

CONTRACTING OPPORTUNITIES WITH THE US ARMY CORPS OF ENGINEERS IN LATIN AMERICA

The United States Army Corps of Engineers (USACE) works with partner nations in the region on engineering efforts and has future requirements in South America and in Panama for construction and maintenance. USACE is seeking contractors with experience in design, construction and repair of facilities, utilities, and infrastructure; and in ongoing maintenance of administrative and laboratory facilities.

Industry Days are being planned throughout the region to share information on these future requirements and on how to submit a proposal. Interested contractors may also contact Claudia Montero at claudia.m.montero@usace.army.mil for additional information.

Contractors are encouraged to register in advance in the systems listed on this page to ensure that they can download solicitations when they become available in the fall of 2021. Solicitations will be available only on <https://sam.gov>.
