Memphis, TN 38114

Dear Mr. DeBack:

I wrote Mr. Clyde Hunt Jr. a letter dated May 8, 2003 pertaining to Bill Moyers Now TV series entitled "Kids and Chemicals-Facts of Law" which aired on 5/10/02. I am certain your office has a file copy. A copy was made for each RAB member.

I asked that EPA, ATSDR, CDC and any other applicable agency to comment on the questions I posed throughout the letter. As yet I have not received an answer. This letter was a result of a great deal of effort and time on my part. I regarded the information to be extremely important and for these reasons I am saddened and disappointed that your office has not seen fit to provide the answers to my questions. I am going to try one more time. Outlined below are the questions I would like you or somebody to address.

ATSDR/CDC should update the RAB on their approach to investigating toxin exposure in light of the Fallon, Nevada investigation?

Dr. Jackson looked at 125-130 different chemicals in blood and urine rather than what is in the air, water and food. What procedures are being used by ATSDR/CDC to carry out their tests?

Of the 3000 high production volume chemicals used in the USA only 43% have been minimally tested and only 10% have been thoroughly

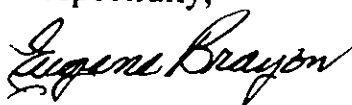

tested to examine their potential effects on children's health, and development. If this is true, what is being done about it?

There is a lot of information on thresholds but Dr. Needleman cannot say there is a low level and poses the question about combinations of chemicals at low levels. What is EPA's current position on this?

Has EPA and other responsible government agencies taken the fetus and time of vulnerability into consideration based on Dr. Peresa and Steingraber's findings?

I am still awaiting an EPA response and/or update on the scathing report on the Memphis Depot reported in [www Scoreboard org](http://www.Scoreboard.org). Please reply.

Respectfully,

A handwritten signature in cursive script that reads "Eugene Brayon".

Eugene Brayon
