QC	quality control
ROD	record of decision
RSL	regional screening level
SCROD	Shelby County Register of Deeds
SVOC	semi-volatile organic compound
TCE	trichloroethene
TDEC	Tennessee Department of Environment and Conservation
TIC	tentatively identified compound
USACE	United States Army Corps of Engineers
USEPA	United States Environmental Protection Agency
VOC	volatile organic compound

1 Introduction

This *Final Garden Soil Sampling Report* (Report) was prepared by HDR, Inc. under Contract Number W91278-16-D-0061-W9127819F0090 to the United States Army Corps of Engineers (USACE). This Report documents garden soil sampling and analytical results for an area on the Main Installation (MI) of the former Defense Depot Memphis, Tennessee (DDMT). The area was temporarily used for a garden by the current owner, Barnhart Crane & Rigging Company (Barnhart). Soil sampling was conducted to evaluate whether the soil may contain contaminants resulting from past Army activities that could present a risk to human health. Soil sampling was conducted in accordance with the Statement of Work (USACE 2019) and the *Final Garden Soil Sampling Work Plan* (Work Plan) (HDR 2019a).

1.1 Location and Site History

DDMT is located in southeastern Memphis, Tennessee, and consists of approximately 634 acres at the MI and Dunn Field. The MI contains approximately 567 acres with open storage areas, warehouses, former military family housing, and outdoor recreational areas. Dunn Field, which is located across Dunn Avenue from the northwest section of the MI, contains approximately 67 acres with former mineral storage and waste disposal areas.

DDMT originated as a military facility in the early 1940s to provide stock control, material storage, and maintenance services for the United States (U.S.) Army. DDMT was selected for closure under Base Realignment and Closure (BRAC) in 1995; storage and distribution activities ceased in September 1997.

During operations from 1942 to 1997, DDMT received, warehoused, and distributed supplies to U.S. military services and civilian agencies. The supplies included hazardous substances; textile products; food products; electronic equipment; construction materials; and industrial, medical, and general supplies.

1.2 Geology and Hydrogeology

The geologic units of interest at DDMT are (from youngest to oldest): loess, including surface soil; fluvial deposits; Jackson Formation/Upper Claiborne Group (Jackson/Upper Claiborne); and Memphis Sand.

Sampling was limited to the loess and fill placed since the property was purchased by the federal government. The loess consists of wind-blown and deposited brown to reddish-brown, low-plasticity clayey silt to silty clay. The loess deposits are about 20 to 30 feet (ft) thick and are continuous throughout the DDMT.

1.3 Contaminants and Remedial Action

Site investigations from 1989 to 2001 identified contamination in surface soil and ground water (CH2MHILL 2000). Surface soil contamination consisted primarily of metals, pentachlorophenol, polychlorinated biphenyls, polyaromatic hydrocarbons, and a pesticide, dieldrin. Groundwater

contamination was limited to chlorinated volatile organic compounds (CVOCs) primarily tetrachloroethene (PCE), trichloroethene (TCE), carbon tetrachloride, and chloroform.

The remedial action objectives established in the Main Installation Record of Decision (MI ROD) (CH2MHILL 2001) were to prevent contact/ingestion of surface soil contaminated with lead, dieldrin and/or arsenic above risk based criteria, to prevent ingestion of water contaminated with volatile organic compounds (VOCs) in excess of maximum contaminant levels (MCLs), to reduce concentrations of VOCs in groundwater to MCLs or lower, and to prevent horizontal and vertical off-site migration of groundwater contaminants in excess of MCLs. The selected remedy consisted of excavation and offsite disposal of lead-contaminated surface soil near Building 949, deed restrictions and land use controls for the MI, enhanced bioremediation treatment of CVOCs in groundwater, long-term groundwater monitoring and five-year reviews of the selected remedy.

The garden area is located along the property boundary in the northwest quadrant of the MI (see Figure 1); it is within Operating Unit (OU) 4, North Central Area MI and Functional Unit (FU) 4, Northern and Open Area. Figures 3 and 8 from the *2019 Site Management Plan* (HDR 2019b) show no removal actions or environmental sites located in close proximity to the garden area. The figures were included in Appendix A of the Work Plan.

1.4 Recent Activity

In 2017, Barnhart partnered with Landmark Training and Development Company to start a job skills/ employability program for young adult and working age youth. A Barnhart representative stated the program's goal is to improve the participants' employment opportunities and that the program conforms to labor practices and guidelines allowed by the U.S. Department of Labor and the Tennessee Department of Labor and Workforce Development. The program participants are temporary employees of and paid by Landmark using grant funding. The participants, aged 13 to 17, worked under supervision in and around Barnhart property at the MI for 4 hours per day, up to 5 days per week for up to 10 weeks from late May to early August.

One of the program activities was work in the garden area where an assortment of vegetables were planted in above-grade concrete containers; the containers held a commercial soil mix purchased from Lowe's Home Improvement store. Roses and sunflowers were planted in the ground near the containers. Cabbage was also planted in the ground. Potable water from Memphis Light, Gas & Water was used to water the garden. Barnhart discontinued activities in the community garden area in June 2018. None of the vegetables were harvested; they were removed in May 2018 and discarded. The garden area is shown on Figure 1.

Land use restrictions at the MI were established in accordance with the MI ROD through the *Land Use Control Implementation Plan* (LUCIP) in Appendix C of *Main Installation Final Remedial Design, Revision 1* (CH2MHILL 2004). The restrictions are summarized as follows:

- No residential land use or other child-occupied facilities, including daycare, on the MI (except Parcels 1 and 2 of FU6).
- No production/consumptive use of groundwater or drilling groundwater wells on the MI.

- Notice of Land Use Restrictions (NLUR) filed with Shelby County Register of Deeds (SCROD). Leases and deeds for MI property must include the Land Use Controls (LUC) and Environmental Protection Provisions (EPP).

An annual site inspection is conducted to verify that the restrictions are being maintained and that the restrictions remain effective. The 2019 site inspection report (HDR 2019c) noted that Barnhart stated they did not participate in the Landmark program in 2019 and the garden program has been inactive since June 2018. U.S. Environmental Protection Agency (USEPA) has stated the garden activities are consistent with residential use and thus are not allowed on the MI, unless the LUCIP is revised by Army and approved by USEPA and Tennessee Department of Environment and Conservation (TDEC).

2 Sampling and Analysis Methods

2.1 Garden Access and Utility Clearance

HDR contacted the Barnhart site manager approximately one week before mobilization to review the planned activities and arrange site access. The sampling activities were discussed with Barnhart personnel and access was granted.

The planned soil sampling locations were marked by HDR on 20 August 2019 and Tennessee 811 was notified (Ticket No. 192325463). Underground utilities were marked before sampling was performed.

2.2 Soil Sampling

The garden area is approximately 0.6 acre with dimensions of approximately 120 ft by 210 ft. The area was divided into eight sample cells ranging from approximately 2170 to 3050 square feet using a tape measure and wooden stakes. Each cell was visually inspected to select a representative sample location. The sample locations for the garden included ‘disturbed’ areas that were used for planting (01, 02, 03 and 04), a ‘disturbed’ area that appeared to be a soil stockpile (08), and ‘undisturbed’ areas (05, 06 and 07) where planting was limited to containers. The sample locations were measured from the southwest corner of the chain link fence that surrounds the garden area; the sample grid and coordinates are listed on Table 1. Sample locations are depicted on Figure 2 and photographs of the locations are provided in Appendix A.

Soil samples were collected on 26 August 2019. A clean stainless-steel hand auger was used to collect two soil samples from each of the eight grids (Figure 2). The shallow soil samples were collected by advancing a cleaned stainless steel hand auger from ground surface to approximately 6 inches below ground surface (bgs). A soil sample for VOC analysis was immediately collected from the hand auger barrel using Terracore samplers. The remaining soil from the hand auger was placed into a clean stainless steel bowl, rocks and debris were removed, and the soil was homogenized with a new nitrile-gloved hand until thoroughly mixed. Samples were collected from the stainless steel bowl and placed in laboratory supplied containers.

The hand auger was advanced to 12 inches bgs and the excavated soil was placed adjacent to the boring. After reaching 12 inches bgs, the hand auger was removed from the boring and decontaminated by scrubbing with an Alconox solution, rinsing with potable water, and drying with new paper towels.

The cleaned hand auger was then advanced from approximately 12 to 18 inches bgs. A deep soil sample for VOC analysis was immediately collected from the hand auger barrel using Terracore samplers. The remaining soil from the hand auger was placed into a clean stainless steel bowl, rocks and debris were removed, and the soil was homogenized with a new nitrile gloved hand until thoroughly mixed. Samples were collected from the stainless steel bowl and placed in laboratory supplied containers for non-volatile analyses.

One soil sample (S09) was also collected from a planter box located immediately south of the garden area. The sample was collected from 6 to 12 inches below grade using a cleaned hand auger and stainless steel bowl, consistent with the methods presented above.

The soil samples consisted of light brown, sandy silt fill soil. Most samples were weakly cemented with fine rounded gravel or subangular, medium-sized gravel.

Samples collected from 0 to 6 inches bgs are identified by “1” as the final number in the sample identification and samples collected from 12 to 18 inches bgs are identified by “2” (e.g., GN-SO-02-1 and GN-SO-02-2). Two duplicate soil samples GN-SO-DUP 1 and GN-SO-DUP 2 were collected from parent samples GN-SO-02-1 and GN-S0-05-2, respectively.

After the samples were collected, each boring was backfilled with the excavated soil and lightly compacted.

2.3 Laboratory Analysis

The soil samples were submitted to DOD-ELAP certified laboratories, CT Laboratories and APPL Labs, for analysis as listed below.

- CT Laboratories
    - VOCs by SW-846 Method 8260C.
    - Semi-volatile organic compounds (SVOCs) including pentachlorophenol by SW-846 Method 8270D.
    - Polycyclic aromatic hydrocarbons (PAHs) by SW-846 Method 8270D-SIM.
    - Organochlorine pesticides by SW-846 Method 8081B and polychlorinated biphenyls (PCBs) by SW-846 Method 8082A.
    - Total metals by SW-846 Methods 6010C, 6020 and 7471B series.
- APPL Labs
    - Hexavalent chromium (Cr6) by SW-846 Method 7199.

3 Results

3.1 Data Quality Evaluation

Analytical data from the August 2019 garden soil sampling event were reviewed by the HDR Project Chemist using guidelines in the Work Plan and the *DDMT Uniform Federal Policy-Quality Assurance Project Plan, Revision 1* (HDR 2018). The complete analytical results for field samples, including data quality evaluation (DQE) flags, are presented for each analyte group in Appendix B, Tables B-1, B-2, B-3, B-4, and B-5. Tentatively identified compounds (TICs) for VOCs and SVOCs are presented in Appendix B, Tables B-6 and B-7, respectively. Results for quality control (QC) samples are presented in Table B-8.

The laboratory analytical reports are included in Appendix C (electronic copies only). The complete DQE for the sample results is provided in Appendix D. The main findings from the DQE for the analytical data are summarized below.

Four SVOC analytes (2,4-dimethylphenol, 3,3'-dichlorobenzidine, aniline, and benzyl alcohol) in one soil sample (GN-SO-04-1) were rejected due to very low matrix spike / matrix spike duplicate (MS/MSD) recoveries. The remaining laboratory data met project data quality objectives (DQOs) with minor qualification and were determined to be sufficient to support the project objectives. The main findings from the DQE for the Garden Soil analytical data are summarized below.

3.1.1 VOCs

- Thirteen VOCs had MS recoveries below the control limits but had MSD recoveries within the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1). The MS recoveries of 17 analytes were above control limits. Of these analytes, acetone was the only detection and was qualified as estimated (J) in the parent sample. The other analytes were not detected in the parent sample and were not qualified.
- Acetone in one parent sample / field duplicate pair had an RPD above the control limit and was qualified as estimated (J).
- The areas of one internal standard in two samples were below the required limit, and the associated analytes were qualified as non-detect estimated (UJ) or estimated (J).

3.1.2 SVOCs

- Benzyl alcohol in six samples was qualified as non-detect estimated (UJ) due to low recovery of the continuing calibration standard.
- Two analytes (3,3'-dichlorobenzidine and aniline) were qualified as non-detect estimated (UJ) in all soils due to low laboratory control sample (LCS) recoveries.
- All phenols and benzoic acid in five samples were qualified as non-detect estimated (UJ) due to low recoveries of two of the three acid fraction surrogates.

- Four analytes (2,4-dimethylphenol, 3,3'-dichlorobenzidine, aniline, and benzyl alcohol) had MS and MSD recoveries below 10%, and these non-detect results in the parent sample (GN-SO-04-1) have been rejected (R).
- Four analytes had MS and/or MSD recoveries below the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1).
- The MSD recovery of carbazole was above the control limits, and the RPD was above the control limit of 20%. Carbazole was detected in the parent sample and was qualified as estimated (J).
- Carbazole in one parent sample / field duplicate pair had an RPD above the control limit and was qualified as estimated (J).

3.1.3 PAHs

- Pyrene in the rinse blank was qualified as non-detect at the limit of quantitation (LOQ) due to pyrene detected in the associated method blank.
- All 18 PAHs in sample GN-SO-DUP-2 were detected and qualified as estimated with a possible high bias (J+) due to one surrogate recovery above control limits and the other surrogate recovery just within the upper control limit.
- Five PAHs had MS or MSD recoveries above or below the control limits and RPDs above the control limit. These analytes were qualified as estimated (J) in the parent sample (GN-SO-04-1).
- All 18 PAHs in one parent sample / field duplicate pair and 13 PAHs in the other parent sample / field duplicate pair had RPDs above the control limit and were qualified as estimated (J).

3.1.4 Pesticides

- Three pesticides had MS and/or MSD recoveries below the control limits. These analytes were qualified as non-detect estimated (UJ) in the parent sample (GN-SO-04-1).
- The MSD recovery of 4,4'-DDE was below the control limits. 4,4'-DDE was detected in the parent sample and was qualified as estimated (J).
- Three pesticides in one parent sample / field duplicate pair had RPDs above the control limit and were qualified as estimated (J). Two pesticides in these samples were not detected in the field duplicate but were detected in the parent sample, and these results were qualified as non-detect estimated (UJ) and estimated (J) respectively.
- Some detected results had RPDs between the primary (reported) results and the secondary (confirmation) results that were greater than the required limit and were qualified as estimated (J).

3.1.5 Metals

- The MSD recovery of arsenic was below the control limits. Arsenic was qualified as estimated (J) in the parent sample (GN-SO-04-1).

- The MS and MSD recoveries of lead were above the control limits. Lead was detected in the parent sample and was qualified as estimated (J).
- Fifteen metals in one parent sample / field duplicate pair and two metals in the other parent sample / field duplicate pair had RPDs above the control limit and were qualified as estimated (J).

3.1.6 Hexavalent Chromium

- Hexavalent chromium was detected in the method blank at a trace level and in most samples, also at trace levels. Normally for this project, the sample results would be qualified as non-detect at the LOQ of 0.6 mg/kg, but the residential soil screening level (SSL) for hexavalent chromium is 0.3 mg/kg, so the non-detect at the LOQ would not provide the needed information. The sample results have been qualified as estimated (J).

3.1.7 All Analyses

- Any result reported below the LOQ but above the detection limit was flagged “J” and considered an estimated result (unless overridden by other quality control [QC] flags).

3.2 Sample Results

Soil samples were collected at nine locations as described in Section 2.2. The complete analytical results for the garden soil samples are listed in Tables B-1 to B-7. The USEPA regional screening levels (RSLs) (USEPA 2019) for industrial and residential exposure with a target cancer risk of 1E-06 and target hazard quotient of 1 are also shown on the tables.

The analytical results are summarized in the following sections for each analyte group; summary tables are provided listing analytes detected above the LOQ in at least one sample or where analyte concentrations exceeded a USEPA RSL; VOCs are shown on Table 2, PAHs on Table 3, Pesticides /PCBs on Table 4 and Metals on Table 5. The RSLs are also listed on the tables.

RSLs are not available for the TICs reported on Tables B-6 and B-7, and TICs are not typically evaluated in risk assessments unless they are known to be site-related. Since none of the TICs are considered to be site-related, they are not discussed in the following sections.

3.2.1 VOCs

The complete results for VOCs are shown on Table B-1. There were no exceedances of RSLs for VOCs. The four VOC analytes detected above the LOQ in at least one samples are shown on Table 2.

3.2.2 SVOCs

The complete results for SVOCs are shown on Table B-2. A summary table is not provided for SVOCs because there were no exceedances of RSLs and no SVOCs were detected above the LOQs.

3.2.3 PAHs

The complete results for PAHs are shown on Table B-3. Four PAHs exceeded RSLs for residential exposure: Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene and Dibenzo(a,h)anthracene. There were no exceedances for industrial exposure. All the PAH analytes were detected above the LOQs and are shown on Table 3.

3.2.4 Pesticides and PCBs

The complete results for pesticides and PCBs are shown on Table B-4. There was one exceedance of a pesticide RSL for residential exposure; 4,4-DDE at 2,440 µg/kg in the duplicate for sample GN-SO-02-1, exceeded the RSL of 2,000 µg/kg. The concentration of 4,4-DDE in the parent sample (82.8 µg/kg) is well below the RSL. There were no other exceedances of RSLs for pesticides and PCBs. PCBs were not detected above the LOQ in any samples. The five pesticides detected above the LOQ are shown on Table 4.

3.2.5 Metals

The complete results for metals are shown on Table B-5. Arsenic was reported in all samples at concentration of 3,340 to 16,900 µg/kg; the concentrations exceed both the residential and industrial RSLs, of 680 and 3,000 µg/kg, respectively. Only the highest reported concentration for arsenic, 16,900 µg/kg at GN-SO-04-1, exceeds the reported background concentration for arsenic at DDMT, 16,500 µg/Kg (CH2MHILL 1998).

Hexavalent chromium concentrations of 320 to 620 µg/kg in seven samples exceed the residential RSL (300 µg/kg). All the metal analytes, except silver, were detected above the LOQs and are shown on Table 5.

4 Conclusions

Residential RSLs were exceeded for four PAHs (Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene and Dibenzo(a,h)anthracene), one pesticide (4,4-DDE) and for two metals (arsenic and hexavalent chromium).

Arsenic was the only analyte to exceed an industrial RSL. However, all but one of the sample concentrations were below the arsenic background concentration (16,500 µg/kg) established for DDMT in 1998.

Notes:

The USEPA Regional Screening Levels (RSLs) with a target cancer risk of 1E-06 and target hazard quotient of 1 (May 2019) are applied as screening criteria.

The USEPA RSLs for 1,3-dichloropropene are applied for its cis- and trans-isomers and m-xylenes for m,p-xylenes.

Concentrations greater than the Residential RSL are shaded bold.

Concentrations greater than the Industrial RSL are shaded bold and underlined.

µg/Kg: micrograms per Kilogram

DQE Flags:

J: Estimated

U: Not Detected

UJ: Not Detected, estimated

Method:

8260C: Volatile Organic Compounds (VOCs)

Notes:

The USEPA Regional Screening Levels (RSLs) with a target cancer risk of 1E-06 and target hazard quotient of 1 (May 2019) are applied as screening criteria.

The USEPA RSLs for 1,3-dichloropropene are applied for its cis- and trans-isomers and m-xylenes for m,p-xylenes.

Concentrations greater than the Residential RSL are shaded bold.

Concentrations greater than the Industrial RSL are shaded bold and underlined.

µg/Kg: micrograms per Kilogram

DQE Flags:

J: Estimated

U: Not Detected

UJ: Not Detected, estimated

Method:

8260C: Volatile Organic Compounds (VOCs)

Notes:

The USEPA Regional Screening Levels (RSLs) with a target cancer risk of 1E-06 and target hazard quotient of 1 (May 2019) are applied as screening criteria.

The USEPA RSLs for 1,3-dichloropropene are applied for its cis- and trans-isomers and m-xylenes for m,p-xylenes.

Concentrations greater than the Residential RSL are shaded bold.

Concentrations greater than the Industrial RSL are shaded bold and underlined.

µg/Kg: micrograms per Kilogram

DQE Flags:

J: Estimated

U: Not Detected

UJ: Not Detected, estimated

Method:

Notes:
The USEPA Regional Screening Levels (RSLs) with a target cancer risk of 1E-06 and target hazard quotient of 1 (May 2019) are applied as screening criteria.
The RSLs for endosulfan are applied to endosulfan I and II, endrin to endrin aldehyde and endrin ketone, and chlordane to alpha and gamma chlordane.
Concentrations greater than the Residential RSL are shaded bold.
Concentrations greater than the Industrial RSL are shaded bold and

ANALYTICAL RESULTS FOR:

LYNN LUTZ
HDR
9563 S. KINGSTON COURT
ENGLEWOOD, CO 80112

PROJECT SITE:	Memphis Depot, FU4 Garden, Memphis, TN
WORK ORDER/CONTRACT #:	W91278-16-D-0061(0003)
PROJECT #:	
SDG:	147664 (147687)
PREPARED:	September 19, 2019
DOCUMENT PAGES:	4874

The data contained in the following report have been reviewed by the appropriate CT Laboratories' LLC staff members. In addition, CT Laboratories LLC certifies that to the best of our knowledge that the analyses reported herein are true, complete and correct within the limits of the methods employed and that they follow the applicable requirements as specified by the project plan, state-specific, NELAC or DOD QSM requirements. The estimated uncertainty of measurement is only available upon request. The reported results relate only to the tested samples. This report shall not be reproduced, except in full, without written approval of CT Laboratories LLC.

Case Narrative

Client: HDR, Englewood, CO
Project: Memphis Depot, FU4 Garden, Memphis, TN
Sample Receipt Date(s): 08-28 and 08-29-2019
SDG #: 147664 (folders 147664 and 147687)

Nineteen solid samples and two aqueous rinse blanks were analyzed for a variety of parameters, including: metals, pesticides, PCBs, PAHs, SVOCs and VOC's. A trip blank was also included with the VOC analyses. Select metals (i.e., Sb, As, Pb, Se, Ag) were analyzed by ICP/MS. The ICP/MS metals analyses were sub-contracted to Microbac Laboratories, Marietta, OH. The assigned sample ID numbers, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. Any exceptions are noted below. The analyses were performed following DOD QSM 5.1

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, Reason #(s) were included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

Sample Analysis and Quality Control

Volatile Analysis:

The samples were analyzed using US EPA Method 8260C (VOCs). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8260 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1's were either not detected or did not meet identification criteria so they were reported as non-detects.

Compounds that may not meet the recommended minimum average response factor (ARF) criteria for 8260C (such as several of the ketones) are analyzed at concentrations 2 to 50 times higher than normal to

make up for their lack of response. However, the ARF on the response factor (RF) forms do not reflect this change in concentration. These compounds may be "flagged" on RF forms as a result.

CCV compounds are calibrated using either response factor (with acceptance criteria <20%deviation, or <50% deviation for CCVF) or quadratic regression (with acceptance criteria <20% drift, or <50% drift for CCVF). Non-conformances were qualified with a "Z" flag unless otherwise noted.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target compounds within the calibration range of the instrument.

VOC (8260C) Low-level Aqueous Analyses

Analytical Run # 163976/164066

Chloromethane and carbon disulfide were present in the Initial Calibration Blank (ICB) for calibration curve LW082519.

CCV1 had a low recovery outside specified criteria for bromomethane.

The Laboratory Control Sample Duplicate (LCSD) had high recoveries for n-butylbenzene, s-butylbenzene, and vinyl acetate. The result for these compounds in the associated samples was qualified with a "Q" flag. The Laboratory Control Sample (LCS)/LCSD also had Relative Percent Difference (RPD) failures for bromomethane and vinyl acetate. The result for these compounds in the associated samples was qualified with a "Y" flag.

VOC (8260C) Low-level Solid Analyses

Analytical Run # 163979/163980

Sample #'s 321163 & 321166 were reported with a low Internal Standard (ISTD) response for 1,4-dichlorobenzened4. The second vial provided did not contain any liquid and these samples could not be reanalyzed. The compounds affected by this low ISTD were qualified with an "S" flag.

Sample #'s 321149, 321163, 321166 & 321170 were reported with a high surrogate standard (SSTD) recovery for 4-bromofluorobenzene (BFB). This SSTD was qualified with an "S" flag.

The Matrix Spike (MS) and the Matrix Spike Duplicate (MSD) for sample # 321161 contained a number of compounds with recovery failures (high and low). The parent sample result for these compounds was qualified with an "M" flag. The MS/MSD also had a number of Relative Percent Difference (RPD) failures. The parent sample result for these compounds was qualified with a "Y" flag.

Semi-Volatile Organic Analysis:

The samples were analyzed using US EPA Method 8270D in SIM (PAHs) and standard (SVOCs) modes. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log Prep Log

All analyses met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8270 data for all detected compounds, as well as, for those compounds manually integrated (if applicable).

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target compounds within the calibration range of the instrument.

PAHs (8270D-SIM) Solid Analyses

Analytical Run # 164274

The MS analyzed on sample 321161 had a high recovery of 1 analyte and low recoveries of 3 analytes. The MSD had a high recovery of one analyte and low recoveries of 2 analytes. Analytes with recoveries outside the QC limits were qualified with “M” in the parent sample. RPDs between the MS and MSD were high for 3 analytes. These analytes were qualified with “Y” in the parent sample.

Sample 321165 had a high recovery of surrogate standard fluotanthene-d10. This surrogate was qualified with “S”.

PAHs (8270D-SIM) Aqueous Analyses

Analytical Run # 164170

Pyridine was detected in method blank 321835 at a concentration less than ½ the reporting limit. This analyte was qualified with “B” in the associated sample.

SVOCs (8270D) Solid Analyses

Analytical Run # 164275

Ending CCV 1CCV611 had low responses for 4 analytes: benzyl alcohol, benzidine, 3,3’-dichlorobenzidine, and benzo(g,h,i)perylene. These analytes were qualified with “Z” in the associated samples.

LCS 321439 had low recoveries of aniline and 3,3’-dichlorobenzidine and high recoveries of 2,4-dinitrophenol and pyridine. These analytes were qualified with “Q” in the associated samples.

The MS and MSD analyzed on sample 321161 had low recoveries for multiple analytes and high recoveries for multiple analytes. Analytes with recoveries outside the QC limits were qualified with “M”

in the parent sample. RPDs between the MS and MSD were high for 22 analytes. These analytes were qualified with “Y” in the parent sample.

Samples 321162, 321164, 321166, 321167, 321168, and 321169 had low recoveries for one or more surrogate standards. Surrogates with low recoveries were qualified with “S”.

SVOCs (8270D) Aqueous Analyses

Analytical Run # 164171

All analytical results met the method/project specified quality control criteria.

Pesticide Analysis:

The samples were analyzed using US EPA Method 8081B. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log

All analysis results met the method specified quality control criteria with the following exceptions:

Pesticides (8081B) Solid Analyses

Analytical Run #’s 164272

The MS and MSD had failures for low recovery of multiple analytes. The failing analytes were 4,4-DDE, Endosulfan sulfate, Endrin keytone and Gamma chlordane. The MS and MSD were reported and failing analytes were qualified with an "M" flag in the parent sample #321161.

All surrogates passed on channel A and were reported. Sample #s 321157 and 321171 had a large peak co-elute with DCB on channel B causing the detection to be high. The results were reported from channel A and no qualifiers were used.

Pesticides (8081B) Aqueous Analyses

Analytical Run # 164709

All analysis results for this SDG met the method/project specified quality control criteria.

PCB Analysis:

The samples were analyzed using US EPA Method 8082A. All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log

All analysis results met the method specified quality control criteria with the following exceptions:

PCB (8082A) Solid Analyses

Analytical Run #'s 164273

Single point failures occurred on channel B in the ending CCV for 1016 on 09/13/2019. The totals on both channels for all CCVs were within program limits and the data was not qualified.

PCB (8082A) Water Analyses

Analytical Run # 164078

All analysis results for this SDG met the method/project specified quality control criteria.

Metals Analysis:

The samples were analyzed using US EPA Methods 6010C (ICP) and 7470A/7471B (Hg) and Standard Methods 2340B (hardness). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

Continuing Calibration Verifications standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target analytes within the calibration range of the instrument.

ICP Metals (6010C) Solid Analyses

Analytical Run # 164036

Calcium was detected in the Continuing Calibration Blank (CCB) standard greater than the Method Detection Limit (MDL). The affected samples were reported and qualified with a "B" flag and not reanalyzed because the CCB result was less than $1/10^{th}$ of the sample results.

Aluminum and copper were detected in the Method Blank (MB) greater than the MDL but less than ½ the Reporting Limit (RL). The samples were reported and not qualified because the MB results were less than $1/10^{th}$ of the sample results.

The Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) for sample # 321161 had failing recoveries for aluminum, cobalt, iron, manganese, and zinc. A Serial Dilution (L) was analyzed and was not applicable for cobalt because the parent sample raw result was less than 50 times the Limit of Quantitation (LOQ). The L was not acceptable for aluminum, iron, and manganese because the results exceeded the Relative Percent Difference (RPD) limit. A Post Digestion Spike (PDS) was analyzed and was not acceptable for aluminum, iron, and manganese. The parent sample was reported and qualified with an "M" flag for the failing elements. The parent sample was reported and not qualified for zinc because the L was acceptable.

The Duplicate (DUP) for sample # 321161 was not applicable for beryllium and cadmium because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Analytical Run # 164035

The DUP for sample # 321161 was not applicable for sodium because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

ICP Metals (6010C) Aqueous Analyses

Analytical Run # 164046

The DUP for sample # 321513 was not applicable because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

Analytical Run # 164047

The DUP for sample # 321513 was not applicable for sodium and potassium because the parent sample results were less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7471B) Solid Analyses

Analytical Run # 164151

The CCV standard had outside recoveries for mercury because the CCV was not spiked. The CCV was reanalyzed twice and were acceptable.

The software stopped running while analyzing the CCV standard at 11:16 & 11:24 which produced no signal. The software was restarted and CCV was reanalyzed and was acceptable.

The DUP for sample # 321161 was not applicable for mercury because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CVAA Mercury (7470A) Aqueous Analyses

Analytical Run # 164096

The DUP for sample # 321513 was not applicable for mercury because the parent sample result was less than five times the LOQ. An MSD was analyzed to demonstrate precision and was acceptable. The parent sample was reported and not qualified.

CT LABORATORIES

delivering more than data from your environmental analyses

Data Qualifiers

Code	Description
A	Analyte averaged calibration criteria within acceptable limits.
B	Analyte detected in associated Method Blank.
C	Toxicity present in BOD sample.
D	Diluted Out.
E	Safe, No Total Coliform detected.
F	Unsafe, Total Coliform detected, no E. Coli detected.
G	Unsafe, Total Coliform detected and E. Coli detected.
H	Holding time exceeded.
J	Estimated value.
L	Significant peaks were detected outside the chromatographic window.
M	Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits.
N	Insufficient BOD oxygen depletion.
O	Complete BOD oxygen depletion.
P	Concentration of analyte differs more than 40% between primary and confirmation analysis.
Q	Laboratory Control Sample outside acceptance limits.
R	See Narrative at end of report.
S	Surrogate standard recovery outside acceptance limits due to apparent matrix effects.
T	Sample received with improper preservation or temperature.
U	Analyte concentration was not above the detection level.
V	Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference.
W	Sample amount received was below program minimum.
X	Analyte exceeded calibration range.
Y	Replicate/Duplicate precision outside acceptance limits.
Z	Calibration criteria exceeded.

CT LABORATORIES

delivering more than data from your environmental analyses

MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

#1: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

#2: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

#3: Improperly Integrated Isomers and/or coeluting compounds.
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

#4: System Established Incorrect Baseline.
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

#5: Miscellaneous.
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.

FVO4-01 Data Review Checklist

FORM #: FVO4-01
Rev. #: 2.1
Effective Date: 07/16/18

INDEPENDENT DATA REVIEW CHECKLIST			Method: GCMS (EPA SW-846 8260C)					
Analysis Date	**LIMS Run #(s):**	**Analyst/Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved?**			**Instrument**
					Yes	No		
09/05/2019	163979 163980	DGS/RLD	RLD	09/11/2019	Yes			VMS4

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	
I. BFB Tune Check						
Was a BFB tune check analyzed with acceptable results?	Relative abundance criteria met?	Yes		Yes		
II. Initial Calibration Verification (ICV)						
Was initial calibration performed using a minimum of five standard concentration levels (minimum of 6 levels for quadratic curves)?	Lowest standard at or below RL?	Yes		Yes		
Were the Average Relative Response Factors (ARRF) acceptable?	ARRF<or= specified limits (<15%D.)see SOP)	Yes		Yes		
Was a second-source ICV(s) analyzed (for Quadratic Curve)?	Required before sample analyses.	Yes		Yes		
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific	Yes		Yes		
Was Initial Calibration Blank (ICB) analyzed?	Required before sample analyses.	Yes		Yes		
Were the ICB results for all target analytes less than the limit of detection (LOD).	<LOD or < project/program specific limits		No		No	
III. Continuing Calibration Verification (CCV)						
Was an acceptable BFB tune check run at the beginning of every twelve hour shift?	Relative abundance criteria met?	Yes		Yes		
Was a CCV analyzed after every 12 hour tune check?	Required before sample analyses.	Yes		Yes		
Was a second CCV (CCV2) for compounds calibrated using quadratic curves analyzed after every 12 hour tune check?	Required before analyses of WI samples (above the inflection point of the curve).					
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific	Yes		Yes		
If necessary, were the results for outlying compounds qualified?						

IV. Blanks						
Was a Method Blank (MB) analyzed prior to analysis of samples?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MB results for all target analytes less than the limit of detection (LOD)?	*All target analytes <LOD or < project/program specific limits (<1/2 RL for DoD-QSM)	Yes		Yes		
If analytes were detected in the MB with no associated positives in the samples, no further action is needed. If the analyte detects in the MB were greater than the acceptance criteria and there were detects in the samples, was the data qualified.?						
V. Laboratory Control Spike (LCS)						
Was a LCS (and LCSD if needed) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the LCS (LCSD) recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.	Yes		Yes		
If applicable, were associated sample detects (and non-detects for low recoveries) qualified?						
Is the relative percent difference (RPD) for each analyte between the LCS and LSCD (if applicable) acceptable?	Default 20%, or see internally generated limits, or client specific limits.					
VI. Matrix Spike/Matrix Spike Duplicate (MS/MSD)						
Was a Martrix Spike (MS) and a Matrix Spike Duplicate (MSD) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MS/MSD recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.		No		No	
Is the relative percent difference (RPD) for each analyte between the MS and MSD acceptable?	Default 20%, or see internally generated limits, or client specific limits.		No		No	
VII. Sample Analyses						
Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		
Were surrogate recoveries for all samples and QC within acceptance criteria?	Default 70-130%, or see internally generated program limits, or client specified limits.		No		No	
If possible, were the affected samples reanalyzed?			No		No	
**Were reported sample results with failing surrogate recoveries qualified?		Yes		Yes		
Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed? If not qualify (X).	Target upper middle range of calibration curve.	Yes		Yes		
Did all samples meet hold time and preservation criteria as defined by method/program?	H2O sample: pH < 2 = 14 days, pH >2 = 7 days. Soil samples: 14 days (other criteria may apply)	Yes		Yes		
Were all samples and QC injected within 12 hours of BFB tune check?		Yes		Yes		
Were internal standard recoveries acceptable relevant to associated ICAL?	Response = -50 to +200%; Ret. time = +/- 30 sec.		No		No	

VIII. Records and Reporting						
Is sequence file / injection log present in the data package?		Yes		Yes		
Were all data, calculations, and values verified in LIMS (including removal of non-detections) upon completion of data capture?		Yes		Yes		
Were manual integrations performed correctly?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms.	Yes		Yes		
Was the rational for the manual integration verified?		Yes		Yes		
Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		

ᵏNon-Applicable Yes/No Cells Are Left Blank*

FVO4-01 Data Review Checklist

INDEPENDENT DATA REVIEW CHECKLIST			Method: GCMS (EPA SW-846 8260C)					
Analysis Date	**LIMS Run #(s):**	**Analyst/Data Interpreter**	**Independent Reviewer**	**Date of Review**	**Approved?**			**Instrument**
					Yes	No		
09/06/2019	164177 164176 164175 164174 164066 163976	DGS/RLD	RLD	09/18/2019	Yes			VMS4

Instructions: Complete one checklist per *analytical sequence* . Enter the appropriate response for each question. Each "No" response requires an explanation in the Comments section and may require the initiation of a Nonconformance Report.

Requirement	Acceptance Criteria	Analyst Review		Independent Review		Comments
		Yes	No	Yes	No	
I. BFB Tune Check						
Was a BFB tune check analyzed with acceptable results?	Relative abundance criteria met?	Yes		Yes		
II. Initial Calibration Verification (ICV)						
Was initial calibration performed using a minimum of five standard concentration levels (minimum of 6 levels for quadratic curves)?	Lowest standard at or below RL?	Yes		Yes		
Were the Average Relative Response Factors (ARRF) acceptable?	ARRF<or= specified limits (<15%D.)see SOP)	Yes		Yes		
Was a second-source ICV(s) analyzed (for Quadratic Curve)?	Required before sample analyses.	Yes		Yes		
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific	Yes		Yes		
Was Initial Calibration Blank (ICB) analyzed?	Required before sample analyses.	Yes		Yes		
Were the ICB results for all target analytes less than the limit of detection (LOD).	<LOD or < project/program specific limits	Yes		Yes		
III. Continuing Calibration Verification (CCV)						
Was an acceptable BFB tune check run at the beginning of every twelve hour shift?	Relative abundance criteria met?	Yes		Yes		
Was a CCV analyzed after every 12 hour tune check?	Required before sample analyses.	Yes		Yes		
Was a second CCV (CCV2) for compounds calibrated using quadratic curves analyzed after every 12 hour tune check?	Required before analyses of WI samples (above the inflection point of the curve).					
Were all target compound %Deviation or %Drift acceptable?	%D < 20% or project/program specific		No		No	
If necessary, were the results for outlying compounds qualified?		Yes		Yes		

IV. Blanks						
Was a Method Blank (MB) analyzed prior to analysis of samples?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MB results for all target analytes less than the limit of detection (LOD)?	*All target analytes <LOD or < project/program specific limits (<1/2 RL for DoD-QSM)	Yes		Yes		
If analytes were detected in the MB with no associated positives in the samples, no further action is needed. If the analyte detects in the MB were greater than the acceptance criteria and there were detects in the samples, was the data qualified.?						
V. Laboratory Control Spike (LCS)						
Was a LCS (and LCSD if needed) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the LCS (LCSD) recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.		No		No	
If applicable, were associated sample detects (and non-detects for low recoveries) qualified?		Yes		Yes		
Is the relative percent difference (RPD) for each analyte between the LCS and LSCD (if applicable) acceptable?	Default 20%, or see internally generated limits, or client specific limits.		No		No	
VI. Matrix Spike/Matrix Spike Duplicate (MS/MSD)						
Was a Martrix Spike (MS) and a Matrix Spike Duplicate (MSD) analyzed at the required frequency?	1 per 20 samples or project/program specific.	Yes		Yes		
Were the MS/MSD recoveries for all analytes within acceptance criteria?	Default 70-130%, or see internally generated limits, or project/program specified limits.		No		No	
Is the relative percent difference (RPD) for each analyte between the MS and MSD acceptable?	Default 20%, or see internally generated limits, or client specific limits.		No		No	
VII. Sample Analyses						
Are chromatogram characteristics, including peak shapes and areas, consistent with those of the CCV?		Yes		Yes		
Were surrogate recoveries for all samples and QC within acceptance criteria?	Default 70-130%, or see internally generated program limits, or client specified limits.	Yes		Yes		
If possible, were the affected samples reanalyzed?						
**Were reported sample results with failing surrogate recoveries qualified?						
Were all samples having analytes detected in amounts exceeding the calibration range diluted and reanalyzed? If not qualify (X).	Target upper middle range of calibration curve.	Yes		Yes		
Did all samples meet hold time and preservation criteria as defined by method/program?	H2O sample: pH < 2 = 14 days, pH >2 = 7 days. Soil samples: 14 days (other criteria may apply)	Yes		Yes		
Were all samples and QC injected within 12 hours of BFB tune check?		Yes		Yes		
Were internal standard recoveries acceptable relevant to associated ICAL?	Response = -50 to +200%; Ret. time = +/- 30 sec.	Yes		Yes		

VIII. Records and Reporting						
Is sequence file / injection log present in the data package?		Yes		Yes		
Were all data, calculations, and values verified in LIMS (including removal of non-detections) upon completion of data capture?		Yes		Yes		
Were manual integrations performed correctly?	Manual integration must be initialed, dated, and reason given, along with before & after chromatograms.	Yes		Yes		
Was the rational for the manual integration verified?		Yes		Yes		
Are reported results whose amounts exceeded the acceptance criteria flagged with an appropriate qualifier and, if needed, were any non-matrix related nonconformities documented in the NCR spreadsheet?		Yes		Yes		

ᵏNon-Applicable Yes/No Cells Are Left Blank*

# of Ampules/Units:	2	Comments:	Used for 8260 ICV/Spiking standard preparation.	

Standard ID #	Compound/Standard Name	Supplier/Manufacturer	Standard Part #	Standard Lot #
V0903	VOC 8260 Special Additions	SPEX CertiPrep	VO-CTWI-5	AA181024011
Concentration	Neat (% purity) or Solvent	Expiration Date	Date Received	Analyst
1,000 - 50,000 ug/mL	MeOH	04/22/2019	10/30/2018	RLD
# of Ampules/Units:	2	Comments:	Used for 8260 CCV/Calib. standard preparation.	

Standard ID #	Compound/Standard Name	Supplier/Manufacturer	Standard Part #	Standard Lot #
V0896	4-Bromofluorobenzene	Ultra Scientific	STS-110N	CM-3263A
Concentration	Neat (% purity) or Solvent	Expiration Date	Date Received	Analyst
2,000 ug/mL	MeOH	06/30/2020	10/15/2018	RLD
# of Ampules/Units:	4	Comments:	Used for 8260 BFB Std. and PVOC/GRO SSTD & ISTD/SSTD preparation.	

Standard ID #	Compound/Standard Name	Supplier/Manufacturer	Standard Part #	Standard Lot #
V0894	1,2-Dichlorobenzene-$_{d4}$	Ultra Scientific	STS-210-1	CM-4301A
Concentration	**Neat (% purity) or Solvent**	**Expiration Date**	**Date Received**	**Analyst**
2,000 ug/mL	MeOH	07/31/2021	09/19/2018	RLD
# of Ampules/Units:	4	Comments:	Used for GRO-8015 and SDWA 524.2 surrogate standard preparation.	

Standard ID #	Compound/Standard Name	Supplier/Manufacturer	Standard Part #	Standard Lot #
V0879	4-Bromofluorobenzene	Ultra Scientific	STS-110N	CM-3263
Concentration	**Neat (% purity) or Solvent**	**Expiration Date**	**Date Received**	**Analyst**
2,000 ug/mL	MeOH	07/31/2019	04/24/2018	RLD
# of Ampules/Units:	2	Comments:	Used for PVOC/8015 SSTD and ISTD/SSTD preparation.
