RE: **ADEM Review and Concurrence:** *Final Site Investigation Report and Decision Document for the Ground Scar South of the Autocraft Shop, Parcel 157(7)* dated January 2002, Fort McClellan, Calhoun County, Alabama

Dear Mr. Levy:

The Alabama Department of Environmental Management (ADEM or the Department) has reviewed the subject documents entitled *Final Site Investigation Report and Decision Document for the Ground Scar South of the Autocraft Shop, Parcel 157(7)* dated January 2002 for Fort McClellan.

The subject documents were discussed during the Base Realignment and Closure Team (BCT) on-board review meeting on May 10, 2001. During the BCT on-board review meeting, the Department provided its comments on both documents in an interactive manner such that the Army and BCT stakeholders could jointly resolve the Department's comments. The Department's comments are noted in the documented minutes of this meeting.

An overview of the discussion that took place during the May on-board-review meeting is presented below. The following is a paraphrased narrative of the meeting minutes issued by IT Corporation on May 10, 2001:

Ground Scar South of the Autocraft Shop: Parcel 157(7)- This site is projected for passive recreation reuse. The analytical data were screened against residential human health site specific screening levels (SSSLs) to evaluate the site for possible unrestricted future use. The metals that exceeded SSSLs in site media were below their respective background values. Polynuclear aromatic hydrocarbon (PAH) compounds were detected in one surface soil sample at concentrations exceeding SSSLs but below PAH background values. Volatile organic compound (VOC) results in site media were below SSSLs. The metals that exceeded ecological screening values (ESVs) were below their respective background concentrations or within the range of background values, with the exceptions of beryllium and selenium in surface soil which were slightly above the ESVs and exceeded their respective ranges of background results. PAH compounds were detected in one surface soil sample at concentrations exceeding ESVs but below PAH background values. VOC results were below ESVs. The BCT recommended that "No Further Action (NFA) with Unrestricted Use" is appropriate for this site.

Additionally, this site was discussed during the December 2001 BCT meeting. During that meeting, the BCT agreed that IT Corporation would revise the Site Investigation Report to include additional language to support risk management decisions, as requested by ADEM. In addition, the Decision Document for Parcel 157(7) was revised. As discussed in the meetings and as presented in the Final Site Investigation Report and accompanying Decision Document, it appears that this parcel does not pose a substantial risk to potential human and ecological receptors. Thus, the Department concurs with the BCT's recommendation that this site warrants no further action and an unrestricted use designation.

For any questions or concerns regarding this matter please contact Mr. Philip Stroud at 334-270-5646 or via email at pns@adem.state.al.us.

SUBJ: Site Investigation Report for the Ground Scar South of the Autocraft Shop, Parcel 157(7)
Fort McClellan

Dear Mr. Levy:

The Environmental Protection Agency (EPA) has reviewed the subject document. Based upon the information provided to EPA and as agreed upon in the May 10, 2001, On Board Review, EPA agrees with and approves the subject document. Thank you for your cooperation. If you have any questions, please call me at (404) 562-8549.

Sincerely,
