Instructions: Complete one checklist per *analytical run* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section, and may require the initiation of a Nonconformance Report.

Requirements:	Acceptance Criteria	Analyst Review		Independent Review		Comments (indicate reference to an attachment if necessary)
		Yes	No	Yes	No	
1. INITIAL CALIBRATION (ICAL)						
a. Was the PCB initial calibration performed using a minimum of five varying standard concentration levels on two dissimilar columns?	Lowest standard at or near MRL	X		X		
b. Is the variation between calibration response factors for all concentration levels <20% RSD, is r^2 >.990, or r > 0.990 for the regression line?	RSD<20%, r^2>0.990, or r>0.990	X		X		
c. Was each ICAL uniquely identified (i.e. Standard Number)?		X		X		
d. Were there Calibration Factors (CF) established for the remaining Aroclors?		X		X		
e. Was an initial calibration blank (ICB) analyzed?		X		X		
2. INITIAL CALIBRATION VERIFICATION (ICV)						
a. Were there second source ICVs for all Aroclors analyzed after the initial calibration and prior to analysis of any samples?		X		X		
b. Were the recoveries for the ICVs within program limits?	Second source	X		X		
c. Was the ICVs uniquely identified (i.e. Standard Number)?	%Recovery	X		X		
3. CONTINUING CALIBRATION VERIFICATION (CCV)						
a. Were CCVs analyzed at the beginning of the sequence, after every 12 hours or every 20 samples (which ever comes first) and at the end of the analytical run? QSM = every ten sample injections.		X		X		
b. Were the recoveries for the CCVs within program limits?	%Recovery	X		X		See below
c. Were confirmed Aroclor detects processed using the appropriate Aroclor method?		X		X		
d. Was each CCV uniquely identified (i.e. Standard Number)?		X		X		

Additional Comments:

There were single point failures on channel B in the ending CCV for 1016 on 09/13/2019

The totals on both channels for all CCVs were within program limits.

No qualifiers were used.

2.1.1.2 QC Summary Data

Example 6020 Calculations
Perkin Elmer NexION 300X

1.0 Initial Calibration (ICAL) Parameters
The system performs linear regression from data consisting of a blank and three standards.

2.0 Calculating the concentration (C) of an element in water using data from prep log, run log, and quantitation report (note:the data system performs this calculation automatically when correction factors have been entered):

$$Cx = Cs \times \frac{Vf}{Vi} \times D$$

Where:	**Example:**
Cs = Concentration computed by the data system (ug/L)	0.1
Vf = Final volume	100
Vi = Initial volume	40
D = Dilution factor as a multiplier (10X = 10)	1
Cx = Concentration of element in (ug/L)	0.25

3.0 Calculating the concentration (C) of an element in soil using data from prep log, run log, and quantitation report (note: the data system performs this calculation automatically when correction factors have been entered):

$$Cx = Cs \times \frac{Vf}{Vi} \times D$$

Where:	**Example:**
Cs = Concentration computed by the data system (ug/L)	0.1
Vf = Final volume	200
Vi = Initial volume	0.5
D = Dilution factor as a multiplier (10X = 10)	1
Cx = Concentration of element in (ug/kg)	40

4.0 Adjusting the concentration to dry weight:

$$Cdry = \frac{Cx \times 100}{Px}$$

Where:	**Example:**
Cx = Concentration calculated as received (wet basis)	40
Px = Percent solids of sample (%wt)	80

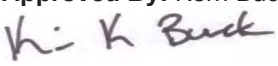
Serial Dilution/Post Digestion Spikes: WG710698 - All acceptance criteria were met.

WG710720 - Lead for client sample 08 was reported from the 10 fold dilution where the 10 fold reference sample was reported for lead.



Matrix Spikes: WG710720 - Sample 08 was chosen by the client for MS/MSD analysis. Samples 09 (MS) and 10 (MSD) yielded noncompliant recoveries for two analytes. For consistency with the reference, samples 09 (MS) and 10 (MSD) were also reanalyzed at a dilution for lead.

SAMPLES

Samples: WG710698 - Client sample 11 required dilution analysis in order to obtain a result for lead within the calibration range.

WG710720 - Client samples 08, 09, 10, and 17 required dilution analyses in order to obtain results for lead within the calibration range.

2.1.1.2 QC Summary Data

Example 6020 Calculations
Perkin Elmer NexION 300X

1.0 Initial Calibration (ICAL) Parameters
The system performs linear regression from data consisting of a blank and three standards.

2.0 Calculating the concentration (C) of an element in water using data from prep log, run log, and quantitation report (note:the data system performs this calculation automatically when correction factors have been entered):

$$Cx = Cs \times \frac{Vf}{Vi} \times D$$

Where:	**Example:**
Cs = Concentration computed by the data system (ug/L)	0.1
Vf = Final volume	100
Vi = Initial volume	40
D = Dilution factor as a multiplier (10X = 10)	1
Cx = Concentration of element in (ug/L)	0.25

3.0 Calculating the concentration (C) of an element in soil using data from prep log, run log, and quantitation report (note: the data system performs this calculation automatically when correction factors have been entered):

$$Cx = Cs \times \frac{Vf}{Vi} \times D$$

Where:	**Example:**
Cs = Concentration computed by the data system (ug/L)	0.1
Vf = Final volume	200
Vi = Initial volume	0.5
D = Dilution factor as a multiplier (10X = 10)	1
Cx = Concentration of element in (ug/kg)	40

4.0 Adjusting the concentration to dry weight:

$$Cdry = \frac{Cx \times 100}{Px}$$

Where:	**Example:**
Cx = Concentration calculated as received (wet basis)	40
Px = Percent solids of sample (%wt)	80
$Cdry$ = Concentration calculated as dry weight (ug/kg)	50

50 ug/kg = 0.050 mg/kg

2.2 General Chemistry Data

2.2.1 Percent Solids Data

2.2.1.1 Raw Data

Example Percent Solids Calculations

1.0 Calculating the percent solids of a sample.

$$\%Solids = \frac{WT3 - WT1}{WT2 - WT1} \times F$$

Where:	
WT1 = Weight, in grams, of the empty container	1.30 g
WT2 = Weight, in grams, of the container and wet sample	21.274 g
WT3 = Weight, in grams, of the container and dried sample	5.21 g
F = Factor to get units as percent weight	100
%Solids = Percent solids present in sample.	19.58%

2.0 Calculating the percent moisture of a sample.

% Moisture = 100 - % Solids from 1.0 calculation

Case Narrative

ARF: 89977

Project: Env. Restoration Support FU4 Garden

Sample Receipt Information:

One water and nineteen soil samples were received August 28, 2019, at 1.9°C. The samples were assigned Analytical Request Form (ARF) number 89977. The sample numbers and requested analyses were compared to the chain of custody. No exception was noted.

Sample Preparation and Analysis:

For the EPA 7199 analysis, the water samples were prepared according to the method, and the soil samples were prepared according to EPA 3060A method.

Only the portion of the injection log relative to these samples is included. A full sequence log is available upon request. Measurement uncertainty can be reported upon request.

Exceptions, Abnormalities and Deviations:

Inorganics: The LCS for the water sample recovered at 89.2%, which meets the significant figure requirement of the lower control limit of 90%.

The laboratory selected sample GN-SO-01-1 for the MS/MSD analysis. The LCS is prepared from a separate source from the calibration.

The middle CCV 09/06/19 18:54 recovered at 88% with a lower control limit of 90%. The previous and subsequent CCVs were acceptable.

Data Quality Evaluation

DATA QUALITY EVALUATION

Garden soil sampling was conducted by HDR at the former Defense Depot Memphis, Tennessee (DDMT) in August 2019. The sampling locations and analyses were selected in accordance with the *Final Garden Soil Sampling Work Plan* (HDR, June 2019).

Soil samples were submitted for analysis to CT Laboratories in Baraboo, Wisconsin for all analyses except hexavalent chromium, which were submitted to APPL Inc. in Clovis, California. Field activities and laboratory analyses were performed in accordance with the *Final Garden Soil Sampling Work Plan* (HDR, June 2019).

The data quality evaluation (DQE) process involves assessment of all field and laboratory procedures for compliance with the QAPP. Data validation was completed by the HDR EOC Senior Chemist. This assessment is designed to evaluate problems with quality assurance (QA)/quality control (QC) associated with the laboratory data and potential impact to the data quality objectives (DQOs). The DQE findings are summarized in the following sections.

FIELD ACTIVITIES AND FIELD QUALITY CONTROL

Garden Soil Sampling, August 2019: The field effort included the collection of 17 soil samples from nine boring locations during the garden soil sampling event in August 2019. An equipment blank was collected and analyzed for all analytes, and a trip blank was analyzed for VOCs. The boring and soil sampling locations are shown on Figure 1 of the report.

Soil samples were collected using Terracore samplers and extruded into one vial containing methanol and into two vials containing volatile-free water and sodium bisulfate preservative.

Field QC samples were collected at selected locations to evaluate sampling technique and decontamination procedures. These samples included field duplicates, trip blanks and field equipment (rinsate) blanks. Additional samples were collected at selected locations for matrix spike/matrix spike duplicate (MS/MSD) analyses in the laboratory. Sample bottles met U.S. Environmental Protection Agency (USEPA) requirements for environmentally clean containers. Sample labels were pre-printed to facilitate sample tracking from the field through the laboratory. Documentation of the sampling was performed in the field to ensure that the samples collected, sample labels, chain-of-custody (COC) records, and request for analysis were consistent. Where necessary, additional COC forms were filled out manually. Custody seals were placed on each sample cooler prior to shipment by common carrier.

ANALYTICAL METHODS

The soil samples were analyzed for:

- volatile organic compounds (VOCs) by Method SW 8260C;
- semivolatile organic compounds (SVOCs) by Method SW8270D;
- low-level polynuclear aromatic hydrocarbons (PAHs) by Method SW8270D-SIM;
- organochlorine pesticides by Method SW8081B;

- polychlorinated biphenyls (PCBs) by Method SW8082A:
- total metals by Methods SW6010C/6020A;
- total mercury by Method SW7471A; and
- hexavalent chromium by Method SW7199.

LABORATORY QUALITY CONTROL

The laboratory QC program, including sample handling, laboratory control, and reporting, is documented in the project QAPP and Work Plan. Sample handling includes documentation of sample receipt, placement in storage, lab personnel using the sample, and disposal. The laboratory control consists of instrument calibration and maintenance, laboratory control samples (LCS), method blanks and matrix spikes. Reporting of the laboratory control data was planned prior to the collection of the data, allowing the laboratory to place the appropriate information into the data package so that the DQE could be performed in a timely manner.

DQE SUMMARY

The objective of the DQE was to provide a review of the chemical data reports submitted by the laboratory and to assess the data in relation to the DQOs stated in the project QAPPs. The DQE consisted of review of laboratory QC data and field QC parameters, and flagging of the data as usable, usable with qualification, or unusable in accordance with the DQE standard operating procedures (SOPs) using the criteria for each analytical method performed. The following information was reviewed:

- Sample Integrity (Deliverables)
- Sample Completeness
- Sample Holding Times
- Laboratory Methods for Extraction and Analysis (Calibration, Internal Standards)
- Method Accuracy (bias) and Precision (Surrogates, MS/MSD, LCS Recoveries)
- Laboratory Performance Criteria (Blanks, Instrument Performance Checks)

Field QC parameters were evaluated through field duplicates, rinsate blanks, field documentation, and shipping criteria.

The DQE was summarized by use of flags that indicate to the reviewer that the data being considered has been qualified using the established criteria. Sample delivery group (SDG) narratives detailing the evaluation of the laboratory data are included as attachments in this Appendix. The SDGs and associated soil samples are listed on Table D-1.

The following sections provide summary discussions of the required data qualifications for each sampling event. A Level III DQE was performed and the data quality indicators (DQIs), expressed in terms of precision, accuracy, representativeness, comparability, completeness,

and sensitivity, were assessed. This included the evaluation of sample integrity, holding times, trip blanks, rinsate blanks, method blanks, internal standards, surrogate recoveries, MS/MSD recoveries, LCSs, and field duplicate precision. The results of the DQI assessment are provided below.

Precision

Field duplicates were collected to assess sampling precision. They consisted of replicate grab samples collected concurrently with the associated field samples. Precision is best expressed in terms of relative percent difference (RPD).

Garden soil sampling event, August 2019: Field precision goals were generally met for the duplicate sample pairs collected during the sampling event for all analyses except PAHs and metals. All PAHs had RPDs outside control limits in one sample pair and most PAHs had RPDs outside control limits in the other sample pair. Most metals had RPDs outside control limits in one sample pair. Two RPDs were high in the LCS/LCSD associated with the QC water samples, but all soil LCS/LCSD RPDs were within control limits. Precision is discussed in more detail in the attached narratives.

Accuracy

Accuracy or bias was measured through the analyses of LCSs and MS/MSDs. Sample specific accuracy is measured through surrogate recovery. Accuracy is expressed as percent recovery (%R). Field and laboratory blanks are analyzed to assess potential bias in the reported sample results. Bias is expressed through qualification of analytical results.

Sample results are evaluated against blank results as described in the *General Data Validation Guidelines* (United States Department of Defense [DoD] Environmental Data Quality Workgroup [EDQW], February 09, 2018). Sample results with concentration of an analyte less than the RL and less than the concentration in an associated blank (or less than two times the concentration in the blank for common laboratory contaminants acetone, 2-butanone [MEK] and methylene chloride) are reported as non-detect at the standard Limit of Quantitation (LOQ). Sample results greater than the blank result (or greater than two times for common laboratory contaminants) are not considered to have been greatly affected and are not qualified.

Garden soil sampling event, August 2019: Although there were two high LCS recoveries and two low LCS recoveries observed in the event, for the soil samples, only two SVOC analytes required qualification. Three MS/MSD recoveries were high and 31 MS/MSD recoveries were low. Four of the MS/MSD SVOC recoveries were below 10%, resulting in rejection of those analytes in the parent sample. Further discussion of the LCS and MS/MSD recoveries is provided in the attached DQE narratives.

Although there were trace level detections of pyrene, aluminum, copper, and hexavalent chromium in the method blanks, sample results did not require qualification. Although there were trace level detections of chloromethane and methylene chloride in the trip blank, samples did not require qualification, as these analytes were not detected in the samples. Although there were trace level detections of naphthalene, sodium, calcium, aldrin, ethylbenzene, o-xylene,

m/p-xylene, acetone, chloromethane, styrene, toluene, and 2-butanone in the rinse blank, samples were not qualified, these analytes were either not detected in the samples or were detected at trace levels and already qualified as estimated (J). Further discussion of the blank results is provided in the attached DQE narratives.

Representativeness

Representativeness refers to the degree sample data accurately and precisely describes the population of samples at a sampling point or under certain environmental conditions. Samples that are not properly preserved or are analyzed beyond holding times may not be considered representative. Review of sampling procedures, laboratory preparation, analysis holding times, trip blank and rinsate blank analysis help in providing this assessment.

Garden soil sampling event, August 2019: Sampling procedures followed the project QAPPs and were considered representative of the matrices collected. Laboratory preparation and analysis followed method guidelines.

Comparability

The selection of standardized methods and consistent laboratory practices facilitates the comparison of data between sampling events. Consistent methodology and standard analytical methods were used throughout the sampling events.

Garden soil sampling event, August 2019: This was the first event of its kind at the site, and data are not compared to any historic results.

Completeness

Completeness is determined for both field and analytical objectives. Field completeness is calculated from the number of samples proposed versus the actual number of samples collected. Analytical completeness is expressed in terms of usable data. The project completeness goal for DDMT is 90% as stated in the DDMT QAPP.

Garden soil sampling event, August 2019: Data from this event was 100% complete except for four SVOC analytes, which were rejected in one sample due to very low MS/MSD recoveries. For these four analytes, the completeness was 95%. Data from this event met the completeness DQO.

Sensitivity

Analytical sensitivity is the concentration at which the measurement system can quantitate target analytes in the environmental matrices of concern. Analytical sensitivity is expressed in terms of the RL or LOQ, which is provided by the respective laboratories as their reasonable and defensible quantitation limit for environmental samples above the MDL or DL, which is established by each laboratory using pure water or clean matrix.

Garden soil sampling event, August 2019: The analytical method LOQs were compared to USEPA residential soil screening levels (SSLs) and were below the standards for the contaminants of concern, except for N-nitrosodimethylamine and N-nitroso-di-n-propylamine. The DL for N-nitroso-di-n-propylamine was below the SSL, and the lab reported down to the DL.

The DL for N-nitroso-dimethylamine was above the SSL, so it cannot be determined with certainty that this analyte was not present at or above the SSL.

The following sections discuss only those deficiencies encountered during the evaluation that resulted in qualified and/or unusable data.

Garden Soil Sampling Event - August 2019

A total of 23 samples including 17 soil field samples and six QA/QC samples (duplicates, MS/MSD, trip blanks, rinsate blanks) were collected from 12 borings in August 2019. Samples were collected from two depths in each boring except boring 09C, which had only one sample collected. Samples were analyzed for VOCs, SVOC, PAHs, organochlorine pesticides, PCBs, metals, mercury, and hexavalent chromium. The data are usable with qualifications as described below:

VOCs

- Thirteen VOCs had matrix spike (MS) recoveries below the control limits but had MS duplicate (MSD) recoveries within the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1). The MS recoveries of 17 analytes were above control limits. Of these analytes, acetone was the only detection and was qualified as estimated (J) in the parent sample. The other analytes were not detected in the parent sample and were not qualified.

- Acetone in one parent sample / field duplicate pair had an RPD above the control limit and was qualified as estimated (J).

- The areas of one internal standard in two samples were below the required limit, and the associated analytes were qualified as non-detect estimated (UJ) or estimated (J).

SVOCs

- Benzyl alcohol in six samples was qualified as non-detect estimated (UJ) due to low recovery of the continuing calibration standard.
- Two analytes (3,3'-dichlorobenzidine and aniline) were qualified as non-detect estimated (UJ) in all soils due to low laboratory control sample (LCS) recoveries.
- All phenols and benzoic acid in five samples were qualified as non-detect estimated (UJ) due to low recoveries of two of the three acid fraction surrogates.
- Four analytes (2,4-dimethylphenol, 3,3'-dichlorobenzidine, aniline, and benzyl alcohol) had MS and MSD recoveries below 10%, and these non-detect results in the parent sample (GN-SO-04-1) have been rejected (R).
- Four analytes had MS and/or MSD recoveries below the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1).

- The MSD recovery of carbazole was above the control limits, and the RPD was above the control limit of 20%. Carbazole was detected in the parent sample and was qualified as estimated (J).
- Carbazole in one parent sample / field duplicate pair had an RPD above the control limit and was qualified as estimated (J).

PAHs

- Pyrene in the rinse blank was qualified as non-detect at the limit of quantitation (LOQ) due to pyrene detected in the associated method blank.

Pesticides

- Three pesticides had MS and/or MSD recoveries below the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1).

VOCs: VOCs were not detected in the method blanks. No qualification was required.

SVOCs: SVOCs were not detected in the method blanks. No qualification was required.

PAHs: Pyrene was detected at a trace level in the method blank associated with the rinse blank. Pyrene in the rinse blank was also detected at a trace level and was qualified as non-detect at the LOQ. PAHs were not detected in the method blanks associated with the soil samples.

Pesticides: Pesticides were not detected in the method blanks. No qualification was required.

PCBs: PCBs were not detected in the method blanks. No qualification was required.

Total Metals: Target analytes were detected, in the soil method blanks, for Aluminum and Copper. Samples results were either non-detect, or greater than the required percentage of the MB. No qualification was required.

Total Mercury: Target analytes were not detected in the method blanks. No qualification was required.

Hexavalent Chromium: The target analyte was detected in the method blank at a trace level and in most samples, also at trace levels. Normally for this project, the sample results would be qualified as non-detect at the LOQ of 0.6 mg/kg, but the residential SSL for hexavalent chromium is 0.3 mg/kg, so the non-detect at the LOQ would not provide the needed information. The sample results have been qualified as estimated (J).

RINSE BLANKS

VOCs: Ethylbenzene, o-xylene, m/p-xylene, acetone, chloromethane, styrene, toluene, and 2-butanone were detected at trace levels in the rinse blank. Most or all of these analytes were detected in the soil samples at trace levels or higher. Sample results were not qualified due to detections in the rinse blank.

SVOCs: SVOCs were not detected in the rinse blank. No qualification was required.

PAHs: Pyrene was detected at a trace level in the method blank associated with the rinse blank, therefore pyrene in the rinse blank was qualified as non-detect at the LOQ and samples were not qualified for pyrene. Naphthalene was detected in the rinse blank at a trace level. Most of the soil samples had detections of naphthalene, some trace levels and some higher levels. Sample results were not qualified due to naphthalene in the rinse blank.

XIII. LIMITS OF QUANTITATION (LOQs), LIMITS OF DETECTION (LODs), AND DETECTION LIMITS (DLs)
The LOQs should be at or below the project action limits (PALs). The PALs used for comparison are the USEPA Resident Soil Screening Levels.

VOCs: All LOQs were below the PALs.

SVOCs: All LOQs were below the PALs except for the analytes shown in the table below. The lab reported detections down to the DL. LOQs, LODs, and DL above the screening level are italicized and bolded.

Analyte	Residential Soil screening level (mg/kg)	LOQ (mg/kg)	LOD (mg/kg)	DL (mgkg)
N-Nitrosodimethylamine	0.002	***0.4***	***0.12***	***0.027***
N-Nitrosodi-n-propylamine	0.078	***0.4***	***0.12***	0.069

PAHs: The LOQs were below the PALs.

Pesticides: The LOQs were below the PALs.

PCBs: The LOQs were below the PALs.

Total Metals: The LOQs were below the PALs except for arsenic, which had LOQs very near the PAL. Arsenic was detected in all the soil samples at levels an order of magnitude greater than the PAL.

Total Mercury: The LOQs were below the PAL.

Hexavalent Chromium: The LOQs of 0.6 mg/kg and the LODs of 0.4 mg/kg were above the PAL of 0.30 mg/kg, but the DLs of 0.2 mg/kg were below the PAL, and the lab reported results down to the DL.

As noted in Section V. BLANKS, METHOD BLANKS, the target analyte was detected in the method blank at a trace level and in most samples, also at trace levels. Normally for this project, the sample results would be qualified as non-detect at the LOQ of 0.6 mg/kg, but the PAL for hexavalent chromium is 0.3 mg/kg, so the non-detect at the LOQ would not provide the needed information. The sample results have been qualified as estimated (J).

XIV. SAMPLE RESULTS / TRANSCRIPTION VERIFICATION

Transcription between the data package and the EDDs was verified. Non-detect sample results were reported to the LOD, but detections below the LOD were reported. Sample results detected between the DL and LOQ were qualified as estimated (J).

VOCs: A trace amount of 2,2-dichloropropane was reported in samples GN-SO-08-2 and GN-SO-03-1. This analyte was identified in most of the other samples but the lab noted a poor mass spectrum match and did not report detections. The results in these two samples had similar detections and mass spectra, and the results have been changed to non-detect as in the other samples.

SVOCs: Results for the 18 PAHs were reported from the 8270D-SIM analysis.

PAHs: No issues.

Pesticides: Some detected results had RPDs greater than the required limit of less than 40% between the primary (reported) results and the secondary (confirmation) results and were qualified as shown in the table below.

Sample	Analyte	Primary / Confirmation Results	RPD	Qualification
GN-SO-01-1	gamma-Chlordane	2.61 / 0.835 µg/kg	103%	J
