % RSD was < 15%, or a linear curve was used.
Yes __X__ No _____ NA _____

3. The 12 hour system Performance Check was performed as required in SW-846 and met the QC limits of 80 – 120%.
Yes ____ No __X___ NA _____
Instrument 17: Dichlorodifluoro and Trichlorofluoro methane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.
For Instrument 11: Dichlorodifluoromethane and chloromethane are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

B. Continuing Calibrations
1. The midpoint standard was analyzed for each analysis at the required frequency, and the QC criterion of > 0.05 (> 0.01 for CLP 2001 VOA) was met.
Yes __X__ No _____ NA _____
Poor responders met the noted limits.

2. The percent difference (% D) limits of ± 25% were met. The 2001 NFG also allow for 40% D for the "poor responders (pr)". For other compounds, the QAPP notes rejection of detected compounds with % D > 40%.
Yes _____ No __X__ NA _____
There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.

Instrument 6 and 17 reported outliers for bromoromethane at 31.9% and -25.5% respectively
Instrument 17 for dichlorodifluoromethane (34.1%),and trichlorofluormethane (-36%).
Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Note: The laboratory flagged various %Ds as outside the laboratory QC limits of 20%: however, the %Ds were evaluated using the NFG QC limit of 25% and only detected results equal or greater than 25% were considered for validation.

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
The BFB (VOA) performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes __X__ No _____ NA _____

V. INTERNAL STANDARDS
The Internal Standards met the 100% upper and -50% lower limits criteria, and the Retention times were within the required windows.
Yes __X__ No _____ NA _____

VI. SURROGATE STANDARDS
Surrogate spikes were analyzed with every sample.
Yes __X__ No _____

And met the recovery limits defined in the QAPP , which are the laboratory limits.
Yes _X___ No _____
All surrogates recoveries were within criteria.

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE
A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes __X__ No _____
All MS/MSD samples were associated with the client samples and are identified as (all ending in LS-25) MW-282, PMW-92-03, MW-259, DR1-6A, MW-100B, MW204B. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.

B. The MS and MSD percent recoveries were within the limits defined in the updated 2011 QAPP, which now references the laboratory limits.
Yes ____ No _X____ NA _____
The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.
For MW-100B, Vinyl chloride result was 4 x the spike and no data are qualified.
For DR1-6A, the low recovery appears to be related to laboratory accuracy (LCS %R).

LAB ID	CLIENT ID	ANALYTE	Result ug/L	MDL	DSA Q
L17041069-07	PMW92-03-LS-25	cis-1,2-Dichloroethene	27.7	0.25	JMS69
L17041069-26	MW-259-LS-25	2,2-Dichloropropane	U	0.25	JD32.6
L17041069-26	MW-259-LS-25	Trichloroethene	20.1	0.25	JMS64

C. The MSD relative percent differences (RPD) were within the defined contract limits, which are 30%.
Yes ____ No __X___ NA _____
Qualifiers are added only when the MS or MSD recovery is also out of limits or the RPD exceeds 30%. Data are qualified "JD#", where # is the RPD. As the RPD increases, the matrix precision decreases. All RPD limits are met with the 2 exception noted in the table above. As the RPD increases, the precision decreases.
For MW 259 for 2,2-Dichloropropane the spike results were within limits. It was only the RPD that was out of limits.

D. The MS/MSD were client samples.

Yes __X__ No _____ NA _____

VIII. LABORATORY CONTROL SAMPLE

A. Laboratory Control Sample (LCS) was analyzed for every analysis performed and for every 20 samples.
Yes __X__ No _____

B. The LCS percent recoveries were within the limits defined in the updated 2011 QAPP, which are the laboratory limits. If an LCS and LCSD are analyzed, both samples must have the same compounds out for data to be qualified.
Yes __X__ No _____
The full target list has been spiked. When a high LCS recovery is associated with a non-detect in samples, no qualifier is added since the indicated bias is high. When the target is detected, data are qualified "JL#", where # is the recovery. Data could be biased low proportional to the LCS percent recovery or false non-detected data could be reported.

IX. BLANKS

A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.
Yes __X__ No _____

B. No blank contamination was found in the Method Blank.
Yes ___X__ No ____
Whenever Methylene Chloride, Acetone, 2-Butanone are detected in associated samples at a level less than 10 × the Method Blank (corrected for dilution), data are qualified "BMB#", where # is the corrected Method Blank level. All method blanks were reported as non-detect. Laboratory blanks are applied with the appropriate sample dilution factor.

C. If Field Blanks were identified, no blank contamination was found.
Yes _____ No _X____ NA ____
There are 5 trip blanks and one equipment blank. Acetone was reported in the equipment blank and in TB1, 2 and 5 . Data have been qualified "BTB#", where # is the Trip Blank result or BEB# for the rinse blanks. TB 1 also reported tetrachloroethene. The project manager has clarified that TB 1-3 apply to samples in SDGs L17041069 and 1075. Worst case has been applied as the times of blank collection are the same. The equipment blank was specified as applying to only DR2-5. This blank has low level gasoline compounds 1,4 dichlorobenzene, chloroform, ethyl benzene and toluene. Only acetone required qualification in the one sample. Data are fully usable as non-detected results. Field blanks are applied directly without applying a dilution factor.

X. FIELD QC

If Field Duplicates were identified, they met guidance for VOA of RPD of < 30% for water or < 50% for soil. For values reported at < 5 × the reporting limit (RL), a difference of 2 × RL or 3.5 × RL for soil is used as guidance. This is referred to as the CRDL Rule. Data are not qualified for Field Duplicates as these are evaluated for the total project by the Project Manager.

Yes _____ No __X__ NA _____

There are 11 identified field duplicates as described in the following table. If data were qualified they would be JFD#, where # is the RPD. As the RPD increases, the precision decreases. There are low level or non-detect results which would usually be qualified for the difference between the two values as one of the values is less than 5 x RL. These were within limits for these samples. All RPDs were acceptable or differences between low level values were less than 2 x RL with the exceptions noted below.

XI. SYSTEM PERFORMANCE

A. The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.
Yes _____ No _____ NA __X__
Not part of this review level. It is noted, however, that Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There was nothing in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but this cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

B. The suggested EQLs for the sample matrices in this set were met.
Yes __X__ No _____ NA _____

XII. OVERALL ASSESSMENT OF THE CASE
The laboratory has complied with the requested method. Data are fully usable after consideration of qualifiers. The following is noted:
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations.

The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8026B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

Chain of Custody
One sample PMW101-02A-LS-25 arrived with headspace > 6 mm in all 3 vials. All data are qualified JP to indicate possible low bias. The sample was re-sampled and re-analyzed with acceptable results in the final SDG :17041209.
Sample DR2-5 had headspace in 2 vials. The third vial as used for analysis.

Calibrations
Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common "poor responders." Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."
Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There is not anything in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

ICV and CCV
There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.
Instrument 17: Dichlorodifluoro and Trichlorofluoro methane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.
For Instrument 11: Dichlorodifluoromethane and chloromethane are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.
Poor responders met the noted limits.

For Instrument 11, the response is averaged to 0.0025. All other instruments are 0.0017 to 0.0012.
Instrument 6 and 17 reported outliers for bromoromethane at 31.9% and -25.5% respectively
Instrument 17 for dichlorodifluoromethane (34.1%),and trichlorofluormethane (-36%).
Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Matrix Spikes

The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.
All MS/MSD samples were associated with the client samples and are identified as (all ending in LS-25) MW-282, PMW-92-03, MW-259, DR1-6A, MW-100B, MW204B. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.
The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.
Vinyl chloride result was 4 x the spike and no data are qualified.
Qualifiers are added only when the MS or MSD recovery is also out of limits or the RPD exceeds 30%. Data are qualified "JD#", where # is the RPD. As the RPD increases, the matrix precision decreases. All RPD limits are met with the 2 exception noted in the table above. As the RPD increases, the precision decreases.
For MW 259 for 2,2-Dichloropropane the spike results were within limits. It was only the RPD that was out of limits.

Field Blanks

There are 5 trip blanks and one equipment blank. Acetone was reported in the equipment blank and in TB1, 2 and 5 . Data have been qualified "BTB#", where # is the Trip Blank result or BEB# for the rinse blanks. TB 1 also reported tetrachloroethene. The project manager has clarified that TB 1-3 apply to samples in SDGs L17041069 and 1075. Worst case has been applied as the times of blank collection are the same. The equipment blank was specified as applying to only DR2-5. This blank has low level gasoline compounds 1,4 dichlorobenzene, chloroform, ethyl benzene and toluene. Only acetone required qualification in the one sample. Data are fully usable as non-detected results.

Field QC

There are 11 identified field duplicates as described in the following table. If data were qualified they would be JFD#, where # is the RPD. As the RPD increases, the precision decreases. There are low level or non-detect results which would usually be qualified for the difference between the two values as one of the values is less than 5 x RL. These were within limits for these samples. All RPDs were acceptable or differences between low level values were less than 2 x RL with the exceptions noted below.

Final Data Qualification and Usability Report

Project:	Defense Depot Memphis, TN (DDMT) Main Installation Long Term Monitoring
Sampling Event:	LS-25
Project / Task Number:	228-235772-005
Sample Data Package(s):	L17041069, L17041075, L17041110, L17041209
Data Validation Performed by:	Diane Short & Associates (DSA)
Final Data Qualification and Usability Report Prepared by:	Lynn K. Lutz, HDR Inc.

Data Validation Report Review and Comments

The validation report was acceptable except as noted below for final qualifiers.

The validator, in discussing relative response factors, noted that "[t]he laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for 'poor responders.'" The Project Chemist reviewed the area counts for the lowest standard included in the initial calibration for the low responders and found the areas to be adequate, and no qualifiers were applied.

The validator did not qualify a number of analytes based on low or high responses in the CCV; the PC evaluated the %D values and qualified associated results as estimated "J+" for high or "J-" for low results or non-detect estimated "UJ" for non-detect low results, as both the project QAPP and the method require CCV results be within 20%D:

- Bromomethane - workgroup # WG611071: %D = -31.9% (UJ)
- Chloromethane - workgroup # WG611145: %D = -24.3% (UJ)
- 1,2,3-Trichlorobenzene - workgroup # WG611222: %D = -23.6% (UJ)
- Bromomethane - workgroup # WG611301: %D = +20.4% (none, all ND)
- Bromomethane - workgroup # WG612030: %D = -25.5% (UJ)
- Bromomethane - workgroup # WG612123: %D = -24.5% (UJ)
- Acetone - workgroup # WG612142: %D = -21.6% (J-)
- Bromomethane - workgroup # WG612250: %D = -21.2% (UJ)

Final Data Qualifiers

The final qualifiers were UJ or J- where DSA had not qualified for calibration issues as noted above, for these analytes:

Bromomethane – 17 samples (UJ)
Chloromethane – 12 samples (UJ)
1,2,3-Trichlorobenzene - 3 samples (UJ)
Acetone – 1 sample (J-)

The final qualifier for all analytes in the initial sampling and analysis of PMW101-02A-LS-25 was J- or UJ where DSA had qualified JP due to headspace in the containers.

The final qualifier for cis-1,2-dichloroethene in sample PMW92-03-LS-25 was estimated J where DSA had qualified JMS69 for low MS/MSD recoveries.

The final qualifier for trichloroethene in MW-259-LS-25 was estimated J where DSA had qualified as JMS64 for low MS/MSD recoveries.

The final qualifier for 2,2-dichloropropane in MW-259-LS-25 was none where DSA had qualified as JD32.6 for a high MS/MSD RPD with a non-detected parent sample result.

The final qualifier for MTBE and tetrachloroethene in sample PMW101-06A-LS-25 and its field duplicate DUP-11 was J where DSA had qualified as JFD34.6 and JFD113 for field duplicate RPDs outside the control limit.

The final qualifier for acetone in 72 samples was 10.0 U where DSA had qualified as BTB5 for acetone in the trip blank. Sample results were less than the reporting limit (RL) and qualified as non-detect at the RL.

The final qualifier for acetone in four samples was 10.0 U where DSA had qualified as BTB4.54 for acetone in the trip blank. Sample results were less than the reporting limit (RL) and qualified as non-detect at the RL.

The final qualifier for acetone in 10 samples was “no qualification” where DSA had qualified as BTB5 for acetone in the trip blank. Sample results were greater than two times the blank concentration.

The final qualifier for tetrachloroethene in seven samples was 1.00 U where DSA had qualified as BTB0.278 for tetrachloroethene in the trip blank. Sample results were less than the RL and qualified as non-detect at the RL.

The final qualifier was J where the lab had qualified as F.

Data Usability

There were no rejected sample results. All results are usable as qualified.

ORGANIC DATA QUALITY REVIEW REPORT
Volatile Organics by SW-846 Method 8260B (GC/MS)

SDG	L1710: 0514, 0636, 0637, 0710, 0839
PROJECT	Memphis Defense Depot, LA-26 Sampling for HDR, Denver
LABORATORY	Microbac Laboratories, Inc., Marietta, OH
SAMPLE MATRIX	Water
SAMPLING DATE	10/6 – 12/ 2017
NUMBER OF SAMPLES	See EDD for sample numbers 164 samples including 14 field dups, 5 trip blanks, 1 rinse blank and associated MS/MSDs
ANALYSES REQUESTED	SW-846 8260B (VOA by GC/MS)
SAMPLE NUMBER	See result forms attached and associated EDD

DATA REVIEWER: Diane Short

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: __ DLS 11/10/2017

Telephone Logs included Yes____ No __X_

Contractual Violations Yes____ No __X_

The project QAPP (09/11), the EPA Contract Laboratory Program National Functional Guidelines for Organic Review, 1999 and 2010, and the SW-846 Method 8260B have been referenced by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes Level III validation of all chains of custody, calibrations and QC forms referencing the QC limits in the above documents.

I. DELIVERABLES

A. All deliverables were present as specified in the Statement of Work (SOW), SW-846, or in the project contract.
Yes __X__ No _____
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations. The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8260B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

B. Chain of Custody documentation was complete and accurate.
Yes __X__ No _____

C. Samples were received at the required temperature, preservation and intact with no bubbles.
Yes ____ No _X____
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be equal to or less than 6 °C. The sample temperature conditions are fully compliant with applicable regulations.
The client was contacted and any vials with full integrity were used for analysis. Only 2 samples are considered to be possibly biased low or contaminated due to headspace as there was no unaffected vial: Dup-6 and TB-3. Data are qualified 'JP' to indicate integrity issues.

Lab ID	Client ID	Comment
L17100514-09	MW-100B-LA-26	1/3 vials headspace > 6 mm
L17100514-11	MW-21-LA-26	1/3 vials headspace > 6 mm
L17100514-17	DUP-6-LA-26	3/3 vials headspace > 6 mm
L17100514-23	PMW21-01-LA-26	1/3 vials headspace > 6 mm
L17100514-24	DUP-1-LA-26	1/3 vials headspace > 6 mm

L17100637-65	LTM-TB1-LA-26	2/3 vials headspace > 6 mm

II. ANALYTICAL REPORT FORMS

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes __X__ No _____

B. Holding Times
1. The contract holding times were met for all analyses [time of sample receipt to time of analysis (VOA) or time of extraction to time of analysis.
Yes __X__ No _____

2. The Clean Water Act (40 CFR 136) or method holding times were met for all analyses (14 days from time of sample collection to analysis or extraction).
Yes __X__ No _____
Several method blanks were run just slightly over the 12 hour limit. This has not impacted client data.

III. INSTRUMENT CALIBRATION – GC/MS

A. Initial Calibration

1. The Response (RF) and Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the contract criteria of > 0.05 or > 0.01 for poor responding volatiles.
Yes __X__ No _____ NA _____
Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common "poor responders." Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."

Most of the low-responding compounds are highly water-soluble and capable of hydrogen bonding with water. This decreases their purge efficiency and results in the relatively low response. The implication of this low purge efficiency is that a relatively low absolute recovery of such compounds is achieved in the purge step of the analysis. If this recovery is consistent, reasonable accuracy and precision can be achieved in a given matrix, which is indicated for the lab matrix by acceptable recoveries in LCS and calibration checks. However, this causes these targets to be more sensitive to matrix variations that impact purge efficiency (such as ionic strength or the presence of varying levels of soluble non-target organic material) than are the more hydrophobic compounds typically analyzed by this method, and as a result they are more likely to exhibit matrix bias.

2a. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for the CCCs.
Yes __X__ No _____ NA _____
This is a method requirement and indicates that the analytical system is in control.

2b. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for all other compounds, the average % RSD was < 15%, or a linear curve was used.
Yes __X__ No _____ NA _____

3. The 12 hour system Performance Check was performed as required in SW-846 and met the QC limits of 80 – 120%.
Yes ____ No __X___ NA _____
For Instrument 6: Dichlorodifluoromethane (33.9%)and chloromethane (27%) are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

B. Continuing Calibrations

1. The midpoint standard was analyzed for each analysis at the required frequency, and the QC criterion of > 0.05 (> 0.01 for CLP 2001 VOA) was met.
Yes __X__ No _____ NA _____
Poor responders met the noted limits.

2. The percent difference (% D) limits of ± 25% were met. The 2001 NFG also allow for 40% D for the "poor responders (pr)". For other compounds, the QAPP notes rejection of detected compounds with % D > 40%.

Yes _____ No __X__ NA _____
There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.

Other outliers were > 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified. The same compounds that were high on instrument 6 tended also to be a bit high in the CCV.
For Instrument 11, 2,2-dichloropropane was high for the 10/19 p.m into 10/20 a.m. CCV. Response factors are acceptable and data are non-detect.
For Instrument 8, 2,2-dichloropropane was high for the 10/18 p.m . CCV. Response factors are acceptable and data are non-detect.

Note: The laboratory flagged various %Ds as outside the laboratory QC limits of 20%: however, the %D's were evaluated using the NFG QC limit of 25% and only detected results equal or greater than 25% were considered for validation.

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
The BFB (VOA) performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes __X__ No _____ NA _____

V. INTERNAL STANDARDS
The Internal Standards met the 100% upper and -50% lower limits criteria, and the Retention times were within the required windows.
Yes __X__ No _____ NA _____

VI. SURROGATE STANDARDS
Surrogate spikes were analyzed with every sample.
Yes __X__ No _____

And met the recovery limits defined in the QAPP , which are the laboratory limits.
Yes _X___ No _____
All surrogate recoveries were within criteria.

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE
A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes __X__ No _____
There are 7 MS/MSD pairs in this set as well as LCS/LCSD pairs. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager. This meets the requirement for 1/20 for field samples.

DR1-6-LA-26-MS	MW-219-LA-26-MS	PMW92-03-LA-26-MS
MW-208A-LA-26-MS	MW-90-LA-26-MS	MW-271-LA-26-MS
MW-143-LA-26-MS		

B. The MS and MSD percent recoveries were within the limits defined in the updated 2011 QAPP, which now references the laboratory limits.
Yes _X___ No _____ NA _____

For MW-219-LA-26, Tetrachloroethane did not meet limits, but the result in the client sample is well over 4 x the spike amount and the data are not qualified as the recovery is not statistically valid.
MW-208-LA-26 and MW-90-LA-26reported chloroform high in the MS at 146% and 134% respectively. The compound is not detected and no qualifier is applied.

C. The MSD relative percent differences (RPD) were within the defined contract limits, which are 30%.
Yes ____ No _X____ NA _____
Qualifiers are added only when the MS or MSD recovery is also out of limits or the RPD exceeds 30%. Data are qualified "JD#", where # is the RPD. As the RPD increases, the matrix precision decreases. All RPD limits are met with the 2 exceptions noted in the table above. As the RPD increases, the precision decreases.
For MW-143-LA-26 the RPD is high (21.4%) for chloroethane per the lab limits, but are within 30%. The MS and MSD are within limits and no qualifier is required.

D. The MS/MSD were client samples.
Yes ___X_ No _____ NA _____

VIII. LABORATORY CONTROL SAMPLE
A. Laboratory Control Sample (LCS) was analyzed for every analysis performed and for every 20 samples.
Yes __X__ No _____

B. The LCS percent recoveries were within the limits defined in the updated 2011 QAPP, which are the laboratory limits. If an LCS and LCSD are analyzed, both samples must have the same compounds out for data to be qualified.
Yes ____ No _X____
The full target list has been spiked. When a high LCS recovery is associated with a non-detect in samples, no qualifier is added since the indicated bias is high. When the target is detected, data are qualified "JL#", where # is the recovery. Data could be biased low proportional to the LCS percent recovery or false non-detected data could be reported. Both an LCS and LCSD was reported when there is no MS/MSD.

The LCS/LCSD for Instrument 6, SDG 17100637 on 10/18/17 reported a high RPD (36.3) for bromomethane and chloroethane (37.3%). The LCS and LCSD %R's were within limits and no qualifier is applied.
The %R for chloromethane and vinyl chloride were high. As no data were detected for these analytes, no qualifier is applied.

The LCS/LCSD for Instrument 8 in SDG 17100637, 10/18/17 was high for 1,2 dichloroethene; cis, 1,2 dichloroethene, and vinyl chloride. As no data were detected for these analytes, no qualifier is applied.

IX. BLANKS
A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.
Yes __X__ No _____

B. No blank contamination was found in the Method Blank.
Yes ___X__ No ____
Whenever Methylene Chloride, Acetone, 2-Butanone are detected in associated samples at a level less than 10 × the Method Blank (corrected for dilution), data are qualified "BMB#", where # is the corrected Method Blank level. All method blanks were reported as non-detect. Laboratory blanks are applied with the appropriate sample dilution factor.

C. If Field Blanks were identified, no blank contamination was found.
Yes _____ No __X___ NA ____

There are 5 trip blank which had no detections except for TB-4 which reported acetone at 2.87 ug/L. Data for samples collected on 10/10/2017 are qualified BTB#, where # is the detected result. Data are usable as non-detected values.

Lab ID	Client ID	Analyte	Result ug/L	MDL	DSA
L17100710-01	DR2-3-LA-26	Acetone	4.11	2.5	BTB2.87
L17100710-02	DUP-10-LA-26	Acetone	2.91	2.5	BTB2.87
L17100710-05	MW-25A-LA-26	Acetone	2.59	2.5	BTB2.87
L17100710-06	MW-39A-LA-26	Acetone	11.9	2.5	BTB2.87
L17100710-09	MW-97-LA-26	Acetone	14.7	2.5	BTB2.87
L17100710-10	MW-203B-LA-26	Acetone	12.2	2.5	BTB2.87
L17100710-11	MW-259-LA-26	Acetone	13.1	2.5	BTB2.87
L17100710-13	MW-274-LA-26	Acetone	3.17	2.5	BTB2.87
L17100710-14	MW-277-LA-26	Acetone	4.18	2.5	BTB2.87
L17100710-15	DUP-7-LA-26	Acetone	8.98	2.5	BTB2.87
L17100710-16	MW-253-LA-26	Acetone	9.08	2.5	BTB2.87

X. FIELD QC

If Field Duplicates were identified, they met guidance for VOA of RPD of < 30% for water or < 50% for soil. For values reported at < 5 × the reporting limit (RL), a difference of 2 × RL or 3.5 × RL for soil is used as guidance. This is referred to as the CRDL Rule. Data are not qualified for Field Duplicates as these are evaluated for the total project by the Project Manager.

Yes __X___ No ____ NA _____

There are 14 identified field duplicates. The times for DUP-9 and MW-214A are 14:30 and 13:47. The time for MW 198 is noted as 14:30, but the analyte precision is not within limits. The client-identified pair in the table has been used and is acceptable. All field duplicates met precision criteria.

DR1-5-LA-26	DUP-1
DR2-1-LA-26	DUP-2
MW-62-LA-26	DUP-3
MW-64-LA-26	DUP-4
MW-94A-LA-26	DUP-5
MW-100B-LA-26	DUP-6
MW-253-LA-26	DUP-7
MW-203A-LA-26	DUP-8
MW-214A-LA-26	DUP-9
MW-261-LA-26	DUP-10
MW-262-LA-26	DUP-11
MW-275-LA-26	DUP-12
MW-283-LA-26	DUP-13
MW-96-LA-26	DUP-14

XI. SYSTEM PERFORMANCE

A. The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.

Yes _____ No _____ NA __X__

Not part of this review level.

B. The suggested EQLs for the sample matrices in this set were met.
Yes __X__ No _____ NA _____

XII. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable after consideration of qualifiers. The following is noted:
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations.

The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8026B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

Sample Integrity

Fifteen samples arrived with integrity issues. EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be equal to or less than 6 °C. The sample temperature conditions are fully compliant with applicable regulations.
The client was contacted and any vials with full integrity were used for analysis. Only 2 samples are considered to be possibly biased low or contaminated due to headspace as there was no unaffected vial: Dup-6 and TB-3 Data are qualified 'JP' to indicate integrity issues.

Calibrations

Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common "poor responders." Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."

ICV and CCV

There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.
For Instrument 6: Dichlorodifluoromethane (33.9%)and chloromethane (27%) are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Matrix Spikes

There are 7 MS/MSD pairs in this set as well as LCS/LCSD pairs. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager. This meets the requirement for 1/20 for field samples.
For MW-219-LA-26, Tetrachloroethane did not meet limits, but the result in the client sample is well over 4 x the spike amount and the data are not qualified as the recovery is not statistically valid.
MW-208-LA-26 and MW-90-LA-26reported chloroform high in the MS at 146% and 134% respectively. The compound is not detected and no qualifier is applied.

For MW-143-LA-26 the RPD is high (21.4%) for chloroethane per the lab limits, but are within 30%. The MS and MSD are within limits and no qualifier is required.

Laboratory Control Samples

The LCS/LCSD for Instrument 6, SDG 17100637 on 10/18/17 reported a high RPD (36.3) for bromomethane and chloroethane (37.3%) . The LCS and LCSD %R's were within limits and no qualifier is applied.

The %R for chloromethane and vinyl chloride were high. As no data were detected for these analytes, no qualifier is applied.

The LCS/LCSD for Instrument 8 in SDG 17100637, 10/18/17 was high for 1,2 dichloroethene;, cis, 1,2 dichloroethene, and vinyl chloride. As no data were detected for these analytes, no qualifier is applied.

Field Blanks

There are 5 trip blank which had no detections except for TB-4 which reported acetone at 2.87 ug/L. Data for samples collected on 10/10/2017 are qualified BTB#, where # is the detected result. Data are usable as non-detected values.

Field QC

There are 14 identified field duplicates. The times for DUP-9 and MW-214A are 14:30 and 13:47. The time for MW 198 is noted as 14:30, but the analyte precision is not within limits. The client-identified pair in the table has been used and is acceptable. All field duplicates met precision criteria.

TABLE OF QUALIFIED DATA

Lab ID	Client ID	Analyte	Result ug/L	MDL	DSA
L17100710-01	DR2-3-LA-26	Acetone	4.11	2.5	BTB2.87

Final Data Qualification and Usability Report

Project:	Defense Depot Memphis, TN (DDMT) Main Installation Long Term Monitoring
Sampling Event:	LA-26
Project / Task Number:	10021503-228-235772-005
Sample Data Package(s):	L17100514, L17100636, L17100637, L17100710, L17100839
Data Validation Performed by:	Diane Short & Associates (DSA)
Final Data Qualification and Usability Report Prepared by:	Lynn K. Lutz, HDR Inc.

Data Validation Report Review and Comments

The validation report was acceptable except as noted below for final qualifiers.

The validator, in discussing relative response factors, noted that "[t]he laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for 'poor responders.'" The Project Chemist reviewed the area counts for the lowest standard included in the initial calibration for the low responders and found the areas to be adequate, and no qualifiers were applied.

The validator did not qualify a number of analytes based on low or high responses in the CCV; the PC evaluated the %D values and qualified associated results as estimated "J" for high or low results or non-detect estimated "UJ" for non-detect low results, as both the project QAPP and the method require CCV results be within 20%D:

- Chloromethane - workgroup # WG633719: %D = -20.2% (UJ)
- Dichlorodifluoromethane - workgroup # WG634168: %D = +22.8% (none, all ND)
- Dichlorodifluoromethane - workgroup # WG634400: %D = +25.9% (none, all ND)
- 2,2-Dichloropropane - workgroup # WG634436: %D = +32.1% (none, all ND)
- Acetone - workgroup # WG634436: %D = -21.6% (1 UJ, 4 J-)
- Dichlorodifluoromethane - workgroup # WG634436: %D = +23.1% (none, all ND)
- Dichlorodifluoromethane - workgroup # WG634505: %D = +21.4% (none, all ND)
- Hexachlorobutadiene - workgroup # WG634606: %D = +20.4% (none, all ND)
- 2,2-Dichloropropane - workgroup # WG634645: %D = +55.1% (none, all ND)
- Dichlorodifluoromethane - workgroup # WG634775: %D = +26.8% (none, all ND)
- 2-Chlorotoluene - workgroup # WG635230: %D = -20.7% (1 UJ)

The validator noted that all three vials of samples DUP6-LA-26 and LTM-TB3-LA-26 had headspace, and were "considered to be possibly biased low or contaminated." This is actually only

true for the trip blank. For the field duplicate, the HDR chemist instructed the lab to use one of the vials from the parent sample, MW-100B-LA-26, and analyze it as the FD. The parent sample vial did not have headspace and no qualification was required for the FD.

Final Data Qualifiers

The final qualifiers were UJ or J where DSA had not qualified for calibration issues as noted above, for these analytes:

Chloromethane – 10 samples (UJ)
Acetone – 4 samples (UJ)
Acetone – 1 sample (J-)
2-Chlorotoluene - 1 sample (UJ)

The final qualifier for all analytes in sample DUP6-LA-26 was "no qualifier" where DSA had qualified as JP to indicate integrity issues due to sample vial headspace, as noted in the section above.

The final qualifier for all analytes in sample LTM-TB3-LA-26 was UJ where DSA had qualified as JP to indicate integrity issues due to sample vial headspace, as noted in the section above.

The final qualifier for acetone in seven samples was 10.0 U where DSA had qualified as BTB2.87 for acetone in the trip blank. Sample results were less than the reporting limit (RL) and qualified as non-detect at the reporting limit.

The final qualifier for acetone in one sample was 10.0 U where DSA had not qualified for acetone in the trip blank. The sample result was less than the reporting limit (RL) and qualified as non-detect at the RL.

The final qualifier for acetone in four samples was "no qualification" where DSA had qualified as BTB2.87 for acetone in the trip blank. Sample results were greater than two times the blank concentration.

The final qualifier was J where the lab had qualified as F.

Data Usability

There were no rejected sample results. All results are usable as qualified.

ORGANIC DATA QUALITY REVIEW REPORT
Volatile Organics by SW-846 Method 8260B (GC/MS)

SDG	L1704: 1200, 1203
PROJECT	Memphis Defense Depot, ODLB14 Sampling for HDR, Denver
LABORATORY	Microbac Laboratories, Inc., Marietta, OH
SAMPLE MATRIX	Water
SAMPLING DATE	04/ 2017
NUMBER OF SAMPLES	108 samples, including 9 field duplicates, 3 trip blanks, and 5 MS/MSDs
ANALYSES REQUESTED	SW-846 8260B (VOA by GC/MS)
SAMPLE NUMBER	See result forms attached and associated EDD

DATA REVIEWER: Diane Short

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: __ DLS 05/19/2017

Telephone Logs included Yes____ No __X_

Contractual Violations Yes____ No __X_

The project QAPP (09/11), the EPA Contract Laboratory Program National Functional Guidelines for Organic Review, 1999 and 2010, and the SW-846 Method 8260B have been referenced by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes Level III validation of all chains of custody, calibrations and QC forms referencing the QC limits in the above documents.

I. DELIVERABLES

A. All deliverables were present as specified in the Statement of Work (SOW), SW-846, or in the project contract.
Yes __X__ No _____
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations. The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8260B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

B. Chain of Custody documentation was complete and accurate.
Yes __X__ No _____

C. Samples were received at the required temperature, preservation and intact with no bubbles.
Yes __X__ No _____
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be equal to or less than 6 °C. The sample temperature conditions are fully compliant with applicable regulations.

II. ANALYTICAL REPORT FORMS

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes __X__ No _____

B. Holding Times
1. The contract holding times were met for all analyses [time of sample receipt to time of analysis (VOA) or time of extraction to time of analysis].
Yes __X__ No _____

2. The Clean Water Act (40 CFR 136) or method holding times were met for all analyses (14 days from time of sample collection to analysis or extraction).
Yes __X__ No _____
Several method blanks were run just slightly over the 12 hour limit. This has not impacted client data.

III. INSTRUMENT CALIBRATION – GC/MS

A. Initial Calibration
1. The Response (RF) and Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the contract criteria of > 0.05 or > 0.01 for poor responding volatiles.
Yes ___X_ No _____ NA _____
Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common “poor responders.” Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for “poor responders.”

Most of the low-responding compounds are highly water-soluble and capable of hydrogen bonding with water. This decreases their purge efficiency and results in the relatively low response. The implication of this low purge efficiency is that a relatively low absolute recovery of such compounds is achieved in the purge step of the analysis. If this recovery is consistent, reasonable accuracy and precision can be achieved in a given matrix, which is indicated for the lab matrix by acceptable recoveries in LCS and calibration checks. However, this causes these targets to be more sensitive to matrix variations that impact purge efficiency (such as ionic strength

or the presence of varying levels of soluble non-target organic material) than are the more hydrophobic compounds typically analyzed by this method, and as a result they are more likely to exhibit matrix bias.

Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There is not anything in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

2a. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for the CCCs.
Yes __X__ No _____ NA _____
This is a method requirement and indicates that the analytical system is in control.

2b. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for all other compounds, the average % RSD was < 15%, or a linear curve was used.
Yes __X__ No _____ NA _____

3. The 12 hour system Performance Check was performed as required in SW-846 and met the QC limits of 80 – 120%.
Yes ____ No __X___ NA _____
Instrument 17: Dichlorodifluoro and Trichlorofluoro methane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.
For Instrument 11: Dichlorodifluoromethane and chloromethane are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

B. Continuing Calibrations
1. The midpoint standard was analyzed for each analysis at the required frequency, and the QC criterion of > 0.05 (> 0.01 for CLP 2001 VOA) was met.
Yes __X__ No _____ NA _____
Poor responders met the noted limits .

2. The percent difference (% D) limits of ± 25% were met. The 2001 NFG also allow for 40% D for the "poor responders (pr)". For other compounds, the QAPP notes rejection of detected compounds with % D > 40%.
Yes _____ No __X__ NA _____
There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.
Instrument 17 for dichlorodifluoromethane (29.9%).
Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Note: The laboratory flagged various %Ds as outside the laboratory QC limits of 20%: however, the %Ds were evaluated using the NFG QC limit of 25% and only detected results equal or greater than 25% were considered for validation.

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
The BFB (VOA) performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes __X__ No _____ NA _____

V. INTERNAL STANDARDS

The Internal Standards met the 100% upper and -50% lower limits criteria, and the Retention times were within the required windows.
Yes __X__ No _____ NA _____

VI. SURROGATE STANDARDS
Surrogate spikes were analyzed with every sample.
Yes __X__ No _____

And met the recovery limits defined in the QAPP , which are the laboratory limits.
Yes _X___ No _____
All surrogates recoveries were within criteria.

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE
A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes __X__ No _____
All MS/MSD samples were associated with the client samples and are identified as (all ending in ODLB-14) MW-247, MW-225, MW-080, MW-130, MW165. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.

B. The MS and MSD percent recoveries were within the limits defined in the updated 2011 QAPP, which now references the laboratory limits.
Yes ____ No _X____ NA _____
The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.

SAMPLE ID	CLIENT ID	ANALYTE	Result ug/L	MDL	DSA Q
L17041200-56	MW-247-ODLB-14	2,2-Dichloropropane	U	0.25	JMS43
L17041203-19	MW-130-ODLB-14	Trichloroethene	49.1	0.25	JMS53

C. The MSD relative percent differences (RPD) were within the defined contract limits, which are 30%.
Yes __X__ No _____ NA _____
Qualifiers are added only when the MS or MSD recovery is also out of limits or the RPD exceeds 30%. Data are qualified “JD#”, where # is the RPD. As the RPD increases, the matrix precision decreases. All RPD limits are me. As the RPD increases, the precision decreases.

D. The MS/MSD were client samples.
Yes __X__ No _____ NA _____

VIII. LABORATORY CONTROL SAMPLE
A. Laboratory Control Sample (LCS) was analyzed for every analysis performed and for every 20 samples.
Yes __X__ No _____

B. The LCS percent recoveries were within the limits defined in the updated 2011 QAPP, which are the laboratory limits. If an LCS and LCSD are analyzed, both samples must have the same compounds out for data to be qualified.
Yes __X__ No _____
The full target list has been spiked. When a high LCS recovery is associated with a non-detect in samples, no qualifier is added since the indicated bias is high. When the target is detected, data are qualified “JL#”,

where # is the recovery. Data could be biased low proportional to the LCS percent recovery or false non-detected data could be reported.

IX. BLANKS

A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.
Yes __X__ No _____

B. No blank contamination was found in the Method Blank.
Yes ___X__ No ____
Whenever Methylene Chloride, Acetone, 2-Butanone are detected in associated samples at a level less than 10 × the Method Blank (corrected for dilution), data are qualified "BMB#", where # is the corrected Method Blank level. All method blanks were reported as non-detect. Laboratory blanks are applied with the appropriate sample dilution factor.

C. If Field Blanks were identified, no blank contamination was found.
Yes _____ No _X____ NA ____
There are 3 trip blanks and one equipment blank. The trip blanks report no detections. They were only in SDG L1704203. The equipment blank was specified as applying to only MW08. This blank has low level compounds 1,4 dichlorobenzene, acetone, chloroform, ethyl benzene and toluene. Acetone and chloroform required qualification in the one sample. Data are fully usable as non-detected results. Field blanks are applied directly without applying a dilution factor.

SAMPLE ID	CLIENT ID	ANALYTE	Result ug/L	MDL	DSA Q
L17041203-26	MW-08-ODLB-14	Acetone	3.44	2.5	BEB7.42
L17041203-26	MW-08-ODLB-14	Chloroform	0.241	0.125	BEB.492

X. FIELD QC

If Field Duplicates were identified, they met guidance for VOA of RPD of < 30% for water or < 50% for soil. For values reported at < 5 × the reporting limit (RL), a difference of 2 × RL or 3.5 × RL for soil is used as guidance. This is referred to as the CRDL Rule. Data are not qualified for Field Duplicates as these are evaluated for the total project by the Project Manager.
Yes ___X__ No ____ NA _____

There are 9 identified field duplicates as described in the following table. If data were qualified they would be JFD#, where # is the RPD. As the RPD increases, the precision decreases. There are low level or non-detect results which would usually be qualified for the difference between the two values as one of the values is less than 5 x RL. These were within limits for these samples. All RPDs were acceptable or differences between low level values were less than 2 x RL.

MW-08-ODLB-14	DUP-1
MW-68-ODLB-14	DUP-2
MW-91-ODLB-14	DUP-3
MW-150-ODLB-14	DUP-4
MW-171-ODLB-14	DUP-5
MW-187-ODLB-14	DUP-6
MW-222-ODLB-14	DUP-7
MW-246-ODLB-14	DUP-8
MW-250-ODLB-14	DUP-9

XI. SYSTEM PERFORMANCE

A. The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.

Yes _____ No _____ NA __X__

Not part of this review level. It is noted, however, that Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There was nothing in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but this cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

B. The suggested EQLs for the sample matrices in this set were met.

Yes __X__ No _____ NA _____

XII. OVERALL ASSESSMENT OF THE CASE

The laboratory has complied with the requested method. Data are fully usable after consideration of qualifiers. The following is noted:

This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations.

The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8026B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

Calibrations

Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common "poor responders." Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."

Instrument 11 is a bit of an anomaly. The Response Factors are about 2 x those of all the other instruments. There is not anything in the tune data that would reflect that large a difference and the IS 's are the same for all of them (eg Fluorobenzene for acetone). This maybe a newer instrument with different columns but cannot be determined from this level of review. It does mean higher sensitivity for just that instrument.

ICV and CCV

There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.

Instrument 17: Dichlorodifluoro and Trichlorofluoro methane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

For Instrument 11: Dichlorodifluoromethane and chloromethane are slightly high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

Instrument 17 for dichlorodifluoromethane (29.9%).

Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Matrix Spikes

The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.

All MS/MSD samples were associated with the client samples and are identified as (all ending in ODLB-14) MW-247, MW-225, MW-080, MW-130, MW165. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.

The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery.

Field Blanks

There are 3 trip blanks and one equipment blank. The trip blanks report no detections. They were only in SDG L1704203. The equipment blank was specified as applying to only MW08. This blank has low level compounds 1,4 dichlorobenzene, acetone, chloroform, ethyl benzene and toluene. Acetone and chloroform required qualification in the one sample. Data are fully usable as non-detected results. Field blanks are applied directly without applying a dilution factor.

Field QC

There are 9 identified field duplicates as described in the following table. All RPDs were acceptable or differences between low level values were less than 2 x RL with the one exception noted below.

TABLE OF QUALIFIED DATA

SAMPLE ID	CLIENT ID	ANALYTE	Result ug/L	MDL	DSA Q
L17041200-56	MW-247-ODLB-14	2,2-Dichloropropane	U	0.25	JMS43
L17041203-19	MW-130-ODLB-14	Trichloroethene	49.1	0.25	JMS53
L17041203-26	MW-08-ODLB-14	Acetone	3.44	2.5	BEB7.42
L17041203-26	MW-08-ODLB-14	Chloroform	0.241	0.125	BEB.492

Final Data Qualification and Usability Report

Project:	Defense Depot Memphis, TN (DDMT) Dunn Field Long Term Monitoring
Sampling Event:	ODLB-14
Project / Task Number:	228-235772-005
Sample Data Package(s):	L17041200, L17041203
Data Validation Performed by:	Diane Short & Associates (DSA)
Final Data Qualification and Usability Report Prepared by:	Lynn K. Lutz, HDR Inc.

Data Validation Report Review and Comments

The validation report was acceptable except as noted below for final qualifiers.

The validator, in discussing relative response factors, noted that "[t]he laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for 'poor responders.'" The Project Chemist reviewed the area counts for the lowest standard included in the initial calibration for the low responders and found the areas to be adequate, and no qualifiers were applied.

The validator did not qualify a number of analytes based on low or high responses in the CCV; the PC evaluated the %D values and qualified associated results as estimated "J-" for low results or non-detect estimated "UJ" for non-detect low results, as both the project QAPP and the method require CCV results be within 20%D:

- Chloromethane - workgroup # WG611925: %D = -21.7% (UJ)
- Bromomethane - workgroup # WG612030: %D = -25.5% (UJ)
- Bromomethane - workgroup # WG612123: %D = -24.5% (UJ)
- Acetone - workgroup # WG612142: %D = -21.6% (J-/UJ)
- Bromomethane - workgroup # WG612250: %D = -21.2% (UJ)
- Chloromethane - workgroup # WG612551: %D = +20.4% (none, all ND)
- Acetone - workgroup # WG612551: %D = -22.6% (J-/UJ)
- Dichlorodifluoromethane - workgroup # WG612551: %D = +29.9% (none, all ND)

Final Data Qualifiers

The final qualifiers were UJ or J- where DSA had not qualified for calibration issues as noted above, for these analytes:

Bromomethane – 41 samples (UJ)
Chloromethane – 12 samples (UJ)

Acetone – 4 samples (UJ)
Acetone – 11 samples (J-)

The final qualifier for 2,2-dichloropropane in sample MW-247-ODLB-14 was non-detect estimated UJ where DSA had qualified JMS43 for low MS/MSD recoveries.

The final qualifier for trichloroethene in MW-130-ODLB-14 was estimated J where DSA had qualified as JMS53 for low MS/MSD recoveries.

The final qualifier for acetone in sample MW-08-ODLB-14 was 10.0 U where DSA had qualified as BEB7.42 for acetone in the equipment blank. The sample result was less than the reporting limit (RL) and qualified as non-detect at the RL.

The final qualifier for chloroform in sample MW-08-ODLB-14 was 0.300 U where DSA had qualified as BEB.492 for chloroform in the equipment blank. The sample result was less than the reporting limit (RL) and qualified as non-detect at the RL.

The final qualifier was J where the lab had qualified as F.

Data Usability

There were no rejected sample results. All results are usable as qualified.

ORGANIC DATA QUALITY REVIEW REPORT
Volatile Organics by SW-846 Method 8260B (GC/MS)

SDG	L17100532
PROJECT	Memphis Defense Depot, Off depot ODLS-15, Sampling for HDR, Denver
LABORATORY	Microbac Laboratories, Inc., Marietta, OH
SAMPLE MATRIX	Water SAMPLING DATE 10/ 5,6/ 2017
NUMBER OF SAMPLES	21 samples, including 2 field duplicates, 1 trip blank and 1 MS/MSD
ANALYSES REQUESTED	SW-846 8260B (VOA by GC/MS)
SAMPLE NUMBER	See result forms attached and associated EDD

DATA REVIEWER: Diane Short

QA REVIEWER: Diane Short & Associates, Inc. INITIALS/DATE: __ DLS 10/26/2017

Telephone Logs included Yes____ No __X_

Contractual Violations Yes____ No __X_

The project QAPP (09/11), the EPA Contract Laboratory Program National Functional Guidelines for Organic Review, 1999 and 2010, and the SW-846 Method 8260B have been referenced by the reviewer to perform this data validation review. The EPA qualifiers have been expanded to include a descriptor code and value to define QC violations and their values, per the approval of the Project Manager. Per the Scope of Work, the review of these samples includes Level III validation of all chains of custody, calibrations and QC forms referencing the QC limits in the above documents.

I. DELIVERABLES

A. All deliverables were present as specified in the Statement of Work (SOW), SW-846, or in the project contract.
Yes __X__ No _____
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations. The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8260B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

B. Chain of Custody documentation was complete and accurate.
Yes __X__ No _____
Note that the log-in report contains several samples that are not on the COC or have been designated as part of this review.

C. Samples were received at the required temperature, preservation and intact with no bubbles.
Yes ____ No __X___
EPA regulations (See Federal Register, March 12, 2007, 40CFR Part 122) require only that the temperature of samples delivered to the laboratory be equal to or less than 6 °C. The sample temperature conditions are fully compliant with applicable regulations.

The following samples were noted in log-in as having integrity issues. In all cases, a viable vial was used for analyses.

Sample	Log-in
MW-163-ODLS-15	2 vials, cracked lids; samples intact
DUP-1-ODLS-15	1 of 3 vials, bubbles > 6 mm
MW-165-ODLS-15	2 of 3 vials, bubbles > 6 mm
TB-1-ODLS-15	2 of 3 vials, bubbles > 6 mm

II. ANALYTICAL REPORT FORMS

A. The Analytical Report or Data Sheets are present and complete for all requested analyses.
Yes __X__ No _____

B. Holding Times
1. The contract holding times were met for all analyses [time of sample receipt to time of analysis (VOA) or time of extraction to time of analysis].
Yes __X__ No _____

2. The Clean Water Act (40 CFR 136) or method holding times were met for all analyses (14 days from time of sample collection to analysis or extraction).
Yes __X__ No _____
Several method blanks were run just slightly over the 12 hour limit. This has not impacted client data.

III. INSTRUMENT CALIBRATION – GC/MS

A. Initial Calibration
1. The Response (RF) and Relative Response Factors (RRF) and average RRF for all compounds for all analyses met the contract criteria of > 0.05 or > 0.01 for poor responding volatiles.
Yes ___X_ No _____ NA _____
Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common “poor responders.” Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for

this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."

Most of the low-responding compounds are highly water-soluble and capable of hydrogen bonding with water. This decreases their purge efficiency and results in the relatively low response. The implication of this low purge efficiency is that a relatively low absolute recovery of such compounds is achieved in the purge step of the analysis. If this recovery is consistent, reasonable accuracy and precision can be achieved in a given matrix, which is indicated for the lab matrix by acceptable recoveries in LCS and calibration checks. However, this causes these targets to be more sensitive to matrix variations that impact purge efficiency (such as ionic strength or the presence of varying levels of soluble non-target organic material) than are the more hydrophobic compounds typically analyzed by this method, and as a result they are more likely to exhibit matrix bias.

2a. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for the CCCs.
Yes __X__ No _____ NA _____
This is a method requirement and indicates that the analytical system is in control.

2b. The relative standard deviation (RSD) for the five point calibration was within the 30% limit for all other compounds, the average % RSD was < 15%, or a linear curve was used.
Yes __X__ No _____ NA _____

3. The 12 hour system Performance Check was performed as required in SW-846 and met the QC limits of 80 – 120%.
Yes ____ No __X___ NA _____
Instrument 6: Dichlorodifluoromethane and Chloromethane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

B. Continuing Calibrations
1. The midpoint standard was analyzed for each analysis at the required frequency, and the QC criterion of > 0.05 (> 0.01 for CLP 2001 VOA) was met.
Yes __X__ No _____ NA _____
Poor responders met the noted limits .

2. The percent difference (% D) limits of ± 25% were met. The 2001 NFG also allow for 40% D for the "poor responders (pr)". For other compounds, the QAPP notes rejection of detected compounds with % D > 40%.
Yes __X___ No ____ NA _____
There are outliers for some of the poor responders, but they meet the 40% limit. Common poor responders: acetone, 2-butanone, MIBK, 2-hexanone, dichlorodifluoromethane, and carbon disulfide.
Other outliers were < 25% and compounds were non-detected with fully acceptable response factors. No data are detected and none are qualified.

Note: The laboratory flagged various %Ds as outside the laboratory QC limits of 20%: however, the %Ds were evaluated using the NFG QC limit of 25% and only detected results equal or greater than 25% were considered for validation.

IV. GC/MS INSTRUMENT PERFORMANCE CHECK
The BFB (VOA) performance check was injected once at the beginning of each 12-hour period and relative abundance criteria for the ions were met.
Yes __X__ No _____ NA _____

V. INTERNAL STANDARDS
The Internal Standards met the 100% upper and -50% lower limits criteria, and the Retention times were within the required windows.
Yes __X__ No _____ NA _____

VI. SURROGATE STANDARDS
Surrogate spikes were analyzed with every sample.
Yes __X__ No _____

And met the recovery limits defined in the QAPP , which are the laboratory limits.
Yes _X___ No _____
All surrogates recoveries were within criteria.

VII. MATRIX SPIKE/MATRIX SPIKE DUPLICATE
A. Matrix Spike (MS) and Matrix Spike Duplicate (MSD) were analyzed for every analysis performed and for every 20 samples or for every matrix whichever is more frequent.
Yes __X__ No _____
All MS/MSD samples were associated with the client samples and are identified as MW163- ODLS-15. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.

B. The MS and MSD percent recoveries were within the limits defined in the updated 2011 QAPP, which now references the laboratory limits.
Yes _X___ No _____ NA _____
The full target list has been spiked. The laboratory limits have been met, with the following exceptions. It is noted that the limits are fairly wide. Data are qualified JMS#, where # is the %R. Data could be biased low proportional to the recovery. No data are qualified.

C. The MSD relative percent differences (RPD) were within the defined contract limits, which are 30%.
Yes __X__ No _____ NA _____
Qualifiers are added only when the MS or MSD recovery is also out of limits or the RPD exceeds 30%. Data are qualified "JD#", where # is the RPD. As the RPD increases, the matrix precision decreases. All RPD limits are me. As the RPD increases, the precision decreases.

D. The MS/MSD were client samples.
Yes __X__ No _____ NA _____

VIII. LABORATORY CONTROL SAMPLE
A. Laboratory Control Sample (LCS) was analyzed for every analysis performed and for every 20 samples.
Yes __X__ No _____

B. The LCS percent recoveries were within the limits defined in the updated 2011 QAPP, which are the laboratory limits. If an LCS and LCSD are analyzed, both samples must have the same compounds out for data to be qualified.
Yes __X__ No _____
The full target list has been spiked. When a high LCS recovery is associated with a non-detect in samples, no qualifier is added since the indicated bias is high. When the target is detected, data are qualified "JL#", where # is the recovery. Data could be biased low proportional to the LCS percent recovery or false non-detected data could be reported.

IX. BLANKS
A. Method Blanks were analyzed at the required frequency and for each matrix and analysis.

Yes __X__ No _____

B. No blank contamination was found in the Method Blank.
Yes ___X__ No ____
Whenever Methylene Chloride, Acetone, 2-Butanone are detected in associated samples at a level less than 10 × the Method Blank (corrected for dilution), data are qualified "BMB#", where # is the corrected Method Blank level. All method blanks were reported as non-detect. Laboratory blanks are applied with the appropriate sample dilution factor.

C. If Field Blanks were identified, no blank contamination was found.
Yes __X___ No _____ NA ____
There is 1 trip blank. The trip blank reports no detections.

X. FIELD QC
If Field Duplicates were identified, they met guidance for VOA of RPD of < 30% for water or < 50% for soil. For values reported at < 5 × the reporting limit (RL), a difference of 2 × RL or 3.5 × RL for soil is used as guidance. This is referred to as the CRDL Rule. Data are not qualified for Field Duplicates as these are evaluated for the total project by the Project Manager.
Yes ___X__ No ____ NA _____

There are 2 identified field duplicate pairs as described in the following table. If data were qualified they would be JFD#, where # is the RPD. As the RPD increases, the precision decreases. There are low level or non-detect results which would usually be qualified for the difference between the two values as one of the values is less than 5 x RL. These were within limits for these samples. All RPDs were acceptable or differences between low level values were less than 2 x RL.

MW-87-ODLS-15	DUP-1
MW-149-ODLS-15	DUP-2

XI. SYSTEM PERFORMANCE
A. The RICs, chromatograms, tunes and general system performance were acceptable for all instruments and analytical systems.
Yes _____ No _____ NA __X__
Not part of this review level.

B. The suggested EQLs for the sample matrices in this set were met.
Yes __X__ No _____ NA _____

XII. OVERALL ASSESSMENT OF THE CASE
The laboratory has complied with the requested method. Data are fully usable after consideration of qualifiers. The following is noted:
This report has been requested to include the following review: QC, hold times, sample integrity (Chains of Custody, sample login), and summary calibrations.

The 2011 QAPP has been used for all review with the exception of the CCAL limits where the 25% NFG limits were applied as Method 8026B was used, not 8260C or the CLP method. Final application of these limits is being considered by project management.

<u>Sample Integrity</u>
The following samples were noted in log-in as having integrity issues. In all cases, a viable vial was used for analyses.

Sample	Log-in
MW-163-ODLS-15	2 vials, cracked lids; samples intact
DUP-1-ODLS-15	1 of 3 vials, bubbles > 6 mm
MW-165-ODLS-15	2 of 3 vials, bubbles > 6 mm
TB-1-ODLS-15	2 of 3 vials, bubbles > 6 mm

Calibrations

Method 8260: Per the Project Manager, the 2001 EPA CLP validation guidance has been applied to the common "poor responders." Calibration response factors below 0.05 have historically been observed for Acetone, 2 hexanone, 2-butanone, carbon disulfide or 4-methyl-2-pentanone. The validation guidance used for this project allows for a response of 0.01 for these compounds if spectral integrity can be verified at low concentrations. These spectra are not commonly provided and are not part of the deliverable for this data set. The laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for "poor responders."

ICV and CCV

Instrument 6: Dichlorodifluoromethane and Chloromethane are high in the ICV. No qualification is required as the response factor is acceptable to verify the non-detects or data are qualified for the CCAL.

Matrix Spikes

All MS/MSD samples were associated with the client samples and are identified as MW163- ODLS-15. This meets the recommendation of 1 per 20 field samples. As this is an ongoing project an overall adherence to the 1:20 frequency is monitored by the Project Manager.

Field Blanks

There is 1 trip blank. The trip blank reports no detections.

Field QC

There are 2 identified field duplicate pairs as described in the following table.

MW-87-ODLS-15	DUP-1
MW-149-ODLS-15	DUP-2

TABLE OF QUALIFIED DATA

No data are qualified.

Final Data Qualification and Usability Report

Project:	Defense Depot Memphis, TN (DDMT) Dunn Field Long Term Monitoring
Sampling Event:	ODLS-15
Project / Task Number:	10021503 - 228-235772-005
Sample Data Package(s):	L17100532
Data Validation Performed by:	Diane Short & Associates (DSA)
Final Data Qualification and Usability Report Prepared by:	Lynn K. Lutz, HDR Inc.

Data Validation Report Review and Comments

The validation report was acceptable except as noted below for final qualifiers.

The validator, in discussing relative response factors, noted that "[t]he laboratory has been tasked with providing to the client verification that the 0.01 RF is valid. If the spectral verification is available, data are not qualified for response factors greater than 0.01 and less than 0.05 for 'poor responders.'" The Project Chemist reviewed the area counts for the lowest standard included in the initial calibration for the low responders and found the areas to be adequate, and no qualifiers were applied.

The validator did not qualify one analyte based on low or high responses in the CCV; the PC evaluated the %D values and qualified associated results as non-detect estimated "UJ" for non-detect low results, as both the project QAPP and the method require CCV results be within 20%D:

- Bromomethane - workgroup # WG633850: %D = -22.7% (UJ)

Final Data Qualifiers

The final qualifiers were UJ where DSA had not qualified for calibration issues as noted above, for these analytes:

- Bromomethane – six samples (UJ)

The final qualifier was J where the lab had qualified as F.

Data Usability

There were no rejected sample results. All results are usable as qualified.

Vinyl chloride		µg/L	<1	<1	<1	<1	<1	<1	<1	<1

Notes:
-- not analyzed
µg/L micrograms per liter
RL reporting limit

DQE Flags:
J Estimated results based on QC data or reported below RL
B Possibly bias high or false positive based on blank data
< Not detected at sample reporting limit
UJ Undetected, RL is inaccurate or imprecise
