**Re: MEC Safety Support Letter Report, Response Event 4, Choccolocco Corridor Ranges, Environmental Remediation Services at Four Sites, Fort McClellan, Anniston, AL
Contract: W912DY-10-D-0023, Task Order No. CK01
HGL Project Number: H10501**

Dear Ms. Shirley:

HydroGeoLogic, Inc. (HGL) is pleased to submit this letter report documenting the findings for the fourth Munitions and Explosives of Concern (MEC) Safety Support response event at the Choccolocco Corridor Ranges site for the above-referenced project. This documentation supports Project Milestone 116.04 as described in the PMP/QASP and project schedule, and will serve as backup for invoicing purposes.

Activities and Operations Performed

As stated in the third MEC Safety Support letter, HGL's SUXOS and the SSHO assigned to the Fort McClellan project determined that a UXO team should be present for construction support during excavation of the remaining plunge pool in the Choccolocco Corridor Ranges due to additional munitions debris observed at the proposed pool location.

On June 27, 2016, HGL Mobilized a UXO Technician III and a UXO Technician II to the project site to observe the excavations. Additional expended slap flare components and an expended 40mm cartridge case were found during the construction of additional plunge pools (see Attachment 1 Photographs and attached Figure). Activities were halted for each discovery, and personnel moved out of the area while the UXO staff recovered the items. The UXO personnel conducted independent 100% inspections of each item in accordance with EM 385-1-97 and the MEC Safety Support Work Plan, and all were determined to be Material Documented as Safe (MDAS). The UXO staff demobilized on July 1, 2016.

MEC and MC Removal Action/Remedial Action Results

The UXO staff placed the MDAS in the drum with a numbered seal and locked it inside the conex at the project office location. Upon completion of field construction activities at Fort McClellan, the SUXOS and UXOQCS will mobilize to the site to prepare a chain of custody and DD Form 1348-1a certifying and verifying all items, and any future finds as MDAS. The MDAS drum will then be manifested and shipped to our MDAS vendor Demil Metals for final disposition and smelting. Disposition documentation, including chain of custody, DD Form 1348-1a and the letter certifying final disposition will be provided at that time.

QC Activities and Results

Independent inspections were conducted of the items. Final QC verification will be conducted prior to shipment.

QA Activities and Results

Not applicable for this response action.

MC Sampling Activities and Results

Not applicable for this response action.

Exposure Data

Hours worked: 48 hours

Lost workday accidents: 0

Lost workdays due to on-the-job accidents: 0

Property damage accidents with property loss value \$2000 or greater: 0

Please call or email me at (210) 477-2215, dreasons@hgl.com should you have any questions or comments concerning this document.

Sincerely,

David S. Reasons, PMP
Project Manager
