Mr. Bert Broome
Advanced Disposal
1319 No Business Creek Rd
Ragland, Alabama 35131

RE: Waste Certification
Non-hazardous soils and debris/trash
Stockpiles A1, A3, B21, D16, E13, E14, E15, E20, F14, F16, F17, & F22

Dear Mr. Broome:

The Alabama Department of Environmental Management has reviewed your waste certification received on 11/5/2015 and has assigned a Certification Number for this waste as shown below. **Any new generation of wastes must be tested and analysis submitted to the Department for review and approval prior to disposal.**

Waste Profile #: 160337
Certification #: SW-013118-0034
Expiration Date of Certification: 1/31/2018

McClellan Development Authority
4975 Bains Gap Road
Anniston, Alabama 36205

In your certification you requested one or more landfills be approved to receive your waste. Based on our review of the waste and the landfills requested, the waste is approved for disposal in the following landfills:

Advanced Disposal Cedar Hill Landfill

58-01

You should provide this approval letter to the landfill(s) listed above and contact the landfill to determine any special handling requirements for this waste prior to delivery to the landfill. According to ADEM regulations, the landfill may not receive this waste unless it has received a waste certification approval. For waste generated on a routine basis (not a one-time occurrence), another written certification for this waste stream should be submitted to ADEM prior to the expiration date listed above or at any time the process producing the waste changes. Each submittal should include a completed Solid Waste Profile Sheet, any supporting documentation including current analytical, and the appropriate fee. Current analytical consists of analysis performed within the past six months.

If at any time before the expiration date of this certification, new analysis of the waste is performed, the new results will supersede any prior analysis from the time the samples are taken. If the new analysis indicates the waste is still non-hazardous, the waste may continue to be disposed of at the landfill listed above until the expiration date of this certification. If the new analysis indicates the waste is hazardous, this certification is revoked. Each time new analysis is performed on the waste, copies of the analytical results should be provided to ADEM and the landfill until this certification expires. The generator should not dispose of the waste prior to the receipt and review of the sampling results. Furthermore, this approval letter does not exempt McClellan Development Authority from complying with all applicable requirements of the ADEM Administrative Code. If you have any questions concerning this approval or the approval process, please contact Ms. Blake B. Pruitt at 334-271-7756.

Sincerely,

Ronald T. Shell, Chief
Environmental Services Branch

Blake/Mike,

Good evening. I hope this finds you both well. I have forwarded the second set of analytical results for the Ft McClellan, McClellan Development Authority (MDA), Matrix Environmental, Baby Bains Gap Road Ranges (BBGRR) project under waste profile approval number 160337. The results are for stockpiles A5, B4, B17, B18, B19, C4, E16 and H3. Each stockpile represents app 300 CY of material. Please review, approve for disposal and email me the approval with CC to all on this email. If there are any questions please let us know. Have a blessed week.

Thank you,
