¹ This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.

B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND: Review of aerial photography appeared to suggest a small swale or stream feature might exist across the southern portion of the property. Field review of the parcel determined that the feature corresponds to an area where concentrated stormwater flows across the property from a stormwater drainage outfall that discharges onto the property from across Grayson Valley Parkway; however, the feature does not have the wetland soils, vegetation, or hydrology required to constitute a wetland, nor does it exhibit the bed and bank or ordinary high water mark features required to constitute a tributary/stream. Based on review of available desktop resources including Web Soil Survey mapping, USGS topographic mapping, aerial photography, and current site-specific photos in conjunction with field verification, it has been determined the 7.8-acre JD review area consists entirely of upland/non-wetland, dry lands. Field verification also determined the JD review area lacks any streams or tributary features.
