**From:** Clayton Mokri
Tom Holmes

**Date:** July 8, 2025

**Re:** **Dunn Field West Round 2 Soil Sampling Memorandum**
**Defense Depot Memphis, Tennessee**

This *Dunn Field West Round 2 Soil Sampling Memorandum* (Rnd2 Memo) was prepared by HDR under Contract Number W91278-20-D-0024 W9127822F0208-0003, Confirmation Notice No. 4 for the United States Army Corps of Engineers (USACE), Mobile District. This Rnd2 Memo describes sampling activities, soil sample analytical results, and revised excavation limits for contaminated soil on Dunn Field West (DFW) at the former Defense Depot Memphis, Tennessee (DDMT). This Memo was prepared to address recommendations made in the *Dunn Field West Data Collection Memorandum* (DFW Memo; HDR, 2025) for the remedy cost estimate in the DFW Explanation of Significant Differences (ESD) currently in preparation.

## DFW DATA COLLECTION

The DFW Memo presented findings from an investigation conducted at DFW to further evaluate the extent of soil contamination for remedial action prior to property transfer. The investigation consisted of vegetation clearing, geophysical surveys (electromagnetic and electrical resistivity tomography), and soil sample collection from ten borings (SB-100 to SB-110) in October 2024. Soil samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polycyclic aromatic hydrocarbons (PAHs), metals, pesticides, and polychlorinated biphenyls (PCBs). Geophysical surveys identified minor metallic anomalies, and soil borings targeted these areas to delineate contamination extent, with samples collected up to 35 feet below ground surface (bgs) and screened for VOCs using a photoionization detector (PID).

Analytical results identified VOCs, SVOCs and/or PAHs exceeding Dunn Field Record of Decision (CH2MHILL, 2004) Remedial Goals (RGs) in 17 samples collected from eight borings. Chlorinated VOCs (e.g., vinyl chloride, cis-1,2-dichloroethene) and other VOCs (e.g., trimethylbenzene) were detected above RGs with benzo(a)pyrene (BaP) detected above RGs only in surface samples. Lead and chromium were detected in one sample (SB-109-0) above 20 times the 40 Code of Federal Regulations (CFR) 261.24 toxicity characteristic (TC), which indicates the potential for this soil to be characterized as hazardous waste if disposed. No significant metallic debris was identified during geophysical investigation or soil sampling.

Recommendations in the DFW Memo include additional soil sampling at 0 and 5 bgs for VOCs and SVOCs to refine excavation boundaries presented in the DFW Memo and for toxicity characteristic leaching procedure (TCLP) analysis to evaluate disposal requirements.

## ADDITIONAL SAMPLING

### Drilling and Sampling Methods

Prior to sampling, HDR marked the boring locations and coordinated utility clearance through Tennessee One Call. Boring location coordinates were obtained using a GPS receiver capable of submeter accuracy; the locations and total depths are listed on Table 1 and depicted on Figure 1.

Samples were collected at twelve locations (SB-111 through SB-122) by HDR on April 1, 2025 using a 2.25-inch diameter hand auger. SB-111 through SB-113 were advanced to 5.5 feet below ground surface (bgs) and SB-114 through SB-122 were advanced to 0.5 feet bgs.

An HDR field geologist classified soil cores for SB-111 through SB-113 per the Unified Soil Classification System (USCS), documenting lithological changes, relative moisture, and water-bearing zones. Soil cores were screened for VOCs using a PID. Boring logs are provided in Appendix A.

Two soil samples were collected from SB-111 through SB-113, at the ground surface (0-0.5 feet bgs) and from the subsurface (5-5.5 feet bgs). Surface soil samples (0-0.5 feet bgs) were collected from borings SB-114 through SB-122. Soil samples were collected from each boring with laboratory-supplied TerraCore™ sampling kits for VOCs and one 16-ounce amber glass jar. Samples were stored in a cooler with ice and shipped for overnight delivery via FedEx to CT Laboratories LLC (CTL) in Baraboo Wisconsin. The soil samples were analyzed for the following:

- VOCs by Environmental Protection Agency (EPA) Method 8260C;
- SVOCs by EPA Method 8270D; and/or
- Chromium and lead via TCLP by EPA Method 6010C

Following sampling, each boring was abandoned by filling with soil cuttings generated from the boring and lightly compacting the soil in place.

Sample SB-109-0 (collected in October 2024) was reanalyzed by Sterling Labs for TCLP analysis of lead and chromium. TCLP analysis was performed by CTL on nearby samples SB-113, SB-114, SB-115, and SB-118.

### Equipment Decontamination and Management of Investigation Derived Waste

The hand auger was decontaminated prior to collecting each soil sample by scrubbing with a brush in an Alconox solution to remove soil and contaminants, followed by a tap water rinse. The hand auger was then allowed to air-dry before collecting the next sample. At the end of the day, a rinse blank sample was collected by pouring ASTM Type II water over the cleaned auger

and capturing the runoff in laboratory-supplied bottles for analysis to verify decontamination effectiveness.

The waste generated during investigation activities was classified as either non-investigative waste or investigation-derived waste (IDW). Non-investigative waste, such as packaging materials, personal protective equipment, disposable sampling supplies and other inert refuse, was collected, containerized, and placed in the solid waste container at the HDR field office for disposal at a municipal landfill. The IDW consisted of soil cuttings from the borings and wastewater from equipment decontamination.

Approximately 10 gallons of IDW water was transferred to the aboveground storage tank (AST) on Dunn Field for later testing and offsite disposal. Soil cuttings were returned to each boring after sampling.

## SOIL SAMPLE RESULTS

### Field Observations

Subsurface lithology consisted of fine-grained soils (silts and clays) from the surface to 5.5 feet bgs, the maximum depth explored. PID measurements and field observations did not identify contaminated material.

### Data Quality Evaluation

Analytical data from the sampling event were reviewed by the HDR Project Chemist based on guidelines in *DDMT Uniform Federal Policy – Quality Assurance Project Plan* (HDR, 2018) and *Dunn Field West Data Collection Work Plan* (HDR, 2024a). The complete analytical results for field and quality control (QC) samples, including data quality evaluation (DQE) flags, for VOCs and SVOCs are presented in Appendix B, Tables B-1 through B-2. The laboratory analytical reports are included in Appendix C (electronic copies only).

The data validation and usability report is provided in Appendix D. Analytical results were reported using limits of quantitation (LOQs) and limits of detection (LODs). Results reported below the LOQ but above the LOD were flagged “J” and considered an estimated result (unless overridden by other QC flags).

Analytical data from the event met project data quality objectives (DQOs) and were determined to be sufficient to delineate soil contamination. Data usability for each analyte group is summarized below.

- **Calibration Issues:** Tetrahydrofuran in SB-112-5-DFW was qualified UJ due to low second source recovery. Hexachlorocyclopentadiene, benzidine, benzo(g,h,i)perylene (14 samples), and benzoic acid, 2,4-dinitrophenol, pentachlorophenol, and 3,3’-dichlorobenzidine (3 samples) were qualified UJ or J- due to continuing calibration exceedances.
- **Blank Contamination:** Di-n-butylphthalate (1 sample), toluene (4 samples), and naphthalene (3 samples) were qualified J+ due to method or rinse blank detections. TCLP chromium and lead were qualified J+ in most samples due to method and rinse

blank detections. Tetrahydrofuran and naphthalene in the rinse blank were also qualified J+ due to calibration blank detections.

- **Laboratory Control Spike (LCS) and Surrogates:** Benzidine and hexachlorocyclopentadiene in all soils were qualified UJ due to low LCS recoveries. Base-neutral analytes in two samples were qualified UJ or J- due to low surrogate recoveries.
- **MS/MSD:** In SB-113-0-DFW, cis-1,2-dichloroethene was qualified J+, tetrachloroethene and trichloroethene as J-, and naphthalene as J due to MS/MSD recovery issues. Seventeen additional analytes were qualified J- or UJ for the same reason.
- **Field Duplicates:** m,p-xylenes, o-xylene, total xylenes, tetrachloroethene, 2-methylnaphthalene, fluoranthene, and pyrene were qualified J due to high RPDs between field duplicates.

### Analytical Results

Analytes detected above the LOQ in soil samples are summarized in Tables 2 and 3. Table 4 includes the complete TCLP chromium and lead results. Table 2 presents VOCs, including primary CVOCs (carbon tetrachloride, chloroform, cis-1,2-dichloroethene, 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, tetrachloroethene (PCE), trichloroethene, trans-1,2-dichloroethene, and vinyl chloride) whether non-detect or detected above or below the LOQ and Other VOCs that are detected above the LOQ in at least one sample. RGs from the Dunn Field ROD, EPA Industrial RSLs, TC limits under 40 CFR 261.24 are included where applicable.

Volatile Organic Compounds (VOCs)

VOCs were analyzed in surface (0-0.5 feet bgs) and subsurface (5-5.5 feet bgs) samples from borings SB-111, SB-112, and SB-113. PCE was the only VOC detected above the loess-specific RG, present in both samples from SB-113. No VOCs exceeded EPA Industrial RSLs (Table 2)

Semi-Volatile Organic Compounds (SVOCs)

SVOCs, notably BaP, were detected above RGs and EPA Industrial RSLs in all surface soil samples (0-0.5 feet bgs). At 5 feet bgs, BaP exceeded both the RG and industrial RSL in SB-111 but was below RGs in SB-112 and SB-113 (Table 3).

TCLP Metals Analysis

TCLP analysis for lead and chromium was performed on samples SB-109, SB-113, SB-114, SB-115, and SB-118. Soluble lead or chromium were not detected above TC limits, indicating that the soil is unlikely to require hazardous waste transportation and disposal once excavated (Table 4).

## CONCLUSIONS

Results of the April 2025 Round 2 sample analyses require expansion of the DFW excavation boundaries shown in DFW Memo (HDR, 2025). The expanded excavation limits are shown on Figure 1.

TCLP analyses of lead and chromium indicate excavated soil is unlikely to require management as hazardous waste.

**Updated Proposed Excavation Areas**

- **Area A1:** Approximately 3,700 sq ft. Excavation to a depth of at least 5 ft bgs to address VOCs and SVOCs above RGs.
- **Area A2:** Approximately 4,630 sq ft. Excavation to 2 ft bgs is recommended to remove shallow soil with SVOCs above RGs.

Additional excavation, laterally and vertically, may be required confirmation sample analyses. The results of this excavation will be used to refine cost estimates for remedial action in the DFW ESD.

Notes:
1) Remediation Goals established in the Dunn Field Record of Decision (CH2MHILL, 2004)
2) Results above LSV or FDSV shown in **red bold**. Results above RSL in **black bold**.
3) Analytical results, whether non-detect or detected above or below the LOD,
RSL: USEPA industrial regional screening level with default parameters, 1x10-6
USEPA: United States Environmental Protection Agency
µg/kg: micrograms per kilogram
LOD: Level of Detection
LSV: Loess Specific Values
FDSV: Fluvial Deposit Specific Values.
- : Not Listed
ft bgs: feet below ground surface to top of the sa
TCLP: Toxicity Characteristic Leaching Procedure. Values which exceed 20 times (20x) the TCLP may be classified as hazardous waste per 40 CFR 261.24.
U: The analyte was not detected and was reported as less than the LOD; the LOD has been adjusted for any dilution or concentration of the sample.
J: The reported result was an estimated value with an unknown bias.
J+ The result was an estimated quantity and may be biased high.
J-: The result was an estimated quantity and may be biased low.
Method:
8260B: Volatile Organic Compounds

Notes:

1) Remediation Goals established in the Dunn Field Record of Decision (CH2MHILL, 2004)

2) Results above Remediation Goal shown in **red bold**. Results above RSL in **black bold**.

3) Analytical results, whether non-detect or detected above or below the LOD, are shown for analytes that are detected above the LOD in at least one sample.

RSL: USEPA industrial regional screening level with default parameters, 1x10-6 target cancer risk, and 0.1 noncancer target hazard quotient. November 2024

USEPA: United States Environmental Protection Agency

µg/kg: micrograms per kilogram

LOD: Level of Detection

- : Not Listed

ft bgs: feet below ground surface to top of the sample

DQE Flags:

U: The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.

J: The reported result was an estimated value with an unknown bias.

J+ The result was an estimated quantity, but the result may be biased high.

J-: The result was an estimated quantity, but the result may be biased low.

UJ: The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.

Method:

8270E: Semivolatile Organic Compounds

Notes:
µg/Kg: micrograms per kilogram
NE: Screening level not established
U: The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
UJ: The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
J: The reported result was an estimated value with an unknown bias.
J+ The result was an estimated quantity, but the result may be biased high.
J-: The result was an estimated quantity, but the result may be biased low.

Notes:

µg/Kg: micrograms per kilogram

NE: Screening level not established
U: The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.

UJ: The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.

J: The reported result was an estimated value with an unknown bias.

J+ The result was an estimated quantity, but the result may be biased high.

J-: The result was an estimated quantity, but the result may be biased low.

Notes:

µg/Kg: micrograms per kilogram

NE: Screening level not established
U: The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.

UJ: The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.

J: The reported result was an estimated value with an unknown bias.

J+ The result was an estimated quantity, but the result may be biased high.

J-: The result was an estimated quantity, but the result may be biased low.

RE: Memphis, TN DFW Soil Sampling
DDMT Env. Restoration, W9127823D0048

Dear Lynn Lutz:

Enclosed are the analytical reports for the Sterling Labs Work Order listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me.

Sincerely,

Olga Karplyuk
Project Manager
okarplyuk@TheSterlingLab.com
Approved: 3/21/2025 5:41:04PM

The contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety. Detection and Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable..

## Case Narrative

Work Order: O24J0276
The samples were received on 10/3/2024 10:35:00 AM. The temperature of the cooler(s) at receipt was:

| Cooler: | Temp C |
|---|---|
| Cooler 1 | 2.9 |
| Cooler 2 | 3.2 |
| Cooler 3 | 2.3 |
| Cooler 4 | 1.7 |

Sample 10 D (SB-108-25-DFW) & 11 H (SB-108-32-DFW) arrived with broken lids.

R1: This is a revised report. TCLP Lead and Chromium Analysis was added for sample O24J0276-12 per client's request.

**GC Semivolatiles**

8082_DoD
S24J0308-CCV1/CCV2: The surrogate recovery of Decachlorobiphenyl is above control criteria in the sequence CCVs. Although there is a possible high bias, there were not any detections in the samples.

S24J0364-CCV1/CCV2: The surrogate recovery of Decachlorobiphenyl is above control criteria in the sequence CCVs. Although there is a possible high bias, there were not any detections in the samples.

509 N. 3rd Avenue Des Plaines, IL 60016-1162 P 847.967.6666 800.246.0663 F 847.967.6735 www.thesterlinglab.com

**Inorganics, metals**

6010

The metals Blank Spike (BS) prepared for batch (B24J0437) had recovery outside of control limits for Se, samples are non-detect.
The Method Blank prepared for batch (B24J0437) had Calcium, Iron, Potassium and detection in the blank. Reported batch samples are 10 times the blank level, so no significant contribution was made on any of the samples.
The metals Matrix Spike/Matrix Spike Duplicate (MS/MSD) prepared from sample SB-108-32-DFW(024J0276-11) had the following outside control limits:
AL: 3090%/8570% (MS/MSD) recovery
Sb: 0%/0% (MS/MSD) recovery
Ba: 117%/41% (MS/MSD) recovery
Ca: 60%/63% (MS/MSD) recovery
Cr: 114% (MSD) recovery
Fe: -562%/-229% (MS/MSD) recovery
Pb: 125%/62% (MS/MSD) recovery
Mn: 516%/-479% (MS/MSD) recovery
Se: 76%/72% (MS/MSD) recovery

S24K0300-CRL2 low level cal check was outside of control for potassium at 41% (80-120) associated samples were re-analyzed.

S24K0300-CCB3 had Magnesium detection in the continuing calibration blank( CCB). all reported samples are on column results reported greater than 10x

**GC Semivolatiles**

8081 DoD
(Soil)
S24J0638-CCV1/CCV4/CCV7: The surrogate recovery of Decachlorobiphenyl is above control criteria on the [2C] column in the sequence CCVs, causing high recovery on this column in all batch QC and samples. The recovery of this compound was within control on the primary column.

(Water)
S24K0128-CCV1/CCV7: The surrogate recovery of Decachlorobiphenyl is above control criteria on the [2C] column in the sequence CCVs, causing high recovery on this column in batch QC and samples. The recovery of this compound was within control on the primary column.

B24J0392-BS3/BSD3: The recovery of Chlordane is above control criteria. The sample did not have a detection for this compound

S24K0128-CCV3/CCV9: The Toxaphene CCVs were acctidentally made 10x lower than standard and were not within the instrument calibration. The sample was re-extracted and Toxaphene was analyzed outside of the recommended hold time.

S24K0020-CCV1/CCV4/CCV7: The surrogate recovery of Decachlorobiphenyl is above control criteria on the [2C] column in the sequence CCVs, causing high recovery on this column in all batch QC and samples. The recovery of this compound was within control on the primary column.

**GCMS Semivolatiles**

8270 SIM DoD
B24J0426-BLK1: There are low detections in the method blank for Benzo(b)fluoranthene, Fluoranthene, Naphthalene, and Pyrene. The detections in the sample are more than 10x the detections in the blank.

8270 SVOC DoD
B24J0296-MSD1: The RPD between MS and MSD was outside control limits for multiple compounds.

B24J0789-BLK1: There is a low detection in the method blank for Bis(2-ethylhexyl)phthalate. There were not any detections in the associtaed sample for this compound.

B24J0295-BSD1: The RPD between BS and BSD was above the control limit (20%) for Benzoic acid.

509 N. 3rd Avenue Des Plaines, IL 60016-1162 P 847.967.6666 800.246.0663 F 847.967.6735 www.thesterlinglab.com

**GC-MS Volatiles**

8260B_VOC

O24J0232-03 was utilized for MS/MSD purposes. There were outliers in the B24J0265 MS/MSD and the affected target compounds in the source sample are qualified with a “J1”. As all other batch QC is acceptable, this is most likely due to a sample matrix effect.

O24J0276-15: The result for Vinyl chloride was over calibration when alayzed by 8260 DoD Na2HSO4. The sample was re-analyzed at a 50x dilution by 8260 DoD MeOH, however, Vinyl chloride was not detected. The sample was expired and could not be re-analyzed at a lower dilution. The primary result is reported over calibration and qualified with an "E".

The work order had one or more surrogate recoveries outside the laboratory control limits as listed with the outliers following. The sample Hold time passed before a re-analysis could be performed.

O24J0276-05: Toluene-d8 at 126%

O24J0276-13: 4-Bromofluorobenzene at 120%

O24J0276-14: Toluene-d8 at 136%

O24J0276-14: 1,2-Dichlorobenzene-d4 at 150%

S24J0371-CCV1 had elevated recoveries for 1,4-Dioxane at 124%, Bromomethane at 126%, and Vinyl acetate at 121%. The compounds were non-detected so no significant effect on the reported data and affected samples are “Q” qualified.

B24J0623-BS1 had elevated recoveries for 1,2,3-Trichlorobenzene at 135%, n-Butylbenzene at 135%, Naphthalene at 132%, and sec-Butylbenzene at 127%. The compounds were non-detected or below the reporting limit, so no significant effect on the reported data and affected samples are “Q” qualified.

O24J0276-05 n-Butylbenzene and sec-Butylbenzene have detects and samples hold time passed before a re-analysis could be performed.

O24J0276-11 was used for the batch MS/MSD that had outliers in the recoveries. The affected target compounds are “J1” qualified.

S24J0540-CCV1 had outlying recoveries for 1,2,3-Trichlorobenzene at 125%, 1,2,4-Trichlorobenzene at 121%, 2-Chloroethyl vinyl ether at 74%, Acrolein at 60%, Naphthalene at 123%, and Vinyl acetate at 124%. The sample hold time had passed before a re-analysis could be performed and affected compounds are “Q” qualified.

B24J0919-BS1 and BSD1 had elevated recoveries for 1,2,3-Trichlorobenzene at 132 and 131%. The compounds were non-detected or below the reporting limit, so no significant effect on the reported data and affected samples are “Q” qualified.

S24J0372-CCV1 had elevated recoveries for 1,2,3-Trichlorobenzene at 126% and Naphthalene at 123%. The affected samples are “Q” qualified and the hold time had passed before a re-analysis could be performed.

S24J0372-HCV1 had a low recovery for Carbon disulfide at 39%. The samples hold time had passed before a re-analysis could be performed.

B24J0623-BS1 had an elevated recovery for 1,2,3-Trichlorobenzene at 135% with an elevated RPD for 1-Propanol in the BSD1 at 23%. The compounds were non-detected, so no significant effect on the reported data and affected samples are “Q” qualified.

O24J0343-07 was used for the batch MS/MSD that had outliers in the spike recoveries and RPD’s. The affected target compounds are “J1” qualified.

8260 Library Search Data:

O24J0276: Library search data was supervisor reviewed for correctness of identifications. In some instances, peaks were reported that were baseline noise as well as peaks that are typically due to column bleed. In all cases, in the report these were set to non-reportable, though would appear in the raw data.

## Uncertified Analyses

Sterling Labs O'Hare location does not hold certification for the following analytes under the program listed on the cover page of this report.

| Analyte | CAS # |
|---|---|
| **SM2540G** | |
| Total Solids | Moist |
| **SW8260B** | |
| No TICs found | |
| No TICs found | |
| **SW8260D** | |
| Ethyl ether | 60-29-7 |
| 1,2-Dichloroethene, Total | 540-59-0 |
| 4-Methyl-2-pentanone | 108-10-1 |

sterling labs - O'Hare Location
509 N. 3rd Avenue Des Plaines, IL 60016-1162 P 847.967.6666 800.246.0663 F 847.967.6735 www.thesterlinglab.com

## Qualifiers and Definitions

| Item | Description |
|---|---|
| 2-CVE | The sample was preserved with HCl according to Method requirements. Acidification is inappropriate for 2-Chloroethyl vinyl ether as the analyte decomposes in acidic conditions. |
| B | Analyte was present in the method blank. |
| D | Data reported from a dilution |
| E | Reported concentrations are estimated values as the result exceeded the calibration range. |
| H | Sample prepared and/ or analyzed past recommended holdtime. |
| J | The reported result is an estimated value. |
| J1 | The sample was utilized for MS/MSD or Duplicate purposes. For this compound, the recovery and/or RPD fell outside control criteria. |
| N | Tentatively Identified Compound |
| P | The quality control sample %RPD is above the laboratory control limit. |
| Q | One or more quality control results were outside of the acceptance limits (e.g. LCS recovery, surrogate spike recovery, or CCV recovery). |
| S | The quality control sample recovery is outside of the laboratory control limits. |
| S1 | The percent recovery is above the limits (e.g. LCS recovery or surrogate spike recovery), but the analyte was not detected in the sample. Data is acceptable. |
| U | Analyte included in the analysis, but not detected |
| X | Sample was acidified as a preservative that breaks down 2-CVE. |
| %Rec | Percent Recovery |

**Possible Hazard Identification:**
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable

**Sample Disposal**

☐ Return to Client ☑ Disposal by Lab

**Special Instructions/QC Requirements & Comments:** **Provide metals results in data package separate from dioxins/furans**

# *Case Narrative*

**Client:** HDR Inc., Englewood, CO
**Project:** DDMT-DFW, Memphis, TN
**Sample Receipt Date(s):** 04/04/2025
**SDG #: 194024**

Seventeen solid and one aqueous (rinse blank) samples were analyzed for a variety on analyses, including TCLP metals (Cr, Pb), SVOC's and VOCs + TICs. A trip blank was also included for VOC analysis. The assigned sample ID numbers, date sampled, and date received are indicated in the attached Project Summary. The samples were received intact and at a temperature within method specified acceptance limits. Any exceptions are noted below. The analyses were performed following QSM 5.4 requirements.

Manual integrations may have been performed on the data provided with this package. If manual integrations were performed, a Reason # (s) was included on the raw data that corresponds to the "Index Key for Manual Integration Rationale." The raw data includes a "Before" and "After" manual integration illustration. The manual integrations were initialed and dated by the analyst, as well as, by the person reviewing the data.

**Sample Analysis and Quality Control**

***Volatile Analysis:***

The samples were analyzed using US EPA Method 8260C (VOCs). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8260 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1's were either not detected or did not meet identification criteria so they were reported as non-detects.

Continuing Calibration Verification (CCV) compounds are calibrated using either response factor (with acceptance criteria <20%deviation, or <50% deviation for CCVF) or quadratic regression (with acceptance criteria <20% drift, or <50% drift for CCVF). Non-conformances were qualified with a "Z" flag unless otherwise noted. Response factors are provided as guidance only and are not intended to be a requirement. Data is not qualified based on RRF values.

Some samples may have been analyzed and/or reanalyzed diluted to obtain results for all target compounds within the calibration range of the instrument. Over-range compounds for low-level soil analysis were re-analyzed from methanol extracts because dilution is not possible by low-level soil purge procedure. In the case of this project, to avoid potential instrument contamination, methanol extracts were analyzed on all samples.

**VOC (8260C) Solid Methanol-Extract Analyses**

Analytical Run # 290598

CCV1 and CCV2 had low recoveries outside of specified criteria for tetrahydrofuran. CCVF2 had a low recovery outside of specified criteria for vinyl acetate and high recoveries bromomethane and chloroethane. The associated data were qualified with a "Z" flag for these analytes.

Sample #'s 1568822,1568823, 1588828 (+ the matrix spikes), 1568830 & 1568846 had low Internal Standard (ISTD) responses. These sample were reanalyzed.

The Matrix Spike (MS), performed on sample # 1568828, had a high recovery for trichlorotrifluoromethane and low recoveries 1,1-dichloroethene, 1,2,3-trichloropropane, bromobenzene, methylene chloride and naphthalene. The parent sample results for these compounds were qualified with "M" flags. The MS/MSD had RPD exceedance for 16 analytes. The parent sample results for these analytes were qualified with "Y" flags.

The Matrix Spike had a low surrogate recovery for bromofluorobenzene and the surrogate result was qualified with an "S" flag.

Sample # 1568821 had more than a 1:1 ratio of soil to methanol. The low-level bisulfite-preserved vial also had greater than a 1:1 ratio of soil to water. This sample could not be analyzed by the low-level purge technique due to too much soil in the vials.

**VOC (8260C) Solid Low-level Analyses**

Analytical Run # 290584 / 190583 / 290582

The Matrix Spike (MS) and Matrix Spike Duplicate (MSD), performed on sample # 1568828, had high recoveries for 19 and 21 analytes, respectively, and low recoveries for trichloroethene and tetrachloroethene. The parent sample results for these compounds were qualified with "M" flags. The MS/MSD had RPD exceedance for five analytes. The parent sample results for these analytes were qualified with "Y" flags.

The Matrix Spike had a low surrogate recovery for bromofluorobenzene and the surrogate result was qualified with an "S" flag.

Sample # 1568821 could not be analyzed by the low-level purge technique due to too much soil in the vials.

The Tentatively Identified Compounds (TICs) were generated from low-level analyses except for sample #1568821.

**VOC (8260C) Aqueous Low-level Analyses**

Chloromethane was detected in the Initial Calibration Blank (ICB) for calibration curve LW041325.

Analytical Run # 290576 / 290575 / 290574

All analytical results for this run met the method/project specified quality control criteria.

***Semi-Volatile Analysis:***

The samples were analyzed using US EPA Method 8270D (SVOCs). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Surrogate Recovery Data
Matrix Spike/Matrix Spike Duplicate Recovery Data
Laboratory Control Spike Data
Method Blank Data
Initial Calibration Summary
Calibration Check Summary
Analysis Run Log
Prep Log
Chromatograms

All analysis results met the method specified quality control criteria with the following exceptions:

Detailed reports were provided for the 8270 data for all detected compounds, as well as, for those compounds manually integrated (if applicable). Compounds not reported on the form 1's were either not detected or did not meet identification criteria so they were reported as non-detects.

**SVOC (8270D) Solid Analyses**

Analytical Run # 290730

Ending CCV, 2CCV406, had low responses for hexachlorocyclopentadiene, benzidine, and benzo(g,h,i)perylene. These analytes were qualified with a "Z" flag in the associated samples. Initial CCV, 2CCV407, had high responses for benzoic acid, 2,4-dinitrophenol, pentachlorophenol, and 3,3'-dichlorobenzidine. These four analytes were not reported from the dilutions associated with this CCV. Initial CCV, 2CCV409, had two analytes with high responses (benzoic acid, pentachlorophenol) and four analytes with low responses (benzidine, indeno(1,2,3-cd)pyrene, dibenzo(a,h)anthracene, benzo(g,h,i)perylene). These analytes were not reported from the dilutions associated with this CCV. Ending CCV, 2CCV410, had a low response benzo(g,h,i)perylene. This analyte was not reported from the dilutions associated with this CCV.

The Laboratory Control Spike (LCS) had a low recovery for hexachlorocyclopentadiene. This analyte was qualified with a "Q" flag in the associated samples. The analyte is a known problematic compound subject to photo and thermal degradation.

The Matrix Spike (MS) and Matrix Spike Duplicate (MSD), performed on sample # 1568828, had low recoveries for 17 and 14 analytes, respectively. The parent results for these analytes were qualified with "M" flags. The MS/MSD had RPD exceedances for 20 analytes. The parent results for these analytes were qualified with "Y" flags.

Undiluted sample #'s 1568822 and 1568846 had low areas of the sixth internal standard, perylene-d12. These samples were reanalyzed at 1:10 and 1:5 dilutions, respectively. The internal standard areas for both

dilutions were acceptable and the analytes associated with the sixth internal standard were reported from these dilutions. Sample # 1568846 was diluted due to a low internal standard area and did not have any analyte recoveries greater than the RL. These results were qualified with a "V" flag.

Sample # 1568822 had low recoveries for four surrogates. Sample # 1568834 had low recoveries for three surrogates. Surrogate results with low recoveries were qualified with an "S" flag.

**SVOC (8270D) Aqueous Analyses**

Analytical Run # 290647

Di-n-butylphthalate was detected in the Method Blank (MB) at a concentration greater than the detection limit but less than one-half the reporting limit. Sample results for this analyte that were less than ten times the MB results were qualified with a "B" flag

The LCS/LCSD had RPD exceedances for benzidine, benzoic acid, and pyridine. These analytes were qualified with a "Y" flag in the associated sample results.

***Metals Analysis:***

The samples were analyzed using US EPA Method 6010C (ICP metals). All samples were analyzed within the holding time. The following summaries of quality control procedures are included:

Initial and Continuing Calibration Verification
Blanks Summary
ICP Interference Check Data
Spike Sample Recovery
Duplicates Data
Laboratory Control Sample Data
Analysis Run Log

All analysis results met the method specified quality control criteria with the following exceptions:

Continuing Calibration Verification (CCV) standards were analyzed at two levels (CCV1 & CCV2) with potentially differing wavelengths. Data associated with CCV's were evaluated based on the concentration of the element in the samples and compared to the appropriate CCV level/wavelength.

**ICP (6010C) Metals Aqueous (TCLP) Analyses**

Analytical Run # 290687

The samples were only analyzed for chromium and lead.

Chromium and lead were detected in the Method Blank (MB) at concentrations greater than the detection limit but less than one-half the reporting limit. Sample results for these analytes that were less than ten times the MB results were qualified with a "B" flag

## Data Qualifiers

| Code | Description |
|---|---|
| A | Analyte averaged calibration criteria within acceptable limits. |
| B | Analyte detected in associated Method Blank. |
| C | Toxicity present in BOD sample. |
| D | Diluted Out. |
| E | Safe, No Total Coliform detected. |
| F | Unsafe, Total Coliform detected, no E. Coli detected. |
| G | Unsafe, Total Coliform detected and E. Coli detected. |
| H | Holding time exceeded. |
| J | Estimated value. |
| L | Significant peaks were detected outside the chromatographic window. |
| M | Matrix spike and/or Matrix Spike Duplicate recovery outside acceptance limits. |
| N | Insufficient BOD oxygen depletion. |
| O | Complete BOD oxygen depletion. |
| P | Concentration of analyte differs more than 40% between primary and confirmation analysis. |
| Q | Laboratory Control Sample outside acceptance limits. |
| R | See Narrative at end of report. |
| S | Surrogate standard recovery outside acceptance limits due to apparent matrix effects. |
| T | Sample received with improper preservation or temperature. |
| U | Analyte concentration was not above the detection level. |
| V | Raised Quantitation or Reporting Limit due to limited sample amount or dilution for matrix background interference. |
| W | Sample amount received was below program minimum. |
| X | Analyte exceeded calibration range. |
| Y | Replicate/Duplicate precision outside acceptance limits. |
| Z | Calibration criteria exceeded. |

CT LABORATORIES

delivering more than data from your environmental analyses

## MANUAL INTEGRATION REASON CODES

CTLaboratories has identified four general cases with valid reasons supporting the use of manual integration techniques. These codes are used on chromatograms in this data package to document the reasons for manual integrations per CTLaboratories' SOP SS-10 current revision.

**#1**: **Data system failed to select the correct peak or missed the peak entirely.**
In some cases the chromatography system selects and integrates the "wrong peak". In this case the analyst must correct the selection and force the system to integrate the proper peak. In other instances the system may miss the peak completely. In this case the analyst manually integrated the peak

**#2**: **Data System Splits the Peak Incorrectly or Integrates a False Peak as a Rider Peak.**
This phenomenon is common at low concentrations where the signal to noise ratio is low. A single compound (peak) is incorrectly split into multiple peaks or integrated as a main peak with one or more rider peaks resulting in low or high area counts for the target compound.

**#3: Improperly Integrated Isomers and/or coeluting compounds.**
For when the system fails to distinguish coeluting compounds and or isomers. The integration areas and concentrations may be inaccurate, and they must be corrected by manual integration. Prime examples are compounds that are unresolved and integrated improperly when present at low concentrations in standards or samples.

**#4: System Established Incorrect Baseline.**
There are numerous situations in chromatography where the system establishes the baseline incorrectly. Some baseline errors will be obvious to the analyst and may be corrected via manual procedures.

**#5: Miscellaneous.**
Some situations involving integration errors may require in-depth review and technical judgment. These cases should be brought to the attention of the group supervisor. If the form of manual integration is not clearly covered by these four cases, then review and approval by the group supervisor or the *QA/QC* Supervisor will be required.
